the health board officers on in their work and commended their efforts. Yet, we are asked to believe that these same health board officials find three months old, and older, unrefrigerated Chinese eggs, sound, healthful and wholesome food; while the same public develops a desire and demand for *stale* foreign eggs. Bret Harte said:

"Which I wish to remark—
And my language is plain,—
That for ways that are dark
And for tricks that are vain,
The heathen Chinee is peculiar."
And it is evident that there are others!

* * *

The Progressive Poultry Journal is boosting "Girls' Poultry Clubs" and offers free space to breeders who will donate sittings from standard-bred stock to members of Girls' Clubs. Good work.

* * *

The American Buff Wyandotte Club apears to be a wide awake specialty organization and it represents a very excellent variety. We have kept Buff 'Dottes for a number of years now (never so few as a present when we only have a single pen), and we just won't give them up, though we have more varieties now than we ought to have. Secretary Willmarth sends us a copy of the Club's "Official Bulletin," which publishes Buff Wyandotte news and is self supporting through advertisements of members, and says: "Was interested in your notes for March relative to A. P. A. Bulletin and agree that the A. P. A. should certainly give us the news. Am enclosing a little paper put out by this club which in my humble opinion is ahead of the A. P. A. Bulletin. This bulletin is published by the club, not by an individual. I think A. P. A. Bulletin could be made self supporting by accepting advertisements from members and then giving us the news. A little investigation of American Kennel Club methods of publishing an official organ would be a good thing for the A. P. A. The present methods of the A. P. A. make somewhat of a joke of the official bulletin. I hope your notes will wake some of them up."

Hope so too, but it may be that this is a case where only the clarion notes of Gabriel's trumpet will result in breaking the long, long rest.

* * *

D. Lincoln Orr, Orr's Mills, N. Y., is now getting busy organizing an American White Faverolle Club. He wants to know whether the breeders shall work for clean legs or partially feathered legs in this bewhiskered variety. We admire "Link's" activity and hustle, but sometimes we wish he would get married, settle down and keep out of mischief. We already belong to more organizations than we have any time for, or can afford, and we "balk" right here and now; even if we are beginning to like White Faverolles. We join no more associations unless it be as an honorary and non-assessable member. Nevertheless, we should prefer the White Faverolles with abundant whiskers and clean shanks.

* * *

Defiance Poultry and Pet Stock Association, Defiance, Ohio, has passed a resolution, and forwarded same to Congress, asking that more humane treatment be accorded poultry in the shipping and slaughtering and urging state and national legislation; alleging that market poultry is subjected to much cruelty in cooping and in rough handling during shipping. That there is room for improvement in shipping coops and particularly in the handling of poultry, there is no doubt. When it comes to recommending feeding enroute, it should only be practiced on long shipments and then only according to instructions of shipper, with, in some cases, food supplied by the shipper. We wouldn't want the average express handler to feed poultry for us and would prefer to have the birds fast a day or so. The only humane way to kill poultry is to have them properly stuck and dry-picked by a skilled picker. To us, there does not seem to be any room for maudlin sentiment in the matter of slaughtering. Any killing is bound to be cruel. The only way is to kill quickly with a prompt stick in the brain which, following immediately after a skillful and quick cut of the big vein made through the mouth, ends pain and actually kills the fowl long before muscular movement ceases. The bleeding must and should come first to make the meat fit and make picking easy. With a sharp knife in the hands of a skilled operator, all suffering is reduced to the minimum. The method has been demonstrated before agents of the S. P. C. A., who have pronounced in favor of it. We have, personally, demonstrated the proper method of killing and dry picking from the Atlantic Coast to the foothills of the Ozarks, and we know it is good. The U. S. Department of Agriculture has issued bulletins illustrating and describing, as well as recommending, the operation of bleeding, sticking and dry-picking of poultry, and there is no excuse for anyone who slaughters poultry failing to learn this method.

* * *

On March 7th, by courtesy of E. O. Damon, successful soft roaster grower of North Hanover, Mass., our family dined on fine fat capon. (South Shore soft roaster) just 26 weeks old. Mr. Damon apologized for the bird when he sent it, saying it was not up to his usual high standard of quality. The bird weighed about 10 pounds dressed and no apology was needed for its quality. It was a mighty fine toothsome specimen of poultry meat. Everbody pronounced it good, came back for more, and said that "just chicken" would hereafter seem very ordinary. Some folks won-

CAMPINES
GOLDEN and SILVER
America's Champion Blue Ribbon Strain

At Madison Sq. Garden, N. Y., Boston and Baltimore, America's three Greatest Shows, **my birds won more First Prizes than all competitors** combined, winning **17 First Prizes** and **20 Specials**, also over **20 other Regular Prizes** completing an unparalleled record.

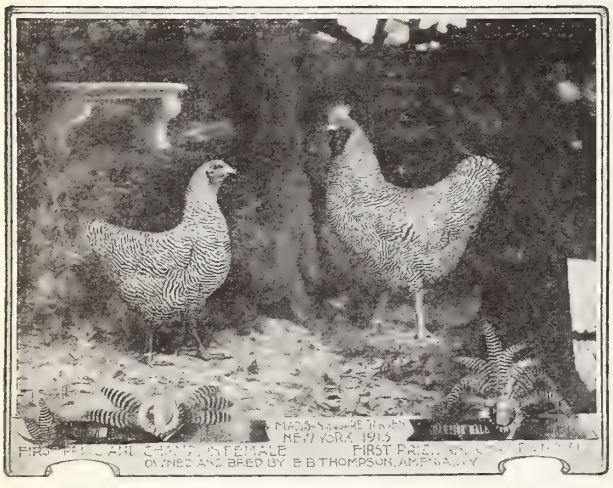
Every winner from our own yards except fourth cockerel. We will please you with the the best exhibition and breeding birds at right prices. Satisfaction or your money back. Write wants. Eggs in season. Catalog.

BIRD BROS., MEYERSDALE, PA.

der why soft roasters bring such fancy prices; they sell at retail in Boston market at from 45 to 50 cents a pound when common chicken meat sells at 20 to 25 cents a pound. The reason is easy to tell; well made soft roaster meat is worth twice as much per pound to eat, if you like good things and can afford the price. South Shore soft roaster or winter grown chicken is scientifically grown into full, soft-meated excellence and fairly melts in the mouth. It is as different from ordinary chicken meat as real-cream, home-made ice cream is from the rubbery cornstarch-thickened article that has little of the good family cow's product in it. We have eaten chicken in many states, western chickens, Michigan soft roasters, Philadelphia capons and home-grown ones, but always the quick-grown soft roaster, of the South Shore specialists, tickles our palate best and makes a feeling of great contentment beneath the belt. We note that when a Massachusetts poultryman wants a specially good dinner, he doesn't choose frozen or refrigerated poultry like that oft quoted New York marketman, but he gets a good prime, juicy, soft roaster, fresh killed and promptly drawn; has it cooked by a cook that knows how and then challenges the world to show anything better and more delectable in the line of chicken meat. Somebody ought to give the *Country Gentleman* staff and some of our government experts a real taste of well-cooked soft roaster—then, maybe, we would hear less about the wonderful virtues of frozen and cold storage poultry. If we let the packing interests control our reading matter it won't be long before they try to force us to believe that stale and frozen foodstuffs are preferable to the new, fresh article. Selah!

"Success With Hens."



Raise chickens and thereby reduce the cost of living, and have a lot of fun doing it, is the advice of Robert Joos in his book, "Success with Hens," just published by Forbes & Co., Chicago ($1.00). This is a complete guide to poultry raising that thoroughly covers the subject by an expert. It is clear, practical and up-to-date.

The fifty-five chapters give full directions for the hatching and brooding of chickens, incubation, feeding and housing, increasing the egg supply, cure of diseases, the marketing of eggs and fowls and everything pertaining to the care of hens.

Nothing is given but the best methods and only those which have been proved by the experience of successful poultry keepers. The small and large poultryman, the beginner and the expe-

E·B·Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Are Fashion's Proudest Birds

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

The record of my Barred Rocks at Madison Square Garden, 1913 and 1914—two years in succession—is the Capstone to their unexampled record for twenty-six years. For these achievements see opposite page and back cover page.

You are now thinking about eggs to produce the Silver Cup and Blue Ribbon winners for next season's shows

Think of the great satisfaction of winning prizes on birds you raise with your own hands—from the time the chick first sees daylight until the Blue Ribbon hangs on the coop in the show room. The delight of winning on a bird you owned all its lifetime cannot be described.

My Imperial "Ringlet" Eggs will prove a splendid investment

You may raise a single chick worth twenty times the cost of the eggs—a bird worth hundreds of dollars—hundreds of my customers have done this. Remember, the first prize cockerel or pullet at a great show always comes out of one egg.

The birds in my matings have wondrous beauty of even blue color and narrow, sharp, evenly divided "Ringlet" bars, outside and to the skin. They have fine heads, grand size, majestic shape, stylish carriage, good length bodies and backs of great breadth carried to low, well spread tails; besides they are the richest first prize New York winning blood in the world.

My Eggs are the best that money can buy—They produce first prize birds

To produce the finest first prize show birds demands ths highest degree of expert knowledge—My birds are mated by my own hand.

Cockerel from "Ringlet" Eggs wins 6 first prizes

Mr. E. B. Thompson, Madoc, Ont., Apri 1, 1913.
Dear Sir:—
Kindly quote prices on one setting of eggs from your best cockerel mating pen. Out of the last eggs I got from you I raised a male bird that won 6 first prizes last year. He has never been beaten.
Truly yours, A. H. Watson.

My matings are wonderful in their high quality and blood lines

Barred Rock breeders who visit my farm declare my matings are unequalled. I strongly urge all Barred Rock Fanciers to come and see these matings—they cannot be equalled in all America and I want you to see them—yon need this Imperial "Ringlet" blood and barring to win prizes.

I Will Help You to GREATER SUCCESS and LARGER PROFITS

Richly illustrated 70-page catalogue upon request.

EGGS from the finest Exhibition Matings in the World, $10.00 per setting; four settings $35.00; one hundred eggs $60.00.

E. B. Thompson

Lock Box 510, Amenia, N. Y.

rienced, will find this book indispensable. It will reduce losses and increase profits.

—o—

Important Announcement — Coliseum Show.

The Red Breeders' Club of the World will hold their annual meeting in connection with this exhibition and more than $200 in cash will be offered in prizes. The Red class for 1914 will be equally divided between James A. Tucker and A. F. Kummer. Where Mr. Tucker judges cocks in one class he will judge cockerels in the other class, and vice versa all the way through, so that every breeder will have a chance at both judges in the two varieties.

The Silver Wyandotte Club of America will hold their annual meeting in Chicago and more than $500 in cash and special prizes has already been offered. It is quite likely that three or four judges will be assigned to this class—perhaps one judge for cocks, one for hens, one for cockerels, one for pullets, and then two judges on old and young pens. This suggestion has been made by Wyandotte breeders and will very likely be acted upon. The judges that will probably be selected are: Shellabarger, Pierce, Kummer and Johnston.

The Barred Rock class will be divided as follows: Shellabarger, all exhibition birds; Branch, all pullet mated entries; Johnston, all cockerel mated entries.

H. A. Pickett will judge all water fowls; Branch will judge turkeys; Tucker will judge Cornish; Dr. H. P. Clarke will judge Campines and Buttercups; Kummer will judge Brown Leghorns and Rose Comb White Leghorns; Smith will judge Single Comb White Leghorns; Hark will judge Partridge Rocks and Partridge Wyandottes; Whitney will judge Minorcas, and White Wyandottes will likely be divided between Whitney and Pierce, as last year; Wells will judge Buff Rocks; Hale, White and Columbian Rocks; Pierce, Light Brahmas and Colored Wyandottes; Johnston, Langshans; McCord, White and Buff Orpingtons; Greenwood, Black and Blue Orpingtons; Pickett, Anconas, Buckeyes and White Rocks; Taylor will likely judge Andalusians, depending upon the club meeting.

Other classes will be divided among the judges, so that all awards may be made not later than Saturday night, December 12th.

This announcement is made early, so that all exhibitors may know in advance who will judge the important classes. Remember the dates, December 11-16. All inquiries for premium list are addressed and filed as they come in. Premium list will be mailed November 1st. Entries

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—winter of 1913, winning as follows:

First, second, sixth and eighth on cockerels.

First and sixth on pullets.

First, second and fifth on exhibition pens.

First on cockerel mated pen.

Second, third, fourth and fifth on cocks.

The Imperial Prize of the show, Sweepstakes special for champion male.

Sweepstakes special for champion female.

Diploma presented by the Amer. Poultry Ass'n for best cockerel.

Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety.

Challenge silver cup for best exhibition pen.

Special best shaped male.

Special best colored male.

Special best colored female.

Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, $25 special prize, presented by the New York Show for finest display.

All silver cups and cash specials—four times as many first prizes as any competitor.

More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibitor of any breed.

My Exhibit of 56 Birds Was the Best the World Had Ever Seen

Furthermore—The "Ringlets," exhibited by me personally, have won at New York a grand total of 32 First Prizes—more than double the number ever won by any competitor. No other Barred Rock breeder in the world has ever won more than 13 First Prizes in the entire history of the New York Show. **Mark the Difference.**

I am the only living Barred Rock breeder who has ever won all the Regular and Special Prizes on Pullets at a single New York Show, viz: **1st, 2nd, 3rd, 4th and 5th;** All the Regular and Special Prizes on Cockerels, viz: **1st, 2nd, 3rd, 4th and 5th** at one show. Both Sweepstakes Champion Male and Sweepstakes Champion Female at one and the same show in Madison Square Garden.

The Imperial "Ringlets" Are The Standard By Which All Other Barred Rocks Are Judged

To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, N. Y., blood mated to produce prize winners. Richly illustrated 70-page catalog upon request. It is full of original pictures of New York winners from life. When writing mention Am. Poultry Journal.

See my ad on back cover page for wonderful 1914 record at New York

Geo. H. Northup to Mr. Ralph Roudebush and Others.

Mr. Editor:—

Will you allow me space in your valued journal to say to Mr. Ralph Roudebush and others that I have never written any testimonial for Mr. Roudebush or his Minorcas; that I don't remember of ever seeing him or his Rose Comb White Minorcas that he owns or ever owned; that I never have declared him the originator of the Rose Comb White Minorcas, and I believe he did not originate them. Mr. A. E. Walton, of Upper Sandusky, Ohio, wrote me in about 1892 that he had been breeding Rose Comb White Minorcas since about 1886, and I believe that Mrs. Osborn, of Fabius, N. Y., was breeding and exhibiting Rose Comb White Minorcas long before Mr. Roudebush was ever heard of as a breeder.

I quote here a letter from Mr. Roudebush, in which he asked me to sign and return a testimonial which he had written, which I refused to do. He has since published the same testimonial in his catalogue over my name:

Hope, Ind., May 27, 1913.

Mr. Geo. H. Northup,
Middle Granville, N. Y.

Dear Mr. Northup: As you are known far and wide as the Minorca King of the world and an expert poultry judge of all varieties of poultry is my foundation for writing you this letter.

You have saw and passed upon my stock either in my hands or my customers at some of the leading shows of America, and I would like for you to please sign the following slip of paper which I am enclosing or one similar to it and return it to me at once in the stamped envelope enclosed herewith.

If you will do me the favor I will try and return it to you when ever the opportunity affords me to and with the greatest of pleasure.

Thanking you in advance for this kind favor, I beg to remain,

Yours very Respt.,
Ralph Roudebush.

Here is a copy of the testimonial which Mr. Roudebush sent me to sign:

Middle Granville, N. Y., May 30, 1913.

There is hardly a show any more but what I find the Rose Comb White Minorcas bred and originated by Ralph Roudebush in the lead either when shown in his hands or his customers.

He has mastered the problem and is now the proud originator of the best strain of Rose Comb White Minorcas on earth.

Yours truly,
_____.

I quote here a portion of my reply to Mr. Roudebush:

"Granville, N. Y., June 9, 1913.

"Ralph Roudebush, Esq., Hope, Ind.

"My Dear Sir:—Your letter of May 27th arrived in good time and ought to have been answered before.

"You have asked me to sign the testimonial that you have enclosed and return to you. If I knew it was fully true it would give me great pleasure to sign the testimonial and return with this. Somehow, I do not remember of having judged any of your birds, though I may have judged them in many different shows, in different states. My work as judge has been from six to ten states a year for many years, and it is not strange that I do not remember your exhibits. If you will give me a list of the shows where you have exhibited your Rose Comb White Minorcas, where I have acted as judge, or the shows where I have judged your customers' birds, giving their names and addresses, I will then only be too glad to write you a testimonial embracing these winnings and adding any good word for your exhibits that their merit justifies, and I will make the testimonial as strong as possible and do all I can to help you make your birds more popular.

"Please understand that I am not disputing your claims, but I would not sign your testimonial when I have no recollection of having seen any of your Minorcas and I cannot think you would want me to. As soon as you give me the facts I will prepare a good testimonial and send you. Yours very truly, Geo. H. Northup."

Mr. Roudebush has never given me any reply to the above, and I have not written him since. I have, however, perfect proof that Mr. Roudebush received my letter.

1. I wish this article of explanation published in your journal as soon as possible, that your readers will not longer be deceived by the testimonial in Mr. Roudebush's poultry catalogue which appears over my name.

2. I wish it to appear, to answer many who have written me, after reading the testimonial, if I really think Mr. Roudebush did originate the Rose Comb Minorcas. And last, but not least, that the truth may be known.

Yours truly, Geo. H. Northup.

Granville, N. Y., March 14, 1914.

Great Prize Contest for Chick Growers. See Page 653

Columbian Wyandottes

After having won every first at every southern show and all shape and color specials and 16 silver cups, I stood on the Mount of Victory looking, like Alexander, for new worlds to conquer, so I tackled Madison Square Garden, but as that show came at the same time as the big Tampa show, I could not send all my good birds to either show, so divided them up, **winning at Tampa** 1-4-5 cock, 1-2-3-4-5 hen, 18 in class; 1-2-3-4-5 cockerel, 19 in class; 1-2-5 pullet, 1-3-5 pen, special for best cock, cockerel, hen, pullet and pen, special for five best hens; special for 5 best cockerels; best display in American class; best display Wyandottes, all shape and color specials; best Columbian Wyandotte in show, Columbian Wyandotte Club cup. At **MADISON SQUARE GARDEN** won first hen and color special—(mind you, for a hen)—fourth cock, fifth pen, and my wonderful hen was the sensation of the show.

I now offer you eggs from these grand birds of the choicest matings at $5.00 per setting.

A grand lot of the finest cockerels for sale at equally low prices.

J. H. WENDLER -:- -:- **LAKELAND, FLORIDA**

FELL'S FAMOUS WHITE WYANDOTTES AT NEW YORK

Madison Square Garden, December 26th to 31st, 1913, win the most wonderful record by defeating all Champions. No other breeder has ever made such wonderful winnings at New York. My winnings complete are:—

First Cock, First and Third Hen, Second, Third and Fourth Cockerel, Second and Fifth Pullet, First Pen, First Display.

I have won First Cock four times, First Hen twice, First Cockerel once, First Pullet twice, First Pen three times, First Display three times in four showings at New York. Catalogue of the finest White Wyandottes ready Jan. 15th.

A. J. FELL Box J West Point, Pa.

RANDOM OBSERVATIONS.

READ.

Keep thinking.

Ever convince anybody?

Join some poultry association.

The majority is always wrong.

Hens transmit fecundity to their daughters.

Do not practice a method not adapted to your locality.

Neglecting to feed green stuff is dangerous, and bad results will appear sooner or later.

The old way of marketing produce, whether eggs or egg plants, honey or horseradish, beans or bananas, is doomed.

In the old days, debates at A. P. A. meetings were more orderly and dignified than some that have been held of late years.

Science is simply knowledge reduced to order. Scientific production somehow seems to scare some people; but you can do nothing, not even tie your shoe, without science.

When fowls, young or old, run towards you "like all possessed," as the old-time phrase was, something is wrong. Ditto when they run away from you. The sublime indifference arising from food always before them is the thing.

You can have roosts out of doors farther north than you think. The strength gained by breathing fresh, pure air makes fowls rugged and they acquire an astonishing indifference to bad weather, just exactly as sleeping in porch bedroom does.

At present, utility men do well to go to fanciers for their stock, and the higher up the fancier is as an expert, the better; but after a while as utility men become more numerous they will do well to go to each other for new blood. They will have better stock for their purposes than any fancier will have.

Trap nesting for removing drones, care in breeding for high average laying records, scrupulous attention given to the highest degree of health and thrift possible, perfect cleanliness and order all over the premises, and the best known foods and methods of feeding used—all these may be combined at a poultry plant, and yet there may be no profits and the business may actually run behind.

If the National Department of Agriculture would compile a digest of all poultry bulletins of its own and all that the states have ever issued, with information as to which are out of print, and price of those available, if they are not free, and send such a digest free to all applicants, and for publication to the farm papers, and especially to the poultry papers, how wonderfully helpful to poultrymen the department would be!

When a hen steals her nest and is never disturbed at all, and her eggs accumulate from day to day, does she sometimes or always turn them when she visits her nest to lay? Reader, can you give the desired information? It is what we have long wanted to know, among a great many other things, but never had time yet to stay in ambush and watch with the patience of Audubon, Thoreau, Baynes, Seton or Burrows and find out.

The emigrants from southwest Europe may be useful, after a sort, "as mud sills of society" to do rough, coarse work in mines and on farms, but the trouble is that in the long run they will intermarry with other classes and spoil the American breed, the best history has ever known. It is to be hoped that none of us are like the orator who had crooked his elbow too many times and shouted, "What do we care for posterity? What has posterity ever done for us?"

The stations, between them, should tell how long, in cases of different breeds, and different parts of the country, it pays to keep hens for the sake of their eggs for the food market. Something has been done in this line, but not enough. This matter is extremely important. Millions of dollars depend on whether hens are turned off too early, or too late, or just right. Let it be remembered that the immense number of layers in the country are in question, since it is appointed to them all at once to die, hence the great importance of this matter.

* * * *

Not Too Particular.

It has been well said that it is not necessary that eggs in an incubator be always kept to a particular temperature, just to a nicety of a fraction of a hair, in order to hatch pretty well, for nature allows considerable leeway. A good authority, speaking of feeding young chicks, says that although there is only one best way, they will thrive under quite diverse methods if the general management is good, and the younglings were well hatched from strong-germed eggs. Also that in feeding layers there is no precise method absolutely necessary, and if the plan you are following gives good results you need not vex your righteous soul by making changes.

that the mosquito is, or may be, a tremendous curse. We said "may be." It is a curious fact that so long as not a mosquito in a district lately settled has ever contracted malaria, mosquito bites cannot give malaria to anybody. But let a person who has contracted malaria elsewhere come to the district, the mosquitoes may bite him and contract the disease from him and then carry it to the people they may bite later, and these malarious people may inflict other mosquitoes, to inflict other people, and so on and on, "endless chain" style. Moral: Do not settle in a mosquito infested district in Texas or anywhere else.

* * * *

Soil Very Important.

The advantage of a poultry establishment being located where the soil is very fine and soft is that fowls will be tempted to dust themselves much oftener and more thoroughly than they would do otherwise. Taking a real good thorough dust bath demands a surprising lot of strength. Watch a vigorous fowl at this work and see how much exertion there is about it. It is a job that is never performed well unless the soil is right. It is really pathetic to see the ineffectual attempts fowls make to become vermin free when the soil is gravelly, clayey, or of coarse sand. They tumble and shuffle around in the latter easily enough, but it does little good, because it cannot enter the breathing holes of vermin and so suffocate them. Very fine sand or loam is what is needed. Gravel hurts fowls' wings and discourages them from working.

* * * *

The Overeating Scare.

If anybody is afraid that fowls, young or old, will overeat by being allowed to have at all times all they want of well adapted kinds of food, embracing always green stuff, some form of animal food, at least one sort of extremely carbonaceous grain and another rich in protein, then I ask what becomes of the health of cattle that stay for six months on a stretch in a rich pasture?

Dr. Woods Hutchinson says that the nations and the individuals of any nation that always have all they want of the richest, most nutritious food are the healthiest and the most efficient and rule the world, and always have done so. That the crying evil is not so much overeating by people in the most prosperous class as undereating in the class of the poor, such as unfortunately exists in the wealthiest nations.

* * * *

Nature In Disease.

"Hens will greedily eat the herb that will make them lay the better."—Mortimer.

The above is copied from Webster's Unabridged where meaning of the word "lay" is illustrated. Who "Mortimer" was, I know not, but the phraseology indicates that he was a writer of old English days. Evidently he studied nature and found out that in matters of diet fowls know what they are about.

Not only is appetite a correct guide in selecting food when there is health, but in illness a craving for something unusual indicates exactly what is needed. A good illustration is found in hookworm patients. It has long been known that the lowest of the "poor white trash" of the South numbered many "clay eaters," but why they should want to eat clay was a mystery. When the hookworm infestation and the life history of the parasite were discovered it became known that the creature lived upon the red corpuscles of its victim's blood, causing the pale and bloodless appearance of the patient. Now the red of the corpuscles being made up of iron oxide and the clay containing a large proportion of the same substance, lo and behold, without the aid of doctor or druggist, the hookworm sufferer instinctively prescribed for himself just the iron that was needed. The lower animals also instinctively prescribe for some of their ailments. As everybody knows, when a dog or cat is "off its trolley," it will doctor itself with fresh grass or weeds.

Freight Prepaid

Postal Brings the Book, "Hatching Facts"

That's the book you want, whether you are in the poultry business on a large or small scale. "Hatching Facts" has information for every member of the family. Tells you how to make big money—gives you my personal money-back guarantee. Just write, "Send me Hatching Facts," and my whole interesting proposition will come to you free. Jim Rohan, Pres.

Belle City Incubator Co. Box 27 Racine, Wis.

Buffalo county, Neb., exactly halfway between the Atlantic and Pacific oceans, and owing to its distance from each and also from the lakes and the gulf, grain is generally cheaper there than in any other part of the country. This county leads all others in Nebraska in the production of poultry products, though it is small in area compared with many.

Well, now, eggs this last winter were 35 cents at Kearney, the county seat, and at times hard to get at that. During twenty-eight years previously price had never been over 25 cents, except for very brief spells in the winter when it had reached 30 cents a few times. Through the winter 15 cents was usually the price and considered "big." In summer, eggs sometimes sold three dozen for a quarter, but commonly the price was 10 cents. Yet note that in this particular locality and everywhere else nearly, as Journal has lately proved very conclusively, food for poultry has risen in cost faster than has the price of eggs. At the locality mentioned corn was once 10 cents per bushel, delivered, or 8 cents if purchaser hauled it. When corn was 15 cents per bushel, eggs were 10 cents a dozen in summer and 15 cents in winter. Now lately corn has been 60 cents. To be the same proportion as years ago, eggs at Kearney should have been 60 cents or occasionally 70 cents a dozen all last winter, instead of 30 cents generally and 35 cents rarely, as was the case.

* * * *

Public Vs. Private Management.

People who are afraid that if the government takes over the express business a great bureaucracy of employes will grow up which will harbor much slack work and inefficiency, may be excused for their fears, since they see that in government offices at Washington there are many clerks who do not earn the salt in their porridge.

Where the idling is not the worst by any means, in many cases three men do no more than the proper work for one. It is notorious that when employes work for the public, say for a city, they move as slow as molasses in cold weather. One quick glance through the window will tell you whether the gang in the street is working for a contractor who has taken a job or for the city direct.

But in mail work, involving parcel post with express added, there will be no shirking, and never has been any under the old order in mail-car and postoffice service, for the time table is an inexorable master who governs everything. Every employe is controlled by it and cannot help himself, for he must rush his mail along or there will be congestion and no end of trouble. The quicker he can push things and get rid of one batch of stuff before another comes, the easier it will be in the end. In the service once I was detailed to have charge of the mails at a post and "know myself how 'tis."

The ordinary truth that an employe will work better for a private employer than for the public will never apply to mail work, neither to government work running trains and telephone and telegraph business, which I, with a rapidly increasing crowd of other people, hope will speedily come to pass.

Many persons are deterred from advocating government ownership of express, telephone, telegraph, passenger

Here's Your Proof

"It makes brooding a pleasure. No foul odors. Chicks far more lively." That's what a user of the Newtown Giant Colony Brooder writes. Read his letter and the others given below:

"I have nothing but praise for the Newtown Colony Brooder. I ran a trial hatch to test out Brooder and have only lost one chick up to eleventh day, and he was small. All others are doing finely and it seems you have made a perfect Brooder. Care of chicks is reduced to a minimum, making brooding a pleasure instead of a drudgery as I found with small lamp Brooders. Chicks are far more lively, for they are never confined with foul odors and if they feel cold at all, they run under the deflector a minute or two and then off they run again.

"With lamp Brooders, my experience has been that the chicks would very often remain outside the hover and get chilled rather than go under the hover in the dark, where they could not see to scratch for food. With the Newtown Giant Colony Brooder, chicks are always in sight of caretaker and always within reach of warmth while still being able to exercise."

—W. B. WOODWARD, Waban, Mass.

Newtown Giant Colony Brooder

Coal-Burning, Self-Feeding, Self-Regulating

Chicks Contented in Zero Weather

"I received the Brooder stove, and have it in operation. I am well pleased with it, have shown it to some of my poultry-raising friends and they all seem to think it the stuff. We are having zero weather now but the chicks are contented." —ANDREW NUSSBAUM, Remington, Ind.

Saves Time and Labor—Trifling Expense

"I used one of your Brooder stoves last season and it surely does all you claim for it. I put around it about 600 little chicks and have the finest pullets I ever raised.

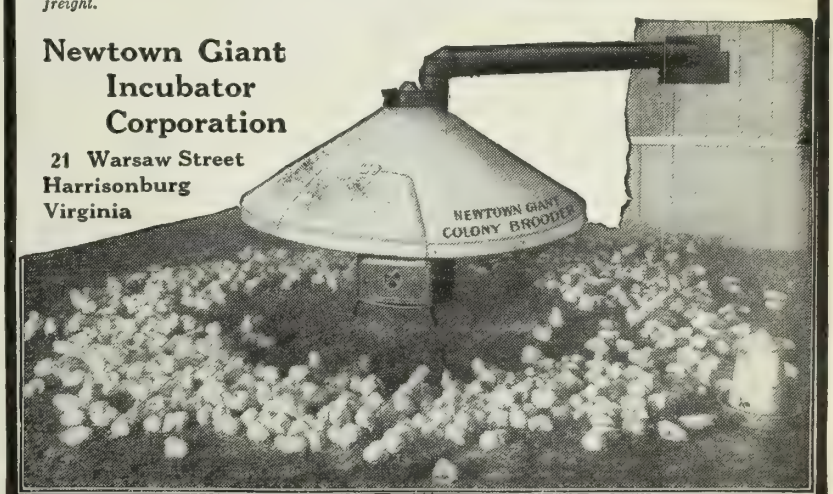
"I would not think of trying to raise young chicks without one of your stoves, and I am sure that no poultryman will ever regret ordering one or more of them, as they are surely a time and money saver.

"As to operating expense, it is simply a trifle as compared with other ways of attending to the same number." —W. E. RHODES, Linnville Depot, Va.

Will Save Many Thousands of Chicks

"After thoroughly testing the Newtown Colony Brooder, we consider it a good Brooder in every respect and one that will save the poultry fraternity many thousands of chickens and a large amount of money." —W. R. CURTISS & Co., Ransomville, N. Y.

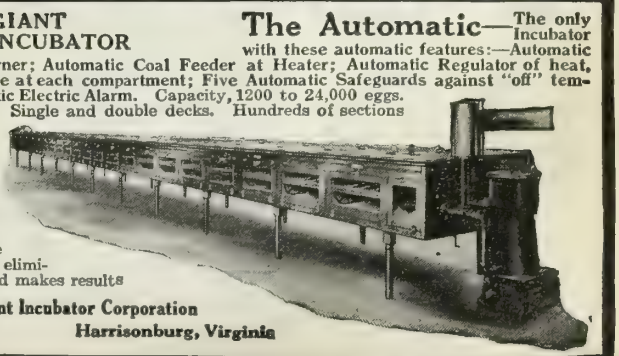
Made in two sizes, one for up to 500 chicks; and the other for any number up to 1500.



Eight cents a day for coal is the only operating expense. Compare that with the cost of burning the large quantity of oil required by other Brooders. Coal feeds to the fire automatically from a coal magazine, which holds a two to four days' supply. Powerful thermostat controls the drafts and creates a constant, even heat for the chicks.

Safe and convenient. Easy to install quickly. Operates in any building.

Profit by the experience of others. Raise more and better chicks this year with much less time, trouble and expense. Write now for handsome catalog illustrating and describing the coal-burning, self-feeding, self-regulating Newtown Colony Brooder, "Three-In-One" Portable Poultry Buildings and other equipment.



If there is no Newtown Brooder dealer in your locality, we will ship immediately and prepay the freight.

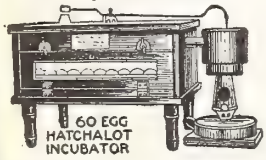
"DRYING UP!!"

5TH YEAR — SEE THAT "XX"? POINTS THE WAY. START RIGHT YOU END RIGHT



That is the cry **everywhere.** "My chicks are drying up in the shell, will your Tester help me?" **Most assuredly.** Don't incubate eggs **unless they first pass the Magic Egg Tester.** "XX" eggs hold moisture best, hatch best, and make the chicks with backbone, health and vigor. **Impossible to hatch one egg this Tester rejects.** $2.00 each. 1 year's trial. Guaranteed. Cost refunded if dissatisfied.

MAGIC EGG TESTER WORKS, Dept. B, Buffalo. N. Y., also Bridgeburg, Can.

Use This Hover In Any Building

You need no special equipment for the International Sanitary Hover. You can use it in a laying house, a colony house, tent, barn, stable, piano box, or even a dry goods box—no platform to build, no holes to cut. To set it up, you simply light the lamp and set it down, and it is ready for instant service anywhere. Weighs 30 pounds, easy to move. Made of metal, and always sanitary. Heavily insulated. Circular—no corners for crowding—and warmest just inside the curtain. Heat radiates from *above.* Capacity 100 chicks—more hovering space than any other hover. **Price $8.50 complete.**

Hatch Chicks Right

The 60-Egg Hatchalot Incubator assures you healthy chicks, with husky constitutions. Large boiler and dependable regulator gives mild, moist, natural heat. Made of clear cypress—built to last. **Price, $7.50.**

Save Money and Work in Feeding

Make your fowls work for their food and save grain and labor by using the 6 in 1 Exerciser Feeder. Fill it in the morning and fowls feed themselves. Large central hopper holds grain that the birds scatter in the litter, by working an agitator. Six other compartments hold dry mash, grit, shell, beef scraps, etc. Always clean; double flange around rim prevents wasting feed. Makes other feeding devices unnecessary. **Price, 40-quart, $4.75; 20-quart, $3.75.**

and freight service because in sundry other cases government control breaks down. For instance, government cannot build one of its own ships or lighthouses, or dredge one of its own canals or harbors so cheaply and well as it can be done by private contract. This has been tried a hundred times. But where the silent but impressible force of the time table is an incessant factor everything moves with as much precision and effectiveness under public as under private management. It just has to.

This should be called paternalism, not socialism. Whatever must be done collectively in order to have it done in the best manner and for the good of all should be done that way. That's all there is about it.

The recent looting of the great New Haven and great Frisco roads helps show that railroading should be a public, not a private business. This whole matter to which Journal has lately given considerable space is suitable for discussion in a poultry paper, if any topic is, for there is very little produce or live stock, either fancy or for the table, that is sold at the poultry yards. It is practically all shipped. Poultrymen everywhere, work for your own interest! Push on the column!

* * * *

Farmers and Farm Eggs.

The majority of people have always been wrong on matters of religion, morals, civil government, training of children, ways of doing common things, and especially in the work of earning a living. Take the raising of corn, for instance. For almost three hundred years proper selection of seed has been neglected and the hills of one stock or none at all over this broad land with the proper number of stalks and without any additional labor whatever would have produced additional grain in a single year, it has been calculated, enough to load, twice over, to full capacity, every vessel on the ocean bearing the American flag. Thus with all branches of farming, but especially live stock, and of all divisions of live stock, poultry fares the worst, because, however thrifty the fowls, their products reach consumers by way of the grocery in such an abominable condition.

The great movement for the cooperative shipping of eggs by farmers is praiseworthy and will supply better eggs than the filthy article the country grocery handles, but the enterprise is beset with many difficulties and can never insure that farm eggs generally can be good or even fair to middling so long as the average farmers themselves fail to properly care for farm poultry. "But farmers can be taught," says someone. How long since? There are farmers' institutes and farm lecturers in Texas a-plenty, but, generally speaking, they are a perfect farce as far as results are concerned, and the speakers freely admit this when they talk with you confidentially on the side.

Helen J. Woods, Editor

SHIRKING RESPONSIBILITY.

IT IS A common trait of humanity to shirk responsibility. The tendency to leave to others that which we should in all honor feel answerable for is one of following along the line of least resistance. We all have it to a greater or less degree.

Parents are in many instances adjudged unfit to have the bringing up of their children where they have failed to provide proper nourishment for the body or protection from cold and exposure. We find a great many, however, in all walks of life who give nothing but husks for the development of the child's mind. They shirk the responsibility. They pay, or do not pay, a "two-penny" tax for which they expect all the responsibility of their children's mental development to be lifted from their parental shoulders. They scold at the child's ignorance; they suffer because of his inability to accomplish anything of value; they go down in gray hair and tears to the grave because of his wrongdoing. Yet never through it all grasp the chief reason.

Everything in the world either progresses or it deteriorates. There is no such thing as a permanent standstill. Either a child goes forward in his development or he falls behind. The responsibility for guiding these malleable and most precious years cannot be transferred to school or church. The parent who shirks the responsibility must, at least in part, pay the price; while the children to "the third and fourth generation" suffer accordingly.

It is almost inconceivable how very little many parents are concerned in what interests their children. In so far as the child's clothing and food go, we usually take time to cater a little to his individuality, making our influence felt in that direction. But we leave his real self to develop with little or no knowledge of his innate personality.

And yet no one can dare to suppose that the mind is in less need of nourishment than is the body, or that the clothing of a child's body is more important than the beauty and breadth of his mind's raiment.

How many of us take time to answer truthfully the questions we are asked by children? Or to give them any worth-while suggestions regarding subjects in which they display an interest? A great many do not even try, and comfort themselves with the thought that schools are supported by the public for that purpose. The schools have always been deficient in their methods of instruction, but even were they broader and more far-reaching in their scope, there would still be disaster in store for the parent who shirks his individual responsibility as a guiding influence in awakening his offspring's mind to a realization of the vital things of life. And this responsibility should make itself evident in many ways. It partakes of the nature of public responsibility in some instances. Public wrong should enlist the services of whole communities against it.

Practically all of us are waging war against those pests—the fly and mosquito—and through this united effort they will eventually be annihilated. But one man or fifty men fighting to this end could never reach that desired state. There must be co-operation to effect any real and lasting good. So, when we read that an eastern city decrees that on account of a lack of funds the trade schools of that city shall be abolished, it is time that the people of the city shouldered their responsibility by strenuous and effective objection. The city of Newburyport, Mass., has discontinued its manual training schools. The students in these schools literally begged for their continuance. The students volunteered to walk to school as a means of saving the city expense, on account of free transportation provided by the city, in order that the manual training schools should be continued. But the schools were closed. This is but one case where public responsibility is being shirked by a large body of citizens, and certainly greatly to their ultimate loss.

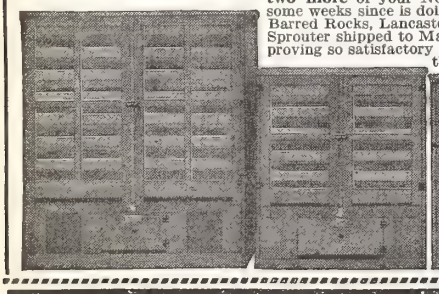
In the matter of parental responsibility we can best show our appreciation of what is entrusted to our care by devoting thought to the subject. We may not be able to determine just where parental responsibility begins or ends (if it ever does), but we can easily see that it is a very big proposition, and

that no one can relieve us individually of it.

To get at the so-called little things, which in the aggregate are the great things, we can best get at the real child by studying his thoughts. We can encourage and show our appreciation of a little more intimate association with what he thinks and feels. Certainly there is no better way to wield a goodly influence over him than that of encouraging him along the line of right thinking, and this can be done in countless ways—by the inspiration to be gained by reading good literature, by nature study suggestions, by the right encouragement to overcome difficult undertakings, by the results attained from continued thought along any line worth while.

Most parents will say they have neither time nor patience, but it will be found in nearly every case that the parent who devotes honest concern for his child's best good will find time for these things even though he is the busiest parent in the entire community. We can usually find time for those things that pull heavily and persistently at the heart strings. To have your child's best interests at heart means that you will devote considerable thought to his welfare, which includes food for his mind.

In the matter of mutual interests between parent and child, these things will develop naturally, as a rule, but cannot continue to exist without mutual sympathetic understanding. The child whose ideas are pooh-poohed, whose deepest interests make no appeal, soon learns to hide his thought "under a bushel" so far as his parent is concerned. If he makes good, it is not the result of any help or encouragement given him by his parent, though the latter may claim the credit; but if he fails, the parent claims no share of the blame.



It would not hurt matters in this world could we get a little nearer the heart of things. Parent and child need to know each other better. Incongruity of age is not a barrier. Otherwise, how can a little child, a mere baby, in fact, become so vitally interested in the affairs of its parents? Everywhere we see children "playing" at what father and mother do. They are born imitators. Thus it behooves us to cultivate a little interest in what our children are thinking and doing, to endeavor to direct them wisely when we can, to learn wisdom from them when we can, and especially to make our everyday lives worthy of being imitated.

DOUBLE QUICK GRAIN SPROUTER

THE PERPETUAL POULTRY SILO—Grows Green Feed While You Wait

The First, the Original, the Pioneer of All Grain Sprouters

The Double Quick Originates and introduces, others imitate and follow. Fully **100 Double Quicks** to every **half-dozen of all others** combined. Egg And Chicken Salad.

By Miss H. A. L.

Chop into cubes meat from one boiled chicken or fowl and place on a platter of crisp lettuce leaves. Decorate the edges with small whole olives and cover with chopped hard boiled eggs. Over all drop spoonfuls of mayonnaise or a rich boiled salad dressing. Serve very cold.

Penuchi.

By D. L. M.

Two cups brown sugar, one cup white sugar, three-fourths cup sweet milk and a pinch of salt. Blend thoroughly before putting on to cook. Then boil until it forms a soft ball when dropped in cold water. Remove from fire, add tablespoon of butter and beat until it thickens. Before it becomes too thick to pour, add one cup walnut meats, slightly broken, and spread on buttered tins to cool.

Eggs And Onions.

By Miss H. A. L.

Slice and fry onions in butter and place them on brown paper to drain a little. Remove to a platter, squeeze the juice of a lemon over them and place nicely poached eggs on top. Serve hot.

Eggs And Cheese.

By Miss H. A. L.

Butter a baking dish, grate a little cheese over the bottom, dust with cayenne and place in the oven for several minutes to heat. Break into the dish eight eggs, over which grate more cheese, adding a little pepper and salt and sufficient bread crumbs to cover well. Dot with butter and bake in a hot oven fifteen or twenty minutes.

Egg Cutlets.

By Miss H. A. L.

Cook two eggs in water just below the boiling point about fifteen minutes, or until hard. Remove from the shell and crush with one tablespoon bread crumbs, one tablespoon grated cheese, and seasoning of curry, nutmeg, pepper and salt. Mix together with yolk of a raw egg and shape into cutlets. Dip them into the white of an egg, roll in bread crumbs and fry golden brown in oil. Sprinkle with parsley and serve.

An Egg Drink.

By Miss H. A. L.

Beat the white of one egg until stiff, add gradually one-half tablespoon of sugar and juice of one-half orange. Beat the egg yolk until thick and add a little salt, one-half tablespoon sugar, the juice of one-half orange and one-half lemon. Fill a glass one-fourth full crushed ice, pour the mixture over this and serve at once.

Egg Nog.

By Miss H. A. L.

Beat the yolk of an egg until creamy, add a teaspoon of sugar, a little grated nutmeg and a scant cup of milk. Add the stiffly beaten white of egg, slightly sweetened and flavored with a grating of nutmeg. Serve very cold in sherbet cups with sponge drops.

THE PITTSBURGH POULTRY Show.

Held at Pittsburgh, Pa., Jan. 19-24, 1914—A Superb Exhibit Grandly Displayed in the Large and Beautiful Exposition Building.

BY H. B. SCHWAB, EASTERN REPRESENTATIVE OF A. P. J.

FOR years to come we will look back to this Pittsburg Show and remember it chiefly for its many features, its great classes and the great records made by some of the exhibitors, these with the particular efforts of the officers and members of the association combined to make this a memorial affair long to be remembered. The wonder class of S. C. Black Minorcas was the sensation of the year and the Minorca Breeders can well receive all possible credit for this wonderfully beautiful display.

Sensational also was the winning record made by Mr. M. F. Delano, successor to Owen Farms, Vineyard Haven, Mass. We did not think that such a record was possible for any man to make in large and strong competition. Mr. Delano had the quality and richly deserved all he won. It was simply a case of getting his full due. Other great records were also made to which we will refer later.

The officers of the association who made this great show possible are: president, F. G. Davis; vice president, F. A. Goedekr; treasurer, G. B. Hatton; secretary and superintendent, W. P. Craig. The judges, Chas. D. Cleveland, W. S. Russell, D. W. Young, W. C. Pierce, Theo. Hewes, M. A. Northup, L. Rawnsley, A. F. Kummer, D. M. Green, G. W. Webb, A. H. Emch, and F. H. Cook.

The "Flea" meeting held here was a great success and a enjoyable affair with many new members admitted. Several specialty clubs held their annual meeting here and breeders from all sections of the country attended.

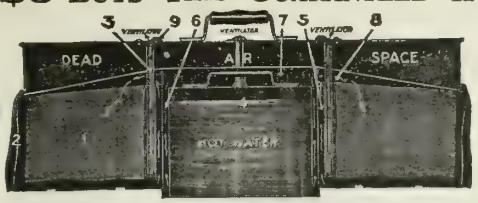
The Exhibitors and Their Winnings.

Barred Rocks formed a class of 114 birds with Mr. F. W. Richardson, Hicksville, Ohio, winning cock 5, cockerel 2-3, hens 1-2, pullets 1-2, pen 1, cockerel-pen 1, pullet-pen 3. Best display and several specials.

Other winners were: H. L. Fike, J. M. Ecoff, C. L. Ayers, W. H. Lawson, who won first cockerel; and Heilman and Chalfant.

In White Rocks 101 birds were in line, with the first hen shown by Mr. C. W. Voskamp the gem of the class.

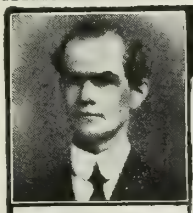
Silver Penciled Rocks a beauty class.



Partridge Rocks, a class of seventy birds and one of unusual quality.

Columbian Rocks brought out 81 birds with the club meeting held here.

White Wyandottes a great class of 155 birds, with many noted breeders showing. Hon. Mr. M. F. Delano, Vineyard Haven, Mass., won cock 1-4, hen 1-7, cockerels 2-6, pullets 3-4, old pen, 1, young pen 1. Best collection champion male in American class, champion White Wyandotte male, etc. Also note his winning in White and Buff Orpingtons and Reds.



Mr. Chas. D. Cleveland, Eatontown, N. J., won in this class hens 3-4, pullets 1-7, champion female, best shaped female, etc. In Columbian Wyandottes Mr. Cleveland made a display only of a pen that attracted a great deal of in-

$5 BUYS THIS GUARANTEED HOT-WATER BROODER $5

Pay no more. 30 days' free trial. **Parker's Economy Brooder** economizes time, labor and fuel; raises big, strong, healthy chicks. Made of galvanized iron; 28 inches diameter. J-M ASBESTOS ROOFING

Used on Largest and Most Expensive Buildings

City Hall, Philadelphia, Pa. Roofed with J-M Asbestos Roofing

This great building, erected at a cost of $25,000,000.00, is covered with J-M Asbestos Roofing. Surely, a roofing that is good enough for this monumental structure will answer your requirements.

Hundreds of the largest and finest buildings of all types are covered with J-M Asbestos Roofing—because it is the roofing of *proven permanence.*

J-M Asbestos Roofing is *all-mineral.* It is composed of several layers of Asbestos (rock) felt cemented together with Trinidad Lake Asphalt—the greatest waterproofing substance known.

It contains nothing to rot, rust, melt, crack or deteriorate. Never requires graveling, coating, or any form of preservative. Its first cost is the last cost. Cheaper than tin, iron, slate or shingles—and the cheapest-per-year roofing on the market. Gives perfect fire protection. Adapted to any climate. Keeps buildings warm in Winter and cool in Summer.

Furnished in flat sheets or in rolls. It can be applied by any handy man. J-M Roofing Cleats, packed in each roll, make absolutely watertight laps and give the entire roof a handsome white appearance. Suitable for any type of building.

Sold direct if your dealer can't supply. Write nearest Branch for sample of the wonderful Asbestos Rock and Book No. 3126

terest by their grand shape and markings.

Buff Wyandottes a fine rich class of birds with sound color and good forms.

Silver Laced Wyandottes, a beauty class of fifty-seven birds. We are glad to note good sized classes of these at most all shows this year.

Columbian Wyandottes were of good quality.

Partridge Wyandottes, also a neat class, some extra fine.

S. C. Reds, a great class of 140 birds and a battle between several well-known breeders. Schenley Heights poultry farm, Pittsburg, Pa., won cock 4-8, cockerel 1-4-7-8, hens 2, pullets 4-6, old pen 2, young pen 1-3, best collection, best display and several specials. In Rose Combs they won cock 2-4, cockerel 1-2, hen 1, pullet 1-2, best display, best collection, etc. Mr. C. F. Rankin, the owner, celebrated by giving a dinner to several friends and breeders; he is full of vim and has made several great wins this year at our greatest shows. His line is one of superb quality and value.

In S. C. Reds Mr. M. F. Delano won cock 1, cockerel 6, hen 3, pullet 7, with but the four birds shown.

Mr. F. L. Ober, Verona, Pa., the man who walked away with a Blue at the late M. S. Garden New York Show, won here cock 3, hen 1-8, and pullet 8. The first hen a winner in form and grand color.

Mr. Ellis S. Shelly, Williamsburg, Pa., won hen 2, pullet 3, and pen 5.

There was a good sized exhibit of Rhode Island Whites.

S. C. Black Orpingtons, a great class of 130 birds with extreme quality in every coop. Here Major Hugh A. Rose, Welland, Ont., won cock 1-2-4-7-8, cockerel 1-3-4-8, hens 1-2-4-6, pullet 1-3-4-5-8, pen, old pen 2, young pen 1. Best display, first collection and many specials. To describe these birds and winners is their due, every one an ideal in form and of the best of color, making a most beautiful display. First cock and first cockerel both of the choicest, none were ever shown better.

Other noted winners here was the Blue Ribbon Farm, Sandy Lick, P. F. Wm. Cook & Sons, C. C. Merill, M. C. Kilpatrick, etc.

S. C. Buff Orpingtons, a select class of 109 birds and a royal lot of quality they were, superb in condition. This was the Club Show and one of credit. Here Mr. M. F. Delano made his famous record winning of cock 1-2-3, cockerel 1-2-3, hen 1-2-5, pullets 1-5, old pen 1, young pen 1. The president's cup for best collection any variety in the show. Champion male and female specials and all four shape and color male and female specials and eleven others offered by the club.

In S. C. White Orpingtons Mr. Delano won cock 1, cockerel 1, hen 1, pullet 1-2, young pen 1, on six entries, the highest possible record that could be made and this in a class of 161 birds. Mr. Delano has made many notable winnings in the past at the great shows east and west and south, but he or no one has ever made a win that carries with it more glory than this one; he is a worker, he has been before the public for many years and he deserves the greatest possible success.

Other winners in Buff and White Orpingtons were: Wm. Cook & Sons, O. M. Jarret, E. L. Grove, Sandy Lick, P. F., H. A. Hoffman, J. M. Ecoff, Andrew Hawthorn, Windyghoul, O. F., A. G. Crawford, Linden, O. Yards, H. L. Bennett & Co., James Cooley, W. K. Jones, and O. J. Eberle.

S. C. Black Minorcas with 241 birds shown was the banner class of the show. We have never seen a class of Minorcas to equal this one in size or in general quality and it was beside a charming feature of the exhibit. A mention of any kind was a proof of quality and no question but some of the awards were very close and that in several cases there was but very little difference from first to third and fourth, well here was honor enough for all, at that.

The Hilldorfer Black Minorca Farm, Saxsonburg, Pa., won cocks 1-2, cockerels 1-3, hen 3, pullets 1-3-8, old pen 4, young pen 3, and a barrel of specials. This noted line has long had a reputation for quality and this dandy win should enhance it.

Vitalize your roofs

Your roof must have power to resist the blazing sun, the forceful wind, the pouring rain and the driving snow.

Real life and resisting power come from *natural* asphalt. We use the natural asphalt from Trinidad Lake to make

Genasco

THE TRINIDAD-LAKE-ASPHALT
Ready Roofing

The natural oils of this asphalt stay in Genasco and make it proof against rot, cracks, and leaks.

Be on the safe side—get Genasco for all your buildings.

The KANT-LEAK KLEET makes seams watertight without cement, prevents nail-leaks, and gives an attractive finish. Ask your dealer for Genasco—smooth or mineral surface; several weights. Write us for the Good Roof Guide Book and samples.

The Barber Asphalt Paving Company

Largest producers in the world of asphalt and ready roofing.

Philadelphia

New York San Francisco Chicago

glen Farm, Lancaster, Pa., also proved a great winner in this class. Whether or not he received full justice is not for us to say, but the fact remains that some birds were tampered with and some feathers broken from the birds before judging. It's a damnable shame to have such things happen and the culprit should be caught and hung. For all he made a splendid record and won cock 3-6, cockerel 2-5, hen 1-4, pullet 2-5. Old pen 3, young pen 1, and many specials of merit. This line has also been a favorite winner for many years; they have size color and carriage of the best that comments them.

Later we also heard of other birds that have been tampered with and it is up to the breeders to keep an eye open and to guard each other's birds at every show.

S. C. White Leghorns numbered 187 birds, a compliment to the judge, Mr. Dan W. Young, and he no doubt found plenty of quality among the great long line of coops occupied by this class.

S. C. Buff Leghorns were a surprising large class with 139 birds shown. There was plenty of quality and many males and females better than good. The winners, a grand lot of birds.

S. C. Brown Leghorns, another banner class of mammoth size with 121 birds, entered and shown of good even quality. Males extra.

A very nice class of Blue Andalusians and plenty of them.

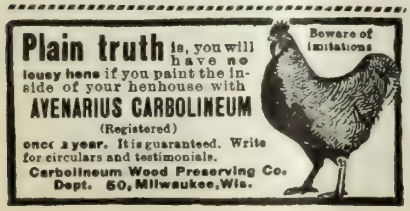
S. C. Anconas numbered 184 birds, A beauty class with size, color and markings seen to advantage. Rose combs a small class.

Silver Campines, a grand class of 55 birds. The Schenley Heights, P. F. won cock 1-2, cockerel 1-2-4. Hens 1-2, Pullets 1-3, old pen 1, young pen 1. Best. Display and all specials. In Golden Campines they won all firsts and seconds competed for.

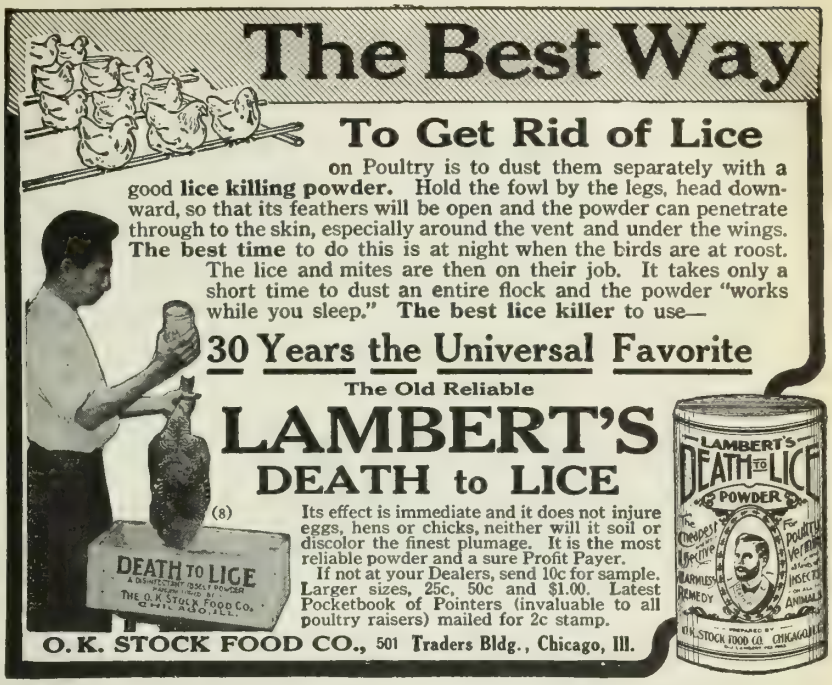
Light Brahmas, a charming lot and good in numbers.

Black Langshans, a class of 52 birds, well shown and select quality.

Ducks, a good collection with all varieties shown.



Pigeons, a very large display and we thought very good.



Geese, a fine lot. The Toulouse of Mr. Frank McMann, very large and fine.

It was a great and grand show, receiving good support and the attendance was very good.

Several display pens along the center were excellent. The pen of Buff Rocks, by Vierheller Bros., one of beauty, and the pen of Columbian Orpingtons, by J. M. Williams, a feature.

In the center of the hall was displayed by Wm. Cook & Son, Scotch Plains, N. J., a large and rare collection of land and water fowls, shown in a rustic lake, quite original and made a show feature. Mr. P. A. Cook told us the names and habits of many of the birds that we had hoped to mention here, but memory and even notes fail us. He has only birds of the best and a collection worth going many miles to see. We would like to see this collection at more shows as they are of special interest to so many.

THE INDIANAPOLIS FANCIERS' ASSOCIATION.

Fourteenth Annual Exhibit Held at Indianapolis, Ind., Feb. 2-7, 1914.

BY H. P. SCHWAB, EASTERN REPRESENTATIVE A. P. J.

INDIANA and the mid-West have every reason to boast of poultry and poultry exhibits and of their breeders. They have and are breeding a very high quality of standard bred poultry which makes possible their beautiful exhibits and the breeders are a loyal and jovial set that we were pleased to meet and hope to meet many times in the future. With Mr. U. R. Fishel as president, Frank P. Johnson as treasurer and C. R. Milhous as secretary things are bound to hum and keep a-buzzing, and from every point of view this show was a great success and of the greatest possible value to the poultry industry.

The attendance was very large and we were glad to finish our work and to mingle in the crowd to meet as many breeders as possible, for there we met Mr. Frank E. Hering, with his Leghorns and Campines; Mac Pierce, of the Buschmann-Pierce Co., displaying their non-fading Reds; Wesley Lanius and Sam Noftzger, with their beautiful Partridge Rocks; the Peerless U. R. Fishel displaying a pen of his "World's Best" White Rocks, and chubby C. J. Fishel, who is on the Wyandotte type, so breeds them; C. F. Rankin from Pittsburgh, the real "Red-Man"; then there was Theo Hewes, of the Inland, and Jas. W. Bell, of the A. P. J., and hundreds of people we met whose memory we will always cherish. Yes, indeed, we had a good time.

The displays were a feature of the exhibit. The entire stage was occupied by the exhibit of the Buschmann-Pierce Co.'s Single and Rose Comb Reds. The birds shown by them were a rare collection of beauty and value. Exceptional shape was the feature noted, closely followed by rich, brilliant red color, sound as can well be, and choice markings. With the decorations of palms and the silver cup, won by this firm, it was a display of particular credit to this firm.

Mr. U. R. Fishel displayed a pen of his famous White Rocks in the center aisle in a large handsomely decorated coop (so they say), but all we could see was the charming birds within. The cockerel, a wonder in form, style and finish, and the females of the same caliber, all shown at their best. The neat heads, long backs and trim bodies all in grand proportion must be seen to be fully appreciated. They are magnificent and the man who can breed birds of that kind has surely done something for all mankind.

Other displays seen were also beautiful and the whole show and exhibit was a most complete and beautiful one.

The great class of Barred Plymouth Rocks was the wonder feature of the show. The club annual meeting was held here and this brought out not only a very large but also a select display of quality. There were just 279 birds of this variety coming from several states and from well known breeders. Mr. Henry D. Riley, Strafford, Pa., won as follows: Cock, 1 and 4; hen, 1 and 6; cockerels, 3, 4 and 7; pullets, 1 and 5; pen, 2; pullet bred young pen, first; cockerel bred pen, 2; club national cup for best cock; hen cockerel and pullet; championship special for best male; special for best shaped male and fifteen other specials. His first cock, one of extreme excellence, fourth, was one of the best cocks we have ever seen. He has wonderful line, barring all over and around him, and the finest of under-barring, was a mite unfinished in tail. He should make a great breeder. In cockerels the competition was very close between the four firsts birds. All were of superior quality. Mr. Riley seemed unbeatable on females and won first hen and first pullet easily. His winning second on account of a pullet going out of condition, but when shown right was easily the best pen, the male a beauty with the finest of color and barring and style. Females all alike and of the best color. This line surely has made its mark east and west and at the best shows.

Mr. C. E. Spaugh, Rugby, Ind., was elected president of the club and celebrated by winning cock, 6; hen, 3; cockerel, 2 and 6; pullet, 2; pen, 1; pullet bred cocks, 3; cockerel, 3 and 5; pullet pen, 1; cockerel pen, 1; cockerel bred hen, 1 and 4; pullet, 1 and 2.

Dewey and Havens, Jackson, Mich.: Cock, 2; hen, 2 and 8; pullet, 4, and pullet bred cockerel first, and specials. This is an old and favorite line.

Mr. W. H. Cavanaugh, Lansing, Mich.: Cock, 3, on a beauty bird of fine shape and color.

G. Earl Hoover, Matthews, Ind.: Cock, 5; pullet, 3 and 8; pen, 4; pullet bred cock, 1 and 2; cockerel, 2, 4 and 6; pullet pen 2, and specials.

Other winners were W. H. Goodard,

first cockerel; E. A. Williams, C. E. Wilhelm, D. M. Sawyer, Gus Strawmyre, E. H. Wise, Mrs. Anna L. Day, Ed. Kitterman, R. W. Hunt, Rohn Bros. D. Heckless, S. P. Pike, C. C. Fritz, P. G. Kirk, D. W. Sawyer, M. T. Bryant, M. C. Arnholt.

In White Rocks with the club meeting also held here it was a great class of 126 birds, the breeders displayed with shape and condition features. Hon. Mr. Walter Reid, St. Johns, Newfoundland, won: Cock, 3; hen, 1; cockerel, 1 and 5; pullet, 5. The winning cockerel one of supreme beauty, elegant form and the best of color and condition. First hen up to highest standard.

Mrs. Melvin Havens, Shelbyville, Ind., won: Cock, 1; hen, 4; cockerel, 3; pullet, 1, 2 and 4. First cock one of the very best, a grand bird in every way. First pullet a gem, fine size and type; second, very close up, best of condition, grandly shown, a little low on legs, beautiful back, breast and body.

Mr. W. J. Brinkley, Iuka, Miss.: Cock, 5; hen, 5; young pen, 1; old pen, 2. First young pen one of superior quality and mating. Strong male.

Mr. C. C. Herron, Hope, Ind.: Old pen, 1, a beauty in all we desire in a pen of highest quality and grandly mated.

Mr. Cecil Clore, Bargersville, Ind,: Cockerel, second, a great bird, up close and finely shown, typical and well finished.

Other winners were: C. A. Mathias, A. H. Magnusen, W. F. Shultz, W. C. Russel, Robt. Bruce, Wm. Plant, J. B. Howe and Standard Poultry Yards.

Buff Rocks a good size class of finest quality, with honors mostly going to A. L. Weckler, Bunker Hill, Ind., and C. A. Paetzel, Hope, Ind. Evenness and sound color a feature.

Partridge Rocks a beauty display, Mr. Sam. Noftzger winning on males and Mr. Wesley Lanius, Greensburg, Ind., on hens and pullets.

White Wyandottes a nice lot, many good birds shown, the winners all of the best and in good condition.

Silver Laced Wyandottes a real beauty class. First cock one of the best seen in years. First cockerel and first, second and third pullets all wonder birds of highest quality. We hope for more like these.

S. C. Reds a large class well shown, with quality and condition a feature. The winners a beauty lot.

R. C. Reds close up and a large hot class.

Light Brahmas one of the four best classes we have seen this year. The display pen of Mr. Johnson, with their egg record (official) was one of the show features.

Black Langshans a royal class of 160 birds the second largest class in the show and the best we have seen in years. Quality was very uniform in all classes. Color of the best. It was a most beautiful exhibit of this favorite old variety. We regret we haven't the winners to give at this time.

First cockerel was won by W. M. Harrod, Flat Rock, Ind.

S. C. Brown Leghorns a good sized class, with many fine birds.

S. C. White Leghorns a grand class of 122 birds. The Willows Poultry Farm, South Bend, Ind., making a superb record by winning cock, 1 and 2; hen, 1 and 4; cockerel, 2, 3 and 5; pullet, 1; young pens, 1 and 2; old pen, 1, and about all specials, having all but two entries placed. Both the first and second cocks were of the best winning type, grand

300 LICE Or More on One Hen

is by no means uncommon. No one would expect to fatten a steer with that number of "ticks" sucking his blood, but many expect the old hen to go ahead shelling out eggs while lice and mites are sapping her very life. We have counted over 2000 dead lice under a row of ten hens, on a roost board painted the night before with Lee's Lice Killer. This great killer does double duty—contact kills mites, lice, bedbugs, etc. about the roosts; the vapor kills lice on the chickens sitting over it. Put up only in airtight cans. For sale at over 10,000 towns.

Three sizes—35 cts., 60 cts., $1.00. Poultry Book free.
GEO. H. LEE CO. Omaha, Nebr.

YOUNG CHICKS

die of bowel trouble more than any other cause. It is estimated that of every 1000 chicks hatched each year less than 400 reach marketable size. Germozone users raise, usually, 90% of chicks hatched. Germozone keeps the bowels regular. It prevents diarrhoea from overdrinking of water; from eating musty or spoiled food, etc. It should be given in drinking water twice a week from the day they are hatched. It stops the loss. Every chick that dies cuts badly into the profit from the rest. Every chick saved will pay the cost of a bottle of Germozone.

One size only, 50 cents, at dealer's or postpaid.
GEO. H. LEE CO. Omaha, Nebr.

GERMOZONE'S Big Value

Is not so much in its great efficiency as a remedy for roup, canker, chicken pox and other diseases of poultry, but it is the greatest bowel regulator in the world for either poultry or stock (including pet stock), counteracting, especially, bowel troubles due to musty, spoiled or improper food. With man, fowls or animals, regular bowels means health. Continued irregularity means some sickness, difficult to cure if not fatal. Thousands give Germozone regularly twice a week to chickens, young and old, at the same time having it ever handy as a ready remedy for other diseases. Sold by dealers or postpaid. One size only, 50 cents.

GEO. H. LEE CO., OMAHA, NEBR.

bodies well carried and full low tails. The first young pen a sweet lot, well shown; a grand line of birds

S. C. Buff Leghorns seen in good numbers and quality.

S. C. Black Minorcas a great class of this variety of 74 birds. The winners and many others of superior quality.

Buff Orpingtons a class of 95, with many specimens of rare quality. First cockerel and hen superb in quality.

White Orpingtons also a class of 95 birds and one of credit alike to the breeders and the exhibit.

Both Bronze and White Turkeys were feature displays, with the best of size and quality.

Ducks found a large class, with all varieties seen to advantage.

Bantams a full collection.

Pigeons a very large display, with the largest and best display of Pigmy Pouters we have seen. Jacobins also a large beauty class.

It was a large, well displayed, clean and evenly balanced show. The awards were quickly placed and the cash was there to pay all premiums on Thursday evening. Evident satisfaction was heard on all sides with particular praise for the officials who had the exhibit in charge. It was an example of what can be done and what is being done to further the interests of standard bred poultry the country over, and we were greatly pleased at the opportunity to attend this beautiful exhibit, for we can fully appreciate it and see in it glory enough for all.

THE PITTSBURGH FANCIERS' SHOW.

Sixteenth Annual Exhibit Held at Pittsburgh, Pa., Feb. 16-21, 1914—A Real Fanciers' Show and a Beautiful Exhibit.

By H. P. Schwab, Eastern Representative A. P. J.

For sixteen years the Pittsburgh Fanciers' Association have held their annual exhibits and have closed the Poultry Show year in a blaze of glory. We would travel the whole world over and not find another such set of breeders as the members of this Association and the breeders who have for years shown their birds here. They are the real, dyed-in-the-wool kind, ever faithful to the fancy and brim full of sociability—a fitting yearly close of the show season.

The officers of this Association are to be commended and are among the best known breeders. President Moore and Vice President Seldon were breeding and exhibiting forty and more years ago, while Treasurer Hilldorfer and Superintendent Skiles and F. L. Ober are not far behind and are known the country over for their breeding ability and their work for the fancy, and Secretary G. C. Sutch has always had three likes, his family, Barred Rocks and hunting. Others, such as L. E. Vierheller, C. F. Pourteous, J. B. Foster, P. S. Randolph and W. P. Wetzler, are in the same class, all fine breeders and all fine fellows.

This year they had to limit the entries to insure wide aisles, seats and decorations. The result was a most beautiful show with plenty of room to see the exhibit properly and to rest and visit. The decorations were grand; the walls were hung with rosetted flags, and the palms, shrubs and flowers were all seen

CELLULOID LEG BANDS

Made in Seven Colors—Red, White, Blue, Pink, Amber, Black and Ruby. They mark your poultry so that you instantly know without handling, individual birds, one mating from another, and pullets from hens. Prices: 12 for 25c; 25 for 50c; 50 for 85c; 100 for $1.50.

Bands for Half-grown chicks in Five Colors—Red, Blue, Pink, Amber and Black. Prices: 12 for 25c; 25 for 40c; 50 for 75c; 100 for $1.25

Baby chick bands in Six Colors—Red, Blue, White, Amber Pink and Black. Prices: 12 for 20c; 25 for 35c; 50 for 60c; 100 for $1.00. Address all orders to

to advantage, giving a midsummer appearance to all.

The display pens were a feature of the show. The Schenley Heights Poultry Farm, Pittsburgh, Pa., with Mr. C. F. Rankin, in charge, displayed a pen each of Single and Rose Comb Reds. This strain has made a wonder record this year, winning at Allentown, Hagerstown, Philadelphia, New York Palace and M. S. Garden, Pittsburgh, etc. Mr. Rankin is full of vim and has a great line of birds.

Mr. Honus Wagner, the famous Pirate ball player, displayed a pen of his Buff Rocks. They were beauties, and if he can mate and breed these as well as he hits the ball, then we will hear and see more of this line.

Mr. F. L. Ober, Verona, Pa., exhibited a pen of his Reds and included in his display his famous first prize M. S. Garden, New York, hen. She was a feature of the show, a most beautiful hen of extreme value.

The sensation of the show was the display of Buff Rocks by Vierheller Bros., Pittsburgh, Pa. The cockerel, a wonder in shape and of richest and soundest of color, small straight comb and beautiful head. The females all alike, of same shape and color. They are just the kind we have been looking for.

The Birds and the Winners.

Barred Rocks, a quality display. Mr. J. A. Yant, Canton, O., won. Cockerel 1-3, pullets 1-4, pen 1, cockerel pen 1. Both pens were extra quality and first cockerel a bird of fine type and very fine under-barring.

Mr. C. F. Porteous, Wilkensburg, Pa., won, hens 1-2, pullets 2-3, pullet pen second. First hen a beauty of right color and barring. Pen very fine; both shown were of fine, rare quality, and awards were placed according to matching of females. Mr. Porteous breeds the female line only.

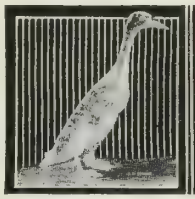
Miss Marie Hilldorfer, Pittsburgh, Pa., won, cock 1-2, cockerel 5, hens 3-4, which was going some. Both cocks were large and fine birds of grand color and markings.

Mr. John Foster, Pittsburgh, won about all in Buff Rocks with cock 1, cockerels 1-2, hens 1-3, and pullets 1-2, and pen 2. Good type and color noticeable.

In Columbian Rocks, F. G. Bean, Collegeville, Pa., won all awards of note, including all first prizes.

White Rocks were a large and beautiful display, one of the best at the show, and it took the best to win.

The Woodlawn White Rock Farms, Crafton, Pa., Mr. L. T. P. Reinecke proprietor, won, cock 1, cockerel 4, hens, 2-3-5, pullets third and pen second. First cock was a noble, big bird of grandest form and nice head. Third pullet a mite young, but one of the best and full of promise. Ideal form and the best of color and style.



Mr. Chas. W. Voskamp, Pittsburgh, also made a fine showing and won, cock 4, hen 1, cockerel 3, pullet 1. Mr. Voskamp has been breeding for some time and has bred his line up to very fine quality. His winning hen and pullet were very worthy birds.

Buff Wyandottes, a beauty class with shape, color and fine head points a feature.

Columbian Wyandottes a rich, large class well shown. The winners were very fine in shape and markings.

Silver-laced Wyandottes a small but

very select lot. Quality was of the very best.

Partridge and Golden Wyandottes—Good classes of nice birds. Rich color and markings noticeable.

White Wyandottes—A very large, strong class, well shown and the winners very fine. A grand, strong class all through. Good health and condition features.

The Black Orpington class was a royal one, just teeming with quality. Shape, color and condition were seen at their best in the birds shown. Mr. L. O. Kettering, Pittsburgh, Pa., won, cock 1, cockerel 2, hen 1. It is hard to imagine better birds. The first cock a screamer and seen at his very best; beautiful size and form and the best of color and condition. Such quality is fit to win at any show. First pen a beautiful collection of best quality, grandly mated and headed by a noble male. Mr. Kettering has bred and shown for years and has brought his line to the very front ranks of great winners.

Mr. Kettering also breeds Buff Orpingtons and won, cock 1-2, hens 1, pullets 1-2, and pen 2. He sold the first prize cockerel. His line has shape and sound color.

Mr. H. P. Kettering, Pittsburgh, owner of the Sycamore Springs Farm,

Young's Strain
S. C. White Leghorns

I HAVE NO OTHER BREEDS

They are the standard for all the Leghorns of all America, and the greatest layers of all domestic fowls.

FIRST PRIZE COCKEREL MADISON SQ. GARDEN, NEW YORK, 1912-1913.
BRED & OWNED BY D. W. YOUNG, MONROE, NEW YORK.

At the World's famous and Premier Show of America at Madison Square Garden, New York, for the past 13 consecutive years I have won best display and from three to five first prizes, every bird being bred and raised by me.

Winnings at Madison Square Garden, winter of 1913, were as follows:

A STUPENDOUS VICTORY

Cocks, First, Second and Fifth
Hens, Second, Third and Fourth
Cockerels, First, Third, Fourth, Fifth
Pullets, Fifth
Pens, First
Groves Trophy, value $500.
Elmhurst Sterling Silver Cup, value $150.
N. Y. State Cup, value $50.
N. S. C. W. Leghorn Club Medal for best cock, best cockerel, best pen and best display.
The Association $10 Gold Special for best display and Grand A. P. A. Medal, value $50, for best bird in whole show, all var. competing.

This bird is the most superb specimen that has ever been produced of any variety. This achievement was made possible from a thorough knowledge and scientific practice of line breeding for over 35 years, and from a strain that has been bred by our family since 1855, making it the oldest strain of Leghorns in all the World, the male line never having been broken by adding new blood. The **Young Strain Characteristics** follow through all my yards and my matings this year should be superior.

WATCH the Show Reports throughout the United States and Canada, and you will find that Young's Strain predominates and wins the coveted prizes and lays the greatest number of eggs.

Hundreds of the grandest cockerels ever bred, for sale. **Remember you cannot win without my strain**

MATING LIST FREE, ADDRESS

D. W. YOUNG, E-3, MONROE, NEW YORK

was very successful in his several varieties. In Buff Orpingtons he won, pullets, 4. In Rose Comb Whites, he has long been a leader, having won at Madison Square Garden, New York, etc. Here he won in a large class: Cock, 2; cockerel, 2; hens, 2; pullets, 3 and 4. In Mammoth Pekin ducks, old drake, 2 and 3; old duck, 1 and 2; young drake, 1; duck, 1.

S. C. Reds—A beauty class, full of quality, shape and sound; color admirable. Mr. Ellis S. Shelly, Williamsburg, Pa., made a grand win here with a rich line of quality, birds winning, cocks 1-2, cockerels 1, hens 1, pullets 1. His first cockerel was awarded the championship special for best cockerel in the show. He also won the shape and color specials.

In Rose Combs the class was also well filled and of the same beauty quality. The winners very select.

Black Langshans, a small class, but with the best of quality. The same can be said of the Black Javas.

S. C. Brown Leghorns, a dandy class, full of the best of rich quality. The first hen, one of unusual beauty.

S. C. Buff, also a strong, large class of grand birds, the winners of particular worth and beauty.

S. C. White Leghorns, one of the three best in the show. The first cockerel a beauty in form and condition. All winners of superb quality. The Leghorn classes were a compliment to Judge Punderford.

S. C. White Orpingtons, a banner class and just as good in quality as in numbers. Judge Minich lost some hair over his job here and did classy work. The Green Ridge Poultry Farm, Inc., Green Ridge, Md., were the big winners with their "Cook strain" of birds, taking cock, 1; cockerel, 1 and 2; hens, 3 and 4; pullets, 1 and 5 and pen, 1, with all specials. Theirs was a beauty display of choice birds grandly shown. The winning cock a very rare specimen of shape and color and strong head. First pullet a beauty, white as the snow that was driving outside.

S. C. Black Minorcas, a real good class of good birds, birds of nice form and carriage and sound color.

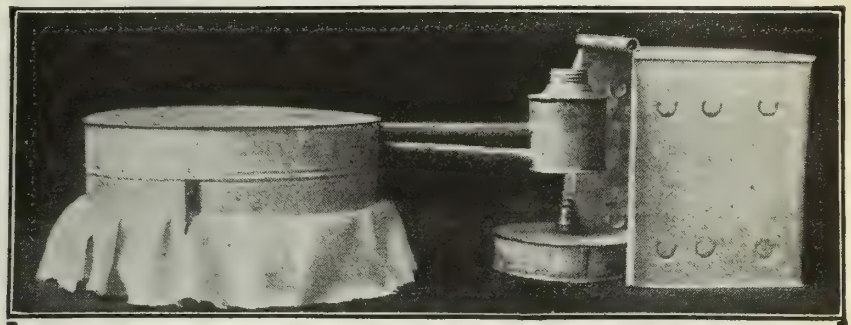
Houdans, a small class, we regret.

Anconas, another strong class well shown; the winners were J. W. Dickson, C. W. Simonds, W. J. Fulton, Morris Cockeroft, Henry Cockeroft and F. A. Wolfe.

Dark Cornish, a fair sized class of fine birds. Blue Andalusians, very good, and a generous display of Hamburgs, Butter Cups, Polish, etc. Two standard game cocks, shown by Mr. Wash Moore, were features of the exhibit.

Bantams were a hot class all through, and in particular the Buff, Black and White Cochins. They were without doubt the best classes of these I have ever handled. Rose Comb Blacks and White Polish were close up, followed by the Games and Seabrights.

A fifty-pound bronze turkey was the attraction and a show feature. His nibs is a beauty and he strutted around his pen as if he were the largest thing at the show until he seen Jim Skiles, when he went to roost.



The show from first to last was a big success. The attendance very large, and business from reports exceptionally good. The exhibitors were happy and the visiting public enjoyed seeing fine quality birds and plenty of them.

This is one of the country's oldest associations. May they live long.

This illustration shows the first prize and silver cup exhibition pen of Barred Plymouth Rocks, and cockerel heading second prize pen at the last Madison Square Garden, New York, Show, winter 1913-1914. These birds are owned, were bred and exhibited by E. B. Thompson, Amenia, N. Y., originator and breeder of the world renowned Imperial "Ringlet" Barred Rocks. At this show the Imperial "Ringlets" won both first and second prizes on exhibition pens; first cock; all the prizes offered on cockerels, viz., 1st, 2nd, 3rd, 4th and 5th; and numerous cups and special prizes. Mr. Thompson's last three exhibits at Madison Square Garden have been rich in prizes; at every one of these shows his Imperial "Ringlets" have won first prize cockerel and champion male; first and second exhibition pens, besides other firsts, cups and specials in great numbers. The "Ringlets" have won first prizes at New York for more than a quarter of a century.

THIRD ANNUAL INTERNATIONAL EGG LAYING CONTEST.

Report for the Month Ending Feb. 28, 1914.

By Wm. F. Kirkpatrick.

ENGLAND is still leading in the International Egg Laying Contest at Storrs, Conn.

Not only that, but the English pen of White Wyandottes has increased its lead from 86 eggs on February 1st to 120 eggs on March 1st, or at the close of the fourth month. Weather conditions at the competition plant were most uninviting during the month of February. With the single exception of the first day of the month the minimum temperature ranged from a few degrees below freezing to 6 degrees below zero every day in the month. More snow fell during February than in any other corresponding period in many years.

In the face of adverse weather conditions, however, and in spite of the short month the hens laid more than twice as many eggs as in January, or a total of 8,760, making a grand total of 18,207 eggs. Thirteen individuals, including White Rocks, White Wyandottes, Buff Wyandottes, Rhode Island Reds and White Leghorns laid 20 eggs each or more during the month. The eight best individual scores for the first four months of the competitian are as follows:

Pen.	Eggs.
14—English White Wyandotte.....	85
35—New Hampshire R. I. Red.....	79
14—English White Wyandotte.....	73
21—American Buff Wyandotte Club.	73
35—New Hampshire R. I. Red.....	72
40—Experimental White Leghorn...	72
4—New York Barred Rock.....	71
30—Pennsylvania R. I. Red.....	71

Awards for the month of February have been made as follows: The blue ribbon, or first prize, goes to a Pennsylvania pen of Rhode Island Reds owned by Dr. J. A. Fritchey, of Harrisburg, Pa. which laid 161 eggs. The English pen of White Wyandottes owned by Tom Barron got second prize for the month with a production of 159 eggs. Dr. N. W. Sanborn, Holden, Mass., captured third place for the month with his Buff Wyandottes, which yielded 151 eggs for February. Geo. P. Dearborn, Lake Como, Fla., and A. B. Brundage, Danbury, Conn., receive honorable mention, as their two pens of Rhode Island Reds followed closely with 150 and 148 eggs respectively.

Destroying Lice.

With the approach of spring the lice problem naturally becomes somewhat more serious than through the winter. Heretofore the lice on the Competition Plant have been held in check by dusting the hens with a commercial lice powder that seemed to keep the lice down fairly well if applied often enough. The objection, however, to the ordinary lice powder is that it does not as a rule destroy the eggs or nits, so that, while a hen may be entirely freed of lice by the use of the powder, such eggs as are left will hatch out in the course of ten days or less and the bird is lousy again. The Storrs Experiment Station has therefore been led to the use of a simple salve which it is believed will prove more effective. This salve is nothing more or less than ordinary blue ointment or mercurial ointment mixed with equal parts of vaseline. It must be understood, of course, that this ointment is very poisonous, and care must be exercised in its application. After mixing the blue ointment and vaseline in equal parts, take on the end of the index finger an amount

of this mixture equal in size to a small pea or a large grain of wheat, then burrow into the skin about an inch below the vent. It is, of course, well known that if there are any lice on a hen they will in all probability be found in the region of the vent. The eggs of the lice are deposited in this place. It appears that a very small application of this vaseline-blue ointment treatment destroys the eggs and therefore does away with the future crop of lice. It should perhaps be remarked that any who have not tried this remedy and desire to investigate its merits should at first try only a few birds in order to make sure that too much of the ointment is not put on and that it is applied at the right place or else the hens themselves may be injured or actually destroyed by mercurial poisoning. Furthermore one should not expect the hen to become absolutely free from lice for a few days, because the treatment may not reach the lice on other parts of the body. As an illustration of what this treatment accomplishes, one pen in the Egg Laying Contest was treated in this way by its owner before being sent to Storrs. Close inspection of this pen on March 1st revealed no lice, whereas the birds in the adjacent pen were found to be lousy.

Experimental Pens.

In some ways the standing of the experimental pens at the close of the fourth month is much the same as has been previously reported. In both the Plymouth Rock and Leghorn groups, the pens that are receiving neither green food nor beef scrap are the lowest producers. In the Plymouth Rock group, the pen that receives the regular contest ration with the addition of sour milk but without any green food leads; whereas in the Leghorn group, the pen receiving the regular contest ration with addition of sour milk but without any beef scrap is leading. If we combine these two groups, it will be seen that the addition of sour milk to the regular ration makes for higher egg production except in those cases where neither beef scrap nor green food is supplied. The experimental pens have not been listed in the ten leading pens given below, but as a matter of fact two of the Leghorn pens occupy third and tenth places with a total production, the 1st of March, of 515 and 366 eggs respectively. It is interesting to note in this connection that these Leghorns were just five months old when the contest opened on November 1st last. A few weeks ago the writer was discussing this question of sour milk for growing chicks with a Connecticut poultry man, who brooded 7,000 chicks last season and who had used the sour milk freely for the first time. This breeder was of the opinion that in his case the milk was responsible for developing his pullets a full month earlier than he had ever been able to do before.

The ten leading pens at the close of the fourth month are as follows:

Tom Barron, Catforth, near Preston, England, White Wyandottes, 650; Francis F. Lincoln, Mount Carmel, Conn., White Leghorns, 530; Neale Bros., Apponaug, R. I., White Wyandottes, 478; Merrythought Farm, Columbia, Conn., White Wyandottes, 470; Dr. J. A. Fritchey, Harrisburg, Pa., S. C. Rhode Island Reds, 458; Cecil Guernsey, East Cobleskill, N. Y., White Leghorns, 429; Jules F. Francais, West Hampton, L. I., N. Y., Barred Plymouth Rocks, 382; Geo. P. Dearborn, Lake Como, Fla., S. C. Rhode Island Reds, 380; Pinecrest Orchards, Groton, Mass., S. C. Rhode Island Reds, 345; Tom Barron, Catforth, near Preston, England, White Leghorns, 336.

FIRST PRIZE ANCONA PEN AT MADISON SQUARE GARDEN, CLEVELAND, H. CECIL SHEPPARD, BEREA, OHIO.
COPYRIGHTED

Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.

WHEN one hears of trap nests here in the Northwest, his thoughts turn to D. Tancred, Kent, Washington, the man who has made trap nests famous in these parts. Mr. Tancred commenced to trap nest ten years ago. He has kept it up persistently ever since and what is better he is now able to give results that are valuable.

To trap nest on a large scale that requires a man's whole time given to that work alone—which is the case where from 1,500 to 2,000 fowls are trapped, is a tedious, nerve racking, job. No ordinary farm hand can be considered serviceable for such work. Nor can it be parcelled out among a lot of irresponsible students if any dependence is to be placed on the records. Responsibility is the keynote of this work. One person must trap the fowls from the beginning of the year to the end and must be held solely accountable for its correctness. A good physique is required in this work. Many miles of walking are included in a day's work and the removal of say, one thousand to twelve hundred fowls from the nest and the recording of that number of tallies on the laying charts means quick, deft work and not a single wasted motion. Good mental and moral quality is also vitally necessary. The man handling a big trap nest job must be observant and able to concentrate all his faculties upon his work and keep them concentrated all day long, and that requires no mean mentality and an equable temperament besides. It goes without saying that the man on the job must be honest and in every way dependable. Last, but by no means least of all, he must be fond

"Lillian Russell," otherwise No. 06. A Tancred Farm White Leghorn, with a pullet year record of 278 eggs. Hatched Jan. 25, 1912; laid first egg July 18, 1912.

of his job and a lover of fowls, otherwise he would find the work unbearably irksome in a month's time. It is hardly to be wondered at that the man in charge of the trap nest on this big Washington breeding farm is paid better wages than many college professors. Nor is it surprising that the owner of the establishment considers the records made at his place a trifle more reliable than official records of many experiment stations. In this connection I may here remark that it would be interesting to know just how the records are made at the experiment stations. Oddly enough, in all cross fire or argument and criticism occasioned recently by the alleged laying records made by scrub fowls at one of the colleges, not a question has been asked regarding the Modus Operandi, surely the performance of these world's champion layers must have been tallied by no less a person than the gentleman in charge of the department of poultry husbandry himself. It is not conceivable that he would stamp as "official" and "world's greatest," a record made by relays of students or by the common or garden variety of hired men.

On the Tancred farm one man has kept on the job at all times. He is there the first thing in the morning and leaves with the sun at night. His work is to see that each and every hen is lifted from the nest and the band on her leg must be looked after. He must record the egg she lays and take care that he does not get the check or tally opposite the wrong leg band.

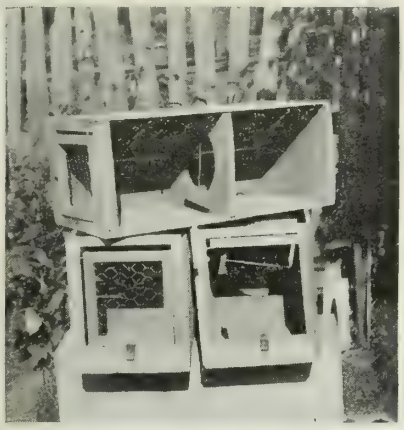
cost no more from the famous

Flanders' Strain of S. C. W. Leghorns



This strain won the largest number of high prizes at the National (Official) Poultry Show, Chicago, Dec., 1913. It is at the head of the list. Our Specialty is Prize stock because to win high prizes a strain must be pretty nearly perfect. And yet Eggs, Matings, Day-Old Chicks, etc., from this prize strain cost no more than inferior stock elsewhere. And you eliminate all risk, as we rigidly guarantee every shipment, large and small, of every kind. We can do this because our stock is the highest grade that ample range and modern equipment can produce. Orders are increasing daily for early Spring delivery. Book yours now. Pay only when you order shipment forward. Write for catalogue of this greatest Prize-Winning Strain, by return mail.

FLANDERS' WHITE LEGHORN FARM, Box A, ORCHARD LAKE, MICHIGAN

average of four times a year for the last eight years and never have we been there unless we went through the trap nest houses and at no time have we ever found the man off the job. These records we think as authentic as can be made by man.

Mr. Tancred trapnested sixteen hundred White Leghorn pullets last season. Out of this number he was rewarded with 158 hens that laid over two hundred eggs in their first pullet year. Fifteen hens out of the 158 reached the high mark of 240 eggs. Mr. Tancred calls these his "Royals." He had one hen that made 282 eggs, while another made 278 and a third 270. Below we give a picture of the hen that made 278 eggs and her chart record for the year. We liked this hen the best from a fancier's standpoint and pictured her instead of the 282 hen, who was also a Leghorn of good type.

The average of the sixteen hundred hens was 174 eggs each. Mr. Tancred believes that had not some of the hens (pullets) died during the year his average would have been greater. The hen that laid 282 eggs was from a mother that laid 260; her grandmother was in a pen that made over two hundred eggs. In order to keep track of these hens, Mr. Tancred toe marks each bird and bands them with seal bands. Out of hens that laid 240 eggs he hatched 31 pullets that averaged better than 200 eggs each. These chicks were hatched with hens and they were toe marked at the time that they were hatched. Most of the hatching is done with incubators on this big ranch and most of the chicks are brooded in the room brooders. At the time of my visit (March 10) there were 782 little January 18 hatched chicks that were nicely feathered out and doing fine. The day was ideal. Sun shining, and the way that big band of little fellows were mowing down the grass was a caution. In another room brooder there were something like a thousand baby chicks, three weeks old.

Maine Experiment Trap Nest. Kind Used on Tancred Farm.

These were also doing fine. I was out at midnight with Mrs. Tancred to see how the youngsters were doing. The night had turned cold and we had a big frost the next morning. At the time we first went out the temperature was a little low, and the youngsters were beginning to bunch, but they were soon put in their places and the lamp turned up and room soon heated to the required temperature.

It had been Mr. Tancred's plan to hatch a lot of chicks with hens and allow the hens to brood them, but he says that if it were not for keeping track of his pedigrees he would do all of his hatching and brooding artificially. He says that he can see little, if any, difference between those hatched with hens and those under incubators.

Mr. Tancred does not agree with all trap nest authorities on the question of transmitting the laying qualities. He finds that hens will often transmit those qualities to the pullet as often as she will to the male. He is careful, though, to always breed males from high laying record dams and in that way they get their laying qualities from both sides of the house.

Mr. Tancred might be said to be the brains of the farm. He is an invalid and must go around the farm in a chair. He has lost one of his legs and has little use of the other, in fact, finds it hard to get around on crutches, but despite that fact he is one of the most enthusiastic poultrymen that I know of. He seldom has a chance to mingle with the poultrymen, but he has a pile of visitors who call on him and they swap all of the gossip in poultrydom with him. He is a great reader and keeps posted in all poultry matters and writes a great deal for the poultry press of the Northwest.

My idea in giving this trap nest article is to tell the readers what it means when a man advertises trap nests. I am sending a photograph of the trap nest

If you want GRAND LAYERS or SHOW BIRDS, write me your wants
F. S. SMITH, Box C and D, Hamilton, Ohio

used. It is the Maine experiment station nest and it gives splendid satisfaction and is easily made and easily operated by the hens as well as the attendant.

The price of eggs has begun to go down and is now around 20 cents per dozen. The year of 1913 will go into history as one of the best years we have had for some time in the matter of price of eggs, despite the fact that they reached their lowest level last March. Seattle, for some reason our best market, shows the following for the year of 1913:

	First of Month.	Middle of Month.	Last of Month.
January	36	30	30
February	28	20	18
March	18	19	20
April	21	22	23
May	23	22	23
June	25	27	28
July	28	30	30
August	32	34	34
September	35	40	44
October	44	45	50
November	52	55	52
December	50	45	45
January, 1914.	44	35	38*
February	38	23	20

*Unexpected raise the last of January on account of big Alaska shipment of eggs when cold storage were exhausted. This is liable to happen at any time that Alaska ships leave and cold storage eggs are short.

One beauty about the climate of the Northwest, we never have weather so warm as to spoil eggs in summer. Our nights are always cool enough to demand a blanket on one's bed, and take it from us, one finds use for that same blanket before morning. I have lived in the Northwest (Tacoma) for the last twenty-five years and I never saw the night which I could go all night without cover. I had a sample of the Eastern kind of weather last summer, when I went as a delegate to Atlantic City. When I left

D. Tancred, Kent, Wash.

home I was wearing an underwear that is used here in winter. By the time I got to St. Paul I had changed to a light knit variety. At Atlantic City I cut the sleeves off up to my elbows and the others off at the knees, but when I hit St. Louis I cut the sleeves off up to my shoulders and would have gladly gone without the rest of the suit if the sun had not been shining so brightly, and I did not, unlike some of the ladies, care to tackle the x-ray kind of apparel.

The question of show rules are now up to the committee of three appointed at Atlantic City. These rules can be made just to the liking of the poultry show managers, provided they will come through and tell the committee just what they want. The chairman of the committee is W. B. Atherton, of the Boston Poultry Association. The other two members are Charles D. Cleveland, of the Madison Square Garden poultry show, whose address is Eatontown, N. J., and Harry H. Collier, Tacoma, Wash. This committee desires the views of the show managers, and if you do not get what you want it is your own fault.

There has been quite a little controversy here in the Northwest over the fact that the Oregon experiment station gave out a bulletin in which cross-breeding was recommended to the farmer. One thought seems to have escaped the two parties to this controversy. In mongrelizing the fowls one mongrelizes the eggs. In other words, cross-breeding is sure to bring different colored eggs as well as different sizes. Leghorns, Minorcas, Campines and those breeds noted for egg production, generally lay white eggs. The medium weight fowls, such as Plymouth Rocks, Wyandottes, Rhode Island Reds, all lay brown or tinted eggs. If we cross our Leghorns with one of the middle weight fowls, we are more than bound to get eggs of different colors as well as different sizes. The egg that will sell the best in market is one that is graded

WINNING BARRED PLYMOUTH ROCKS

In a class of 213 birds, bred and shown by America's Leading Breeders in one of the largest and best classes ever exhibited, I won **Special First for Best Cockerel,** Mating Pen, Second Pullet Mating Pen, Fourth Exhibition Pen, **First and Third Pullet-bred Cocks,** Fourth Pullet-bred Cockerel, Second and Third Cockerel-bred Hens, Second and Third Cockerel-bred Pullets. **Specials, etc.** A record of merit in all classes.

Palace, New York Show, 1912

In a class of "Royal Merit" my winning First Prize Pullet was the sensation of the entire class. I also won Second Pen, Second Hen, Fourth Cockerel and Specials. At **Madison Square Garden, New York, 1912-13,** I won Seventh Pullet. This line has been bred for years in line and has made records at several shows. Choice stock for sale at all times, selected breeders a specialty in trios and pens, mated to produce superior quality. **Eggs for Hatching** from selected exhibition matings, $10 per setting. Utility mating eggs at special prices of $8 per one hundred. **Baby Chicks,** $9.00 per fifty, $15.00 per one hundred. Write me your wants, I can and will please you. My utility lines are exceptionally heavy layers. When writing please mention American Poultry Journal.

JOHN D. G. GENNERICH **MOUNT KISKO, NEW YORK**

to color as well as to size. To ship a bunch of eggs of all colors of the rainbow is simply foolish. No vender of eggs likes to put out a mixed colored lot if he can get straight whites or straight brown. The one-colored egg, one-sized egg looks better to the average buyer.

There is little to be gained in crossing any thoroughbred fowl. To cross a Leghorn with a Plymouth seems worse than foolish. Some of these crosses have been known to lay well, that is, the first cross, but to follow up the cross simply gives one a lot of mongrel-colored as well as off-shaped fowls. The egg question is one that should be thought of. The egg problem is simply one that is purely commercial. You sell your best fruits assorted to one shape and color. No good fruit dealer would think of sending a "Delicious" packed with a lot of Gravensteins, nor would the grower of Spitzenberg apples think of mixing them with a lot of Ben Davis apples. He sorts his apples and tries to get the most heightened colors, as well as best shaped, in the same boxes. We should be just as careful of the product of the hen.

If one will take a crate of chickens to market, all running uniform in size as well as color, he will find that the market will take to them more readily than it would if these fowls ran all weights and all colors. If he would dress his fowls for market, the market would buy quicker if they ran all of one size. In the restaurants here on the coast the caterers seem to want a broiler that will weigh about one pound. That is, when broilers are plentiful. They will give a better price for a uniform lot of dressed broilers than they will for those that will run to all shapes as well as weights. What a restaurant likes to serve is either half or a whole fowl for so much. If these fowls will run about a pound, then they know just what they can serve their customers and the profit in each order.

———o———

Editor American Poultry Journal:

Dear Sir.—Election Commissioner McCord has just reported to me that through the unsolicited vote of nomination the members of the American Poultry Association have placed my name in nomination for president, first vice president and second vice also, and through these columns I wish to thank these friends for this act of confidence and show of appreciation of my past work with the Association.

Those of you who were present at the inauguration of officers at Atlantic City will call to mind my remarks pledging my undivided support and hearty coöperation to the administration of President Thompson, and at this time, while thanking you for your kindness in making this nomination, feel that in fealty to the administration I must decline in making the race for president of the American Poultry Association.

However, should you so vote in this election to place me in a minor position, that I may be enabled to continue the education in the national work and aid in every manner possible the administration with which I am enabled to work, I trust your confidence will feel repaid with the services rendered.

Yours, fraternally,

ARTHUR A. PETERS,
President Colorado Branch.

"The Back Yard Farmer."

The joy a back yard garden can furnish! One who has never experienced it can realize what it means in reading "The Back Yard Farmer," a new book by J. Willard Bolte (Forbes & Co., Chicago, $1.00); and if he is a flat-dweller he will be tempted to make plans for moving to the suburbs immediately. And if he is seeking a solution of the high cost of living problem he will be sure to go; for this valuable book solves that question. And not only does it show how to reduce the expense of food but it also tells how to get better food and better health and get dividends and pleasure out of the wonderful possibilities of the back yard.

The seventy-five chapters of this useful book give complete and reliable directions for the best cultivation of vegetables, fruit and flowers, the management of poultry and pets, the proper care of the lawn, vines and shade trees, and discuss everything pertaining to the outdoors of the suburban, village or country home.

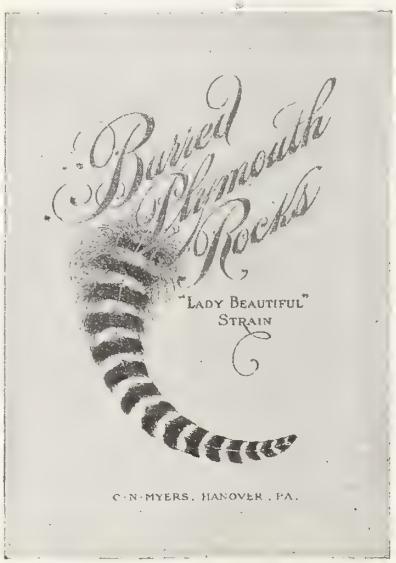
Poultry Publicity



by Louis A Stahmer

THE FOREMOST requirement in the advertising of any commodity is "attraction." Whether you are advertising coffins, cough drops or chickens it makes no difference. "Attraction" must be the keynote. In these days of competition it is almost absolutely necessary to make your advertising as attractive as possible in order to distinguish it from your competitors. Advertising space in high grade magazines is far too expensive to experiment with and instead of an investment is liable to become an expense for the reason that the copy does not pull and present an attractive appearance and lead the arguments of the advertisement or other printed matter of your competitor.

"Attraction" and argument must go hand in hand in every good piece of advertising copy; they must, so to say, "back up" each other. An attractive ad without the punch is a waste of effort. Attractive publicity is in perfect harmony with the poultry business, for nearly every breed of poultry has some kind of claim on beauty. In fact, some of the varieties are almost art creations. Does it not look reasonable therefore that advertising of all kinds pertaining to this subject should harmonize?

You would not expect a dainty catalogue done up with a nice blue silk ribbon from a machine manufacturer who sells heavy machinery for mining operations, neither would you look for a great big book from a high grade milliner, for the reason that the first impression of a catalogue must be convincing enough to make the reader willing to look further and peruse all the matter. That some of the poultry breeders have the knowledge of preparing result bringing advertising copy and printed matter is very much in evidence in the many fine catalogues that have been received at our office this season. While our space for this article is limited to mention all of them, yet we cannot refrain from calling attention to the more pretentious ones.

One of the best catalogues received at our office for some time is that of Hugh

A. Rose, the well-known Orpington breeder of Fonthill, Ont., Canada. As a convincing piece of publicity this book is certainly in a class by itself. The cover is printed in green, red, black and gold and is heavily embossed and through a cut-out in the center a head of one of Rose's magnificent Buff Orpingtons is shown. Beautifully printed on high grade paper and containing many fine illustrations it is altogether a book well worth while sending for.

Another fine book is that of C. H. Myers, the well-known Barred Rock breeder of Hanover, Pa. It is better than any other that has come to our office in years, classy from cover to cover. The catalogue of the Bridgewater Poultry Farm, Libertyville, Ill., P. O. Hawthorne, is chuck full of information about the well-known Red Raven strain of Rhode Island Reds. The cover is attractively printed and embossed in gold, blue and red and from an artistic standpoint it excels. The book contains numerous illustrations of some of the famous New York, Chicago and Cleveland winners and also a mating list describing their many pens of as fine Reds as grow.

Robert Walden of Middleburg, Md., has sent us the neatest little mating list on Barred Rocks that has ever come to our desk. It will be remembered that Mr. Walden has been connected with thoroughbred horses for years and his racing colors are violet and white. This same color scheme has been carried out in his mating list and presents an unusually artistic effect.

Frank E. Hering, the well-known White Leghorn breeder of South Bend, Ind., has issued a beautiful mating list. The cover printed in gold on green stock and heavily embossed makes a very fine appearance. The booklet is well illustrated with many of his Chicago, New York and Indianapolis winners and is well worth sending for.

A. E. Martz' Buff Orpington fashion plate book is in a class by itself. Anybody who knows Martz of Arcadia, Ind., and has purchased stock or eggs from

Riley's Barred Plymouth Rocks

Have been consistent winners at America's leading show MADISON SQUARE GARDEN

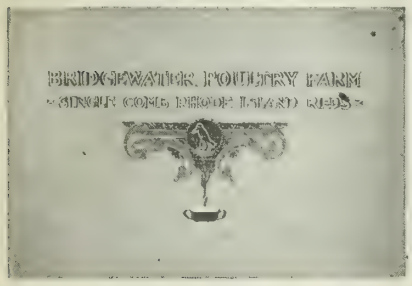
This season, in quest of new fields to conquer, they made a record of unparalleled importance at two of the largest Shows,

BOSTON—INDIANAPOLIS

It is one of the prerogatives of many breeders to boast of the laurels they have won, themselves, at different shows, with birds they have raised and shown, which only goes to show that they are raising birds of that description for themselves. I would rather boast of the fact that I am able to supply my customers with eggs from which they raise the winners. Here is an example:

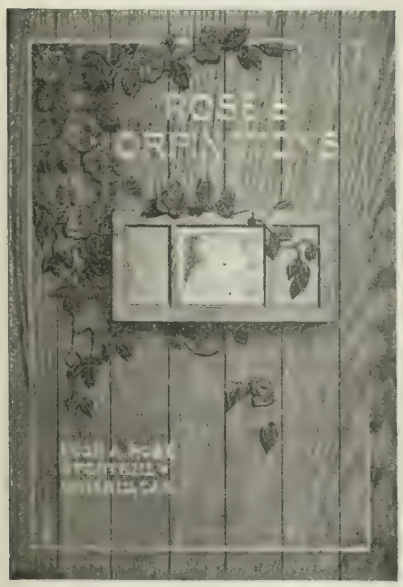
Darien, Conn., Feb. 10, 1914.

Dear Sir: I am pleased to report result of hatch. Out of the eggs from Pen No. 4 we raised five Cockerels and two Pullets. With three of the Cockerels we won First and Second at Stamford, Conn., in the open class and the other Cockerel headed the First Pen. Judge C. H. Welles (who has judged at New York) pronounced him in a class by himself **and good enough to win at Madison Square Garden.** Yours truly, (Signed) P. G. SEXTON, Supt.



I have produced winners for my customers at Madison Square Garden, Boston, Chicago, Buffalo, St. Paul, Los Angeles, etc., and I can do it for you. Before making your final decision where to purchase your eggs, send for my illustrated mating list, and be convinced.

"NOTE: Through an error in my Mating List, I have failed to credit the ownership of the 2nd and Undercolor Special Cockerel at Boston, as belonging to Mr. George D. Thompson, Jr., R. 1, Hope, R. I. I stated that this bird won 4th, which was a mistake. This being a bird of my strain, Mr. Thompson allowed me to refer to this winning in my Mating List, and I desire to give him full credit for the grand birds which he owns."



HENRY D. RILEY Box B Strafford, Chester Co., Pa.

him knows that "Quality" is his trademark and so is his catalogue; the one word "Quality" describes it all. The book is handsomely printed and contains many fine illustrations in black and white, and also a fine colored insert of a pair of Buff Orpingtons. As a text book on the breed it should be in the hands of every Buff Orpington breeder.

Monmouth Farms, of Freneau, N. J., have issued a fine catalogue on their White and Buff Leghorns. Other catalogues that have been received and are noted for their fine press work and il-

lustrations are as follows: Swastika Poultry Yards. O. E. Faxon, Prop., Plano, Ill.; Idlewood Poultry Farm, Swanville, Pa.; Mount Hill Poultry Farm, S. D. Hall, Prop., Seville, Ohio; Maplewood Poultry Yards, H. W. Hayner, Supt., Attica, N. Y.; F. A. Kaup, Glen Ellyn, Ill.; Brookdale Farm, Coatesville, Pa.; Mirimichi Poultry Farm, Foxboro, Mass.; F. S. Smith, Hamilton, Ohio; Sunswick Poultry Farm, Rufus Delafield, owner, South Plainfield, N. J.; The Rancocas Poultry Farm, Brown's Mills, N. J.; Harlo J. Fiske, West Springfield,

Mass.; Harry M. Covert, Terre Haute, Ind.; W. H. Everitt, Indianapolis, Ind.; Woolery Farm, Ralph Woolery, Bloomington, Ind.; A. B. Porter, La Salle, Ill.; F. E. Skinner, Sandwich, Ill.; Frank C. Cleveland, Morgan Park, Ill.; Charles H. Wood, Worcester, Mass.; J. W. Parks, Altoona, Pa.; Paul Wurtzel, Freeport, Ill.; F. A. Poertner, Berea, Ohio; Miss H. E. Hooker, South Hadley, Mass.; Luther J. Hall, Kenney, Ill.; United Breeders, Inc., South Braintree, Mass.; Dune Alpin Poultry Farm, East Hampton, N. Y.; Sheffield Farm, Glendale, Ohio.

BIRD NEPONSET PRODUCTS

There's a NEPONSET Roofing for Every Building

HERE'S one thing about roofings you ought to know—a "slowly made" roofing is the only kind that is slow to wear out.

Every foot of NEPONSET Roofing is made, not on the how fast but on the "*how-good-can-it-be-made*" principle. This takes time. But it's the only way to *surely* make a roofing absolutely reliable and 100% weather and waterproof. You buy roofing for an investment. But a half-made, "hurry-up" roofing is the worst kind of an investment. You pay almost as much. What do you get? A quick-spoiling roof—a roof that's only half a roof—a roof that is a constant nuisance and source of expense. NEPONSET Roofing is slowly made—to give a service of years—not merely to sell.

Sold by dealers everywhere. Write for name of nearest dealer.

Surely Send for Roof Book—FREE

NEPONSET PAROID ROOFING

Other Neponset Roofings are—Neponset Shingles for residences; Neponset Proslate, the colored roofing.

BIRD & SON (Established 1795), 547 Neponset St., East Walpole, Mass.

Current News of the Poultry World

by J. F. Shureman

If a bill to be introduced by Senator T. H. Hollister, of Freeport, at the next session of the Illinois State Legislature becomes a law the poultrymen of this state will receive substantial aid from the state funds. The bill, which is copied after a Wisconsin act, provides that the state appropriate $10,000 to aid the poultry associations over the state, each association which has held at least one exhibit to receive an amount equal to 80 per cent of the entry fees from the state, no donation to exceed $250 for any association in one year. Illinois poultrymen should urge their representatives in the State Legislature to vote for the bill.

During the past season there was shipped from Brenham, Tex., to the large markets of the North and East 18 cars of dressed turkeys, the aggregate value of which was $63,000. There were also shipped 38 cars of eggs, valued at $80,000. The turkey and egg industry is growing larger each year in Texas.

A St. Louis country branch of the Missouri State Poultry Association was organized at Clayton in March. Dr. L. D. La Gear, of Kirkwood, was elected president; Dr. T. T. Lucas, of Pattonville, vice president, and A. T. Tidwell, of Webster Grove, secretary. Later a vice president will be chosen from each of the five townships in the country. The object of the association is to promote the poultry industry in St. Louis county in every possible way and especially to co-operate with the state association and the experiment station at Mountain Grove. A St. Louis city branch of the state association has also been organized, with James J. Long, president; Henry Steinmesch, vice president, and Joe Blasse, secretary.

A gold nugget weighing 14 grains was found in the crop of a chicken recently killed on the farm of Mrs. Emerson Dean, near Savanna, Ill. The nugget, which is larger than a navy bean, was given the acid test by a Savanna jeweler and proved to be pure gold. Where the chicken secured the bit of precious metal is a mystery.

A sample of the pluck of the American poultry woman was shown when Mrs. Haynes Shoup, of Idaho, shipped a pen of White Wyandottes to the international egg-laying contest at Storrs, Conn. They traveled eight miles by muleback, twenty-eight by stage, and the rest of the way by rail, and, notwithstanding their long journey, made a splendid record, holding the highest pen average for over twenty-four weeks in succession.

Following are the new officers of the Northwestern Branch of the American Poultry Association, elected recently by mail ballot: President, S. F. Crabbe, Fargo, N. D.; vice president, Henry Hess, Winona, Minn.; secretary-treasurer, Maude I. Matthews, Larimore, N. D.; executive committee, Arthur C. Smith, St. Anthony Park, Minn.; C. E. Brown, Crookston, Minn.; Chas. O. Johnson, Minneapolis, Minn.; N. E. Chapman, St. Anthony Park, Minn.; E. S. Person, Minot, N. D.; D. J. Lane, St. Anthony Park, Minn., and Gustav Walters, of North Dakota.

The state of Ohio now has 9,506 fanciers raising pure-bred poultry, and her last egg census showed an egg crop of 88,183,810 dozens per year.

A Cleveland (Ohio) fence company reports selling 25,000,000 rods of wire fencing to poultrymen. This is just a slight hint of the magnitude of the poultry business.

"Rooster Day," June 6, is a new holiday proposed for the state by T. E. Quiesenberry, director of the Missouri State Poultry Experiment Station at Mountain Grove, in a resolution presented to Governor Major on March 3. On this day, farmers and poultrymen throughout the state will be urged to kill, sell or separate the roosters from their flocks.

In spite of the wonderful growth of the poultry industry in this country, egg

BARGAIN PRICES

Ferris Leghorns

Now is the time to buy. May chicks make fine winter layers. Prices greatly reduced and prompt shipment guaranteed.

Ferris Leghorns have been trapnested for heavy egg production for many years. Will lay 160 eggs a year with ordinary care.

Splendid exhibition quality also—their record of **35 First Prizes and 41 Second Prizes** in one season has never been equalled. Winners for years at such shows as St. Louis, Toledo, Pittsburgh, Chicago, Detroit, Louisville, Nashville, Topeka, Indianapolis, Terre Haute, Grand Rapids and the Iowa, Maryland, W. Michigan, W. Virginia, Kansas, Alabama, Georgia, Mississippi and Colorado State Fairs.

Eggs and Chicks that will give you the benefit of our thirteen years' effort to increase egg production and improve exhibition quality. Prompt shipment whether you want a setting or a thousand.

Eggs from heavy laying stock; May, $1.65 per setting, $8.00 per 100; June, $1.35 per setting, $6.00 per 100. From exhibition stock; May, $3.30 per setting, $16.00 per 100; June, $2.70 per setting, $12.00 per 100. Chicks from heavy laying stock, May, 25 for $6.00, 100 for $20.00; June, 25 for $5.00, 100 for $16.00. Safe arrival guaranteed. Prompt shipment—we hatch 5000 per week—ship them everywhere. See catalog for particulars.

Breeding and exhibition stock of finest quality shipped C. O. D. and on approval. Hundreds of cocks, hens, cockerels and pullets with laying qualities bred in the bone. Fine shape—low tails, backs that are long and concave, full breasts, good heads, pure white plumage, yellow shanks. Write and let us describe them fully and quote prices.

Sold under a liberal guarantee of satisfaction or your money back. All stock insured for 30 days—replaced free if anything happens to them.

Ferris Leghorns are being bred on many of the leading egg farms and your success will be assured if you breed this heavy winter laying strain.

Send for our new catalogue and see what hundreds of our customers say about laying and exhibition qualities. Gives the complete story of how we established and improved this strain so that they win wherever shown and out-lay any other breed or strain. Fully describes all grades of stock, eggs and chicks and will enable you to get started right at small cost. Just mail a postal today—the catalog is free.

George B. Ferris, THE FERRIS LEGHORN FARM, 905 Union Avenue, Grand Rapids, Mich.

importation are increasing. The Department of commerce in a statement just issued reports that imports of eggs in the month of December last amounted to 1,514,296 dozens, or more than in the entire fiscal year which ended with June, 1913. In the fiscal year 1903 the imports amounted to 368,000 dozens; in 1910, 818,000; in 1913, 1,367,000 dozens. In the first three months under the new tariff law, October, November and December, last, during which period eggs were admitted free of duty, the imports aggregated 1,701,153 dozens, most of them arriving in the month of December.

Ernest Groves, formerly with the J. W. Parks Poultry Farm, and for some time employed by Oscar S. Miles, the Ohio poultryman, has accepted the position of manager of the Adelphia Poultry Yards at Altoona, Pa., owned by Dr. T. A. C. Kephart, of Altoona.

Poultry and egg producers of Salt Lake county, Utah, to the number of 100, have formed an organization to be known as the Murray Egg & Poultry Co-operative Association, the purpose of which is to do away with the middlemen and sell direct to the consumer. An office and sales department will be established in Salt Lake City. Each member of the association will be required to stamp his eggs as a guarantee that they are fresh. Leroy Turpin, of West Jordan, is president of the association.

H. W. Rickey, of the Bureau of Animal Husbandry, United States Department of Agriculture, has been secured to co-operate with the Kentucky Agricultural Experiment Station in poultry work. He will work directly with farmers and farmer boys and girls in the developing of individual poultry interests, rather than with commercial poultrymen, and will give lectures and do poultry club work throughout the state.

The suit of the state of New Jersey against the Franco-American Poultry Company has been settled, the company paying the state $5,500 in full settlement. The poultry company was charged with shipping black and mallard ducks from their farm at Little Falls, N. J., to the farm at Goshen, N. Y. This is against the law and suits were instituted to recover penalties aggregating $80,000.

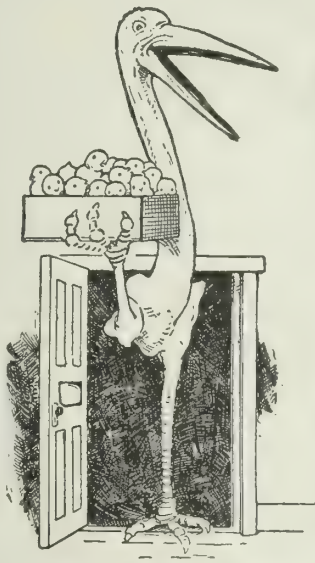
The old Idaho State Poultry Association has been discovered and a new association formed with a capital stock of $5,000, to be known as the Idaho Poultry and Pet Stock Association.

An enterprising American poultryman has had the nerve to establish a poultry farm on a large scale at Hanley's Hot Springs, Alaska. He has 2,000 White Leghorns and his houses are heated with hot water from the natural hot springs. Eggs bring a big price in Alaska and the venturesome poultryman is reaping a harvest.

A hen belonging to Edwin Smith, of Pawnee Rock, Kan., recently laid 31 eggs in 30 days, according to a trap-nest record.

A Rhode Island Red hen belonging to Mrs. Edward Pearson, of Plainfield, Ill., recently laid an egg measuring 12 inches in circumference the long way and eight inches the short way.

The poultrymen of Oklahoma has organized a state association and will hold a big show in Muskogee next winter.



The Western Michigan Poultry Association has been incorporated with a capital stock of $2,000, divided into 200 shares of $10 each.

Special courses in poultry raising are being established in the high schools of California.

California poultrymen are vigorously protesting against the importation of Chinese eggs, large quantities of which are being received on the Pacific coast since the removal of the duty. The city of Petaluma has sent City Attorney Gil P. Hall to Washington to protest against the entrance of Chinese eggs in this country as unfit for food, and Congressman Kent, of California, is in the fight with his sleeves rolled up, even though he is a free trader and voted to take the duty off eggs. The Department of Agriculture has already ruled that the importation of Chinese eggs cannot be prohibited as long as they are fresh.

Smith's White Leghorns

Three Firsts at Chicago! First Pen, First Pullet and First Hen—three firsts out of a possible five—at Chicago, January, 1914, defeating (among others) three of the most prominent breeders in the Central States, proves the quality of my strain. "The American School of Poultry Husbandry."

We have just received the prospectus of a new correspondence school, "The American School of Poultry Husbandry," of Mountain Grove, Mo. Prof. T. E. Quisenberry, director of the Missouri State Poultry Experiment Station, is president of this enterprise, and Ralph Searle is the secretary-treasurer. The sole business of this new school is to teach poultry husbandry by correspondence.

The prospectus states that "America's premier poultryman," Prof. T. E. Quisenberry, who is "America's foremost poultry authority" than whom "no other living poultryman has received such universal and unsolicited praise," will be assisted by "a staff of poultry specialists of national repute." The prospectus further states that "the course here offered gives you in twenty-four lessons all that you could get in a four years' college course—AND MORE."

The cost of the course, cash in advance, including diploma and a copy of the Standard, is to be $50. On the installment plan the entire course, with diploma and Standard, may be taken on payment of $10 at time of enrollment and $5 per month for ten months, or a total of $60.

Prof. Quisenberry, as director of the Missouri Station, has done some good work with poultry and chiefly in connection with the laying contests, which have attracted world-wide attention. If anyone can make a go of another correspondence course in poultry husbandry, he should be able to do it. We wish him all success. We understand that any student completing this course of twenty-four lessons must be "entirely satisfied" or his "money will be promptly and cheerfully refunded." The prospectus further states that: "You can complete the course in one year, or perhaps less, if you can spend half an hour daily studying. However, you are given FOUR years in which to complete the course, if necessary. When the last examination is satisfactorily passed a diploma is issued. This course, accompanied by practical work at home, will COMPLETELY equip you for a variety of positions in case you do not care to go into the business for yourself. You will be equipped for positions on large poultry plants, teaching, lecturing at farm institutes, poultry journalism and other branches of the business. The demand for trained workers in every branch of the industry is far greater than the supply."

Please note that all this is to be attained through "twenty-four profusely illustrated and carefully worded lessons," supplemented with personal letters and advice from Prof. Quisenberry. We haven't a doubt that one who subscribes to this correspondence school course will get all that he pays for and that Prof. Quisenberry will endeavor to give him his money's worth. But, we believe if we were a young man starting out to get practical knowledge of poultry husbandry, we would spend our money to get a job working for our board on some successful, practical poultry plant. Nevertheless, this school will doubtless get a great many recruits. We quote further from the prospectus:

"The modern poultry show is the heart and life blood of the pure bred poultry business. To 'win the blue' in hot competition is to turn the eyes of the poultry world in your direction—the harbinger of an increasing trade at lucrative prices. To win and win honestly is both a science and an art—a science and art which Prof. Quisenberry is a past master. In this lesson he lays bare the secrets of successful show men, gives you plain directions for getting your birds up to standard weight rapidly, for training, washing and fitting them, for shipping them safely in cold weather, for their care at the show, together with numerous other little 'tricks of the trade.'"

If the professor can make good with all that statement promises, we expect that he will have veteran fanciers of twenty to forty years' show-room experience flocking to his courses. It is a whole lot to teach in one lesson, or in the whole twenty-four. If you think we are in error about this, listen to the conversation of the veterans at the next A. P. A. convention.

U. R. FISHEL Box A Hope, Indiana

CONSULAR REPORT ON POULTRY BREEDING IN SILESIA.

THE animal census of December 2, 1912, showed 82,474,317 fowls in the German Empire (against 77,103,045 in 1907). Of these, 4,834,334 were in the province of Silesia. Most of the other Prussian provinces had more, Hanover leading with over six million.

The General Association of Silesian Poultry Breeders includes 67 societies with a total of 5,000 members. The organ of the societies in this province and in Posen is the East German Poultry and Rabbit Journal (Ostdeutsche Geflugel und Kaninchen Zeitung), published every Saturday at Reichenbach, Silesia; quarterly subscription price 75 pfennings (17.8 cents), or 50 pfennings (11.9 cents) for the poultry edition alone. The association co-operated with the Chamber of Agriculture in the establishment of 42 provincial stations for poultry breeding, of which 9 were supplied with Peking ducks, 7 with Emden geese, and 26 with chickens (9 with White Wyandottes, 12 with Plymouth Rocks, 3 with Yellow Orpingtons and 2 with White Orpingtons).

The poultry breeding stations now consider only White Wyandottes, Pekin ducks, and Silesian country geese, the production experiment stations only White Wyandottes. Eligible for premiums at shows are only Buff Italians, Black Minorcas, White Wyandottes, Barred Plymouth Rocks, Orpingtons, Pekin ducks, Rouen ducks, White Native geese, Emden and Pomeranian geese, Bronze and Snow turkeys, and also (at the desire of the minister of agriculture) various doves or pigeons. Practical American poultry breeding is still considered worthy of emulation by German breeders.

Various selling leagues formed in Silesia for the better marketing of eggs and poultry did not last long, only one, a fresh egg society (Trinkeier-Vereinigung Rubezahl), headed by Mrs. Preusse at Harischdorf im Riesengebirge, has met with some measure of success and has been assisted by the chamber.

A number of important farms use incubators, and it is believed that there is likely to be an increasing market for American incubators, if properly pushed, as they can compete in price. Incubators of 100 egg capacity cost $14.28, while a 300 egg machine sells for $38.08. Giant incubators for 1,200 hen eggs or 900 duck eggs are sold at 870 marks ($207.06), or for 990 marks ($235.62), with a warm brooder under the machine. Electric incubators are on the market, the best at the following prices (complete without stand or table):

130-150 eggs.....205 marks ($48.79)
200-250 eggs.....282 marks (67.12)

To place American supplies on the market a representative should be secured who has good connections with the large and small farmers. The name of a dealer in poultry and similar supplies, who believes there is an outlook for American articles and wishes to hear from producers as to prices and terms may be obtained from the Bureau of Foreign and Domestic Commerce. The list also embraces the addresses of poultry breeding associations and prize poultry judges in the district, in case it is desired to send catalogues direct. Descriptive matter wholly or partly in German will have much more effect, and it is always an advantage to quote prices (to German

POULTRY FARM S·C·W·LEGHORNS

(D. W. YOUNG STRAIN)

Greatest Known Layers

Day-Old Chicks Hatching Eggs And Breeding Stock

Bred from Range Grown Birds

It's Not How Many You Buy, It's How Many You Raise That Spells Success

Sunlight Poultry Farm's chicks are livable chicks, as well as quality chicks, because they are bred from quality birds that have vitality, stamina and the best laying qualities bred into them. They are the chicks that will develop into robust cockerels and pullets, that will please you. Not a yarded breeder on the farm, but just a large flock of breeders, out on unlimited range, housed in open front houses. Is it any wonder that I get such good fertility in my eggs and such strong, healthy chicks?

Read What One Party Says About My Stock and Plant:

Mr. E. N. Lemon, Lynchburg, O.

Dear Sir:—After returning home from a two weeks' tour of poultry farms in Southwestern Ohio and retracing my steps and looking over my notes, I have quite a few words of praise for your plant, of which you are no doubt justly proud.

I believe with your mammoth Candee Incubator (5400 egg capacity), and considering your plans and methods of handling eggs during incubation, you show that you are absolutely up-to-date and in a position to do a big "Day Old Chick" business.

Your plant looks good to me, being the best looking and the most convenient colony house system I saw anywhere on my trip.

Your stock, too, looked especially good, there being no droopy birds in evidence; this perhaps is due to the extreme cleanliness of your plant from start to finish.

Very truly yours,
Leslie J. Hoyt, Mt. Gilead, Ohio.

I Prepay Expressage

on all orders for day old chicks and eggs. Also guarantee safe delivery. Would suggest that you place your order at the earliest possible date to insure prompt delivery when wanted. If you want the best in S. C. White Leghorns, write to Sunlight Poultry Farm. They are persistent layers, hence money makers, the year around. Best of references. Send for catalogue and prices. "The Most of the Best for the Least."

CONSULAR REPORT ON RUSSIAN POULTRY RAISING.

DURING the year 1913 there were no serious losses from fowl diseases in Russia, such as caused grave losses during the previous year. Such fatalities as did happen occurred principally among birds, hens and turkeys, and were principally due to much cold rain during hatching periods. Water fowl were much less affected. Losses of appreciable amount were reported from the provinces of Podolia, Volhynia, Vilna and Minsk. Among geese and ducks broods were not particularly large. As a result, prices, especially in the provinces of Lithuania, ruled high. Geese brought from 62 cents in Kharkof to $1.55 in Lithuania and Poland. Hens ranged from 20 cents in Kharkof to 77 cents in the above places. Ducks were 25 cents in Kharkof and 77 cents in Poland. Turkeys brought 77 cents in the former place and as high as $2.06 in the latter. There was a great variance in the price of eggs in different parts. At Kief they sold at $9.27 per thousand, while in Poland the price averaged at $10.91. While the above were ordinary market prices, good quality, well fattened birds brought much higher prices. Progress in scientific poultry raising is to be found on the Volga and also in the provinces of Kief and Poltava. Efforts are being made to raise larger and better poultry and to effect this eggs from abroad are being imported. Producers are also endeavoring to form a combine with the object of supplying the consuming market direct and thus avoiding useless middlemen. This, however, may be found a difficult proposition in an industry like poultry growing.

John N. Grout,
Consul.

Odessa, Russia, January 24, 1914.

(Please note that producers in Russia would like to eliminate the middleman. It is the hoggish methods of the middleman, who wants all the profits at expense of both producer and consumer, that has brought him into disrepute.—Ed. A. P. J.)

BUFF ORPINGTONS **THE ELMWOOD STRAIN** WHITE ORPINGTONS

THE STRAIN OF LEAST RESISTANCE

Nineteen years a breeder, and I doubt that there is another breeder of these varieties that has more prize-winners in his breeding pens that I have. Every female is a listed breeder or a pullet of the highest quality, many of which is a prize-winner. Every male is a prize-winner sired by a prize-winner, bred from some of the most noted winners of the breed. Line-bred for generations, and my many years' experience in mating and selection places the Elmwood Strain bellwethers of the breed. **My Buffs** are an even, lustrous shade of buff, as soft as moonlight, full of vitality and vigor. **My Whites** are as near pure white, stay-white as it has been possible to get them so far. Strong, blocky and chock full of vim. The very best of winter layers. Every satisfied customer I get makes another boost for the Elmwood Strain, and I guarantee to satisfy or send you back your money. My many years' experience costs you nothing. You pay no more than I would be willing to pay. **Eggs** shipped safely any distance; **50 cts. each, $35.00 a hundred. Baby Chicks** of the same high quality, **$1.00 each.**

FOXHURST FARM : LIME ROCK, CONNECTICUT, U. S. A.

Black Spanish Male Changes Color.

Q. What would cause a W. F. Black Spanish male to change color at first molt? This bird was as black as could be as a cockerel, and now he is more than half white. Hackle is all white, In other parts the feathers are about half black and half white. He is in good health and always has been. He is now two years old. J. R. G.
Elwood, Ind.

A. We don't know the cause. Numerous cases have been reported where Black Spanish and Black Minorcas have turned white in course of several molts. The young chicks usually carry more or less white in plumage. All black birds now and then sport white. It has been charged to atavism, but no one has any positive knowledge as to the cause.

Wants Information on White Diarrhoea.

Q. Most of our best-known state investigators now agree that white diarrhoea is caused by bacterium pollorum, found in the ovaries of the hen. In other words, the germ is in the egg and not on the shell. Have you published your views on this subject? A. L. V.
Nutley, N. J.

A. In the book, "How to Raise Chicks" (obtainable of A. P. J. Chicago office at 75 cents the copy), an entire chapter of 17 pages is given to "Facts about White Diarrhoea."

We agree with Dr. Rettger and Prof. Stoneburn that in the disease reported by them as "bacillary white diarrhoea" that the b. pullorum found in the diseased ovaries of the mother hen is the specific causative agent. These investigators did not find and did not credit the presence of infectious germs on the outside of the eggshell.

It is evident from the experience of practical poultrymen in various parts of the country that all cases of so-called white diarrhoea are not the same as the bacillary white diarrhoea investigated at Connecticut station. There have been abundant cases of fatal diarrhoea in chicks, which were at the time named white diarrhoea and had similar symptoms to infection with b. pullorum, where other investigators found micro-organisms other than b. pullorum, which were believed to be the causative agents. By reading the book above mentioned this point should be made clear.

In numerous instances the source of infection was found to be on the outside of the eggshell, and disinfection of eggs prior to incubation put an end to the epidemic of fatal diarrhoea of baby chicks on a large number of practical plants. Obviously such cases could not have been caused by b. pullorum, which is found in the egg, according to Rettger, and not on the shell. With the multitude of infectious diseases causing fatal diarrhoeas of the young, it is not to be expected that all are caused by the same specific germ. There are undoubtedly a number of micro-organisms

Eggs and Baby Chicks from profitable layers is your only guarantee for SUCCESS in the poultry business. Isn't it a serious matter when eggs are selling for 35c to 50c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from. I breed for eggs and can furnish you stock that will lay when eggs are high. THAT MEANS YOUR SUCCESS.

PRICES	Eggs	Baby Chicks
From stock with records of better than 200 eggs and their special matings .	30c each	50c each
Form stock with records of 144 to 199 eggs and their special matings . . .	20c each	35c each
From stock without records but from trapnested blood lines	10c each	20c each

Note:—There are no discounts on eggs or baby chicks in lots of less than 200. Can make prompt delivery of eggs and baby chicks. Write for sales list. My instructive catalog is free.

JOHN G. POORMAN, Box 100, TINLEY PARK, ILL., U. S. A.

which cause fatal diarrhoea in chicks, and many of these have been brought under the popular name of white diarrhoea.

Whatever the source of the disease, chicks reared in "white diarrhoea" flocks should not be bred. Breeding stock may be both a direct and indirect source of infection. Where white diarrhoea appears, it is a good plan to dispose of the breeding stock from which the eggs hatching infected chicks were obtained. Disinfect the premises thoroughly and make a fresh start with known-to-be-healthy, vigorous stock.

When bacillary white diarrhoea makes its appearance, you will always find in the flock producing the hatching eggs hens with diseased ovaries. The yolks in the egg cluster may look as if partly coagulated or withered and finger marked. Such hens will produce infected eggs that will hatch white diarrhoea chicks. Not all of the eggs laid by hens with infected ovaries produce infected chicks, but a large percentage do. The safest plan is to get rid of such birds and start with fresh stock known to be healthy.

In diarrhoea of young chicks caused by infection during incubation or immediately after hatching, from germs on the eggshells, simple disinfection of the eggs for hatching has proved effective in a great many cases in the United States and tropical countries. In such cases the eggs were dipped, just prior to being put into the incubator, into a solution of one gill of creolin in eight and one-half quarters of soft water. This method of disinfecting hatching eggs put an end to epidemics of so-called white diarrhoea on a great number of poultry plants. It is apparent that in these cases the germ causing the disease must have been on the outside of the egg, or the disinfectant would not have proved effective. Therefore, such cases were probably some other diarrhoeal disease and were not caused by b. pullorum, which is found inside the eggs.

In any case, if one breeds only from sound, healthy, vigorous breeding stock and makes it a point to know that the stock is free from infection, he will not have to worry about "white diarrhoea," whether from within or on the eggs.

Cockerel Draws Head Back and Shakes It.

Q. I have a cockerel that draws his head back a little and shakes it from one side to the other a good deal. Otherwise he seems well. What is the cause and how can I cure him? F. C. K.

La Porte, Ind.

A. You can't cure him. Sometimes trouble is due to nervous disorder and sometimes because of large and heavy comb and wattles and sometimes is due to organic disease. We have noted many cases but have never seen one that was permanently cured. Unless the head shaking interferes with his usefulness would forget it. If it affects

him seriously, get rid of the bird by way of the family table.

Hatching Eggs in Higher Altitudes.

Editor American Poultry Journal: In January issue I noted the article, "Hatching Eggs in Higher Altitudes," and there is a good deal of truth in what the author says. I have lived in this valley twenty years now, altitude is 6,700 feet. Have hen-hatched all my chicks, 400 last season, and I do not see but what my hatches here are about the same as I had in Ohio. Frequently a hen comes off with a full brood. I have quit sprinkling or wetting the eggs. I just let the hen alone. Thus you see my experience is different from that of your correspondent. It is in my mind that there is something beyond moisture to look for. Perhaps the hen exudes some kind of animal gas, some you might say like carbon dioxide. Some of your readers might enlighten us.

Capitan, N. Mex. A. C. Austin.

Note.—We have received many letters regarding Mr. Mathews' article on "Hatching Eggs in the Higher Altitudes," some complimentary and praising the article as a great help to poultrymen hatching in high altitudes and others condemning it and ridiculing the author's statements. It is apparent that there is a very wide difference of opinion concerning hatching in high altitudes. It is probable that conditions in high altitudes vary greatly according to the particular location and the air drainage. Mr. Mathews impressed us as a man who had experimented carefully and knows what he is talking about. We will be glad to have reports of experience in both artificial and natural incubation in high altitudes. (Ed. A. P. J.)

"Wingold" Buff Orpington cockerel. First at International Show, Buffalo, N. Y., 1914. (Just as camera saw him.) Bred and owned by F. A. Poertner, Berea, O.

Hamburgs.

Q. Please tell me through A. P. J. if the American type of Hamburgs, all varieties, are like the English Hamburgs. Why is it that there are not as many people keeping Hamburgs as keep the heavier breeds? I like Hamburgs, independent of their not being heavy table poultry, and I like to hear about them. I have made a lot of inquiries in this city but can't find any poultry keepers here who know the breed; about all they seem to know are Rocks and Reds. Is this because

From 10 of the finest matings ever bred, that will produce next season's winners for you. Bred on true Wyandotte lines that can lay eggs and win prizes. Send for mating list.

J. W. Andrews, Box A, Dighton, Mass.

of the severe frosty weather we have here sometimes or are they prejudiced against the Hamburgs because they lay small eggs and are small birds?

Denver, Colo. L. H.

A. English bred Hamburgs are a coarser type and not as trim, neat and sprightly as the American type. They are fairly hardy and should do well in your climate. Hamburgs are excellent layers of white eggs. Popularity is something that is not easy to explain. Utility value is not always the key to public favor, though in the long run practical qualities sustain popularity. There are a large number of Hamburg breeders in America and some of the finest specimens bred in the several varieties of this breed are to be found in our shows. That the breed does not lack popularity is evidenced by the fact that our big shows always have large classes of Hamburgs of remarkably fine quality. If you like Hamburgs, and are not particular about a heavy variety and big eggs, breed them by all means. Anyone with true fancier instinct can get a lot of satisfaction out of Hamburgs and for a small variety

"Wingold" Buff Orpington cockerel. Second at Buffalo, N. Y., International Show, 1914. Bred and owned by F. A. Poertner, Berea, O.

their practical qualities are worth attention. The breed is one of the oldest among pure bred poultry.

Food Analyses—Score Cards.

Q. (1) Please give me the chemical analyses of the following foods: mangels, sugar beets, alfalfa meal, white clover hay, sweet corn, beef scraps, beef meal, and bone meal.

A. (1)

A-1 Foodstuff	Water	Ash	Pro tein	Fibre	Nitrogen free ex- tract	Fats
Sweet corn.....	8.8	1.9	11.6	2.8	66.8	8.1
Mangels	90.9	1.1	1.4	0.9	5.5	0.2
Sugar beets.....	86.5	0.9	1.8	0.9	9.8	0.1
Alfalfa meal....	8.4	7.4	14.3	25.0	42.7	2.2
White clover hay	9.7	8.3	15.7	24.1	39.3	2.9
*Beef scraps and beef meal	10.7	4.1	71.2	....	0.3	13.7

Bone meal is of use chiefly for its contained mineral elements, mostly lime.

*Commercial beef scraps and meat meals are about the same, except that the scrap is coarse ground and the meal is ground fine. Different brands vary widely in protein content, some running as low as 50 per cent.

Q. (2) In the catalog of a well-known breeder I find these statements: that breeders should make a bonfire of score cards, so they will not be tempted to place an inferior bird of high score in the breeding pen just on

account of the score. As long as a breeder uses the score card as his guide in mating his pens he will remain a back number. He also says that in many cases the score card keeps the best birds from winning.

What I would like to know is how can a high scoring bird be inferior? How can the score card keep the best bird from winning and how can it put a bird in the breeding pen that should not be there? J. F. L.

Hart, Mich.

A. (2) Those opposed to score cards are just as rabid in their opinions as those in favor of them. There will always be room for controversy here. The fault is both in the system and in the application of it. Scoring by card develops into a system of making cuts in certain sections and deducting these from a possible perfect score. Such a plan may easily be unfair to the specimen. Various forms of score cards have been devised and the Standard has scales of points for the various classes and all are subject to criticism as of doubtful fairness to the specimen and calling for exceptionally good

judgment and a comprehensive knowledge of the standard on the part of the judge. A man who mates his flocks by score card might easily come to grief, as the most important factor in mating is knowledge of what is back of the bird, how it is bred and how the blood lines in the mating may be expected to nick. A bird capable of winning honors in the show room as a Standard exhibition specimen may easily be inferior as a breeding specimen. In fact exceptionally good show specimens seldom prove up well in the breeding pen.

How to Tell Fertile from Infertile Eggs by Examination of Unincubated Yolk.

Q. We bought a trio of S. L. Wyandottes from a breeder in Minnesota. We have seldom seen the cock serve the hens, but thought he would soon become more attentive as he is a fine looking bird.

One hen started laying and we set nine of the eggs. After seven days we tested the eggs and found them as clear as a fresh egg. Upon breaking the eggs we found spots at sides of yolk such as we supposed were found in fertile eggs. We also opened an egg from a pen where there is no cock bird and found the same spots. Will

Close-To-Nature OPEN AIR Hovers

THE LONGEST PORTABLE HOVERS NOW ADVERTISED

Five feet long, warmed evenly by heater on inductive principle. Applies the three **Close-To-Nature** principles:

CONTACT WARMTH, like the hen.
OPEN AIR VENTILATION, not hot air.
NON-PILING OR OVERCROWDING.

Combines the **Fireless** with the **Lamp**—use the lamp for very young chicks and discard it as they grow older; or use lamp during daytime but extinguish it when chicks cluster for the night. Hinged for easy cleaning out and airing. Roosting bed of earth or litter, perfectly sanitary. Nothing like these hovers now on the market. Brooders on same principles as hovers. Don't get a brooder or hover till you have read the Close-To-Nature circular. Very low prices.

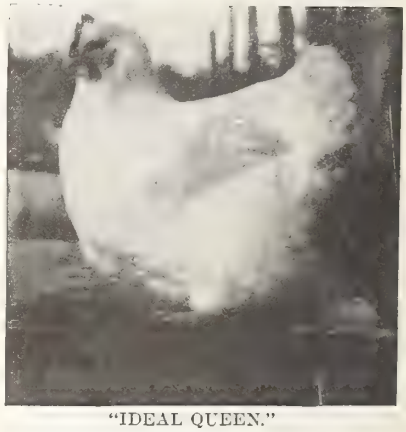
RINGLET STRAIN

1st Cockerel, Shape and Color Specials, Champion
Springfield State Show, 1914

Our pens are rich in the blood of this grand bird. We have the very best values in eggs for hatching at following prices: From fine large birds of our best blood lines—$2 per 15, or $5 per 50 eggs; from pen headed by 1st ckl. at Bloomington, Ill., score 92¼ by Hyle, $2.50 per 15 straight. Will sell eggs from my 1st Springfield ckl. and his sire's pens after April 1st at $5 per 15 eggs.

Fred P. Erdman - Highland Poultry Farm - Normal, Ill.



you kindly tell us what a fertile egg looks like and what an infertile egg looks like when you break the shell.

Los Angeles, Cal. G. L.

A. The "spots" you noted at the sides of the yolk have nothing to do with the fertility of the eggs. They are simply spiral arrangements of heavy albumen known as the chalazae, and serve as ligaments to support and protect the yolk.

A fertile egg after seven days incubation is easily recognized without need of breaking the shell if held before an egg tester. At this time the embryo chick can readily be seen through the shell as a pulsating dark body surrounded by abundant red blood vessels. The infertile egg remains clear like a fresh egg. At this time dead germs generally show up as still dark spots or as blood rings, or blood streaks. You will find egg testing fully explained and illustrated in the book "How to Raise Chicks," obtainable from our book department at 75 cents a copy.

By breaking fresh unincubated eggs and examining the yolk you can determine whether or not the eggs are fertile. As the egg is broken into a saucer the yolk falls with the side bearing the "germinal disc" uppermost;

"IDEAL QUEEN."

An unretouched reproduction of a grand White Orpington hen that was in First Prize Pen at January, 1914, Chicago show. Bred, owned and in the breeding pen of Charles W. Green, Proprietor Ideal Orpington Farm, Box, 168, Lombard, Ill.

or if you remove a portion of one side of the egg shell and examine the yolk as it rests in the egg you will always find this germinal disc in the top side of the yolk. The germinal disc is easily recognized as a small light colored disc about one-sixth of an inch in diameter. It is from the cells in this germinal portion of the egg that the chick is formed; the balance of the yolk is food for the embryo.

In a fertile egg a typical germinal disc will show an outer white rim of some little breadth and within this is a circular transparent area; inside of this clear area is an opaque or white spot of variable appearance, which may be the same throughout or may appear dotted.

In the germinal disc of an unfertilized egg there is no distinct division into an opaque rim and transparent center and the white disc is simply marked into a number of irregular clear spaces.

Off Colored Feathers in Orpingtons.

Q. Last spring I purchased a ten dollar sitting of White Orpington eggs from a big advertiser. I got six chicks

from this sitting and was satisfied with them because I did not know any better. When they were seven months old I entered one of the cockerels in a show. Two Orpington breeders who exhibited at this show said I ought not to have had such birds from ten dollar eggs. The cockerels have very poor shapes and have brown and black feathers in them. E. M. B.

Buffalo, N. Y.

A. Such chicks might come from pure blooded stock, but we would only expect them from carelessly or poorly mated breeding pens. Ten dollar eggs should have yielded you better results and we believe that the breeder should adjust this matter to your satisfaction. Better write him full particulars and ask for an adjustment.

Intestinal Irritation.

Q. On going out in the morning to feed my chickens I found one on the ground with leg stretched out straight. I took it out of the coop and put it in a dry shop room until it got better and in a day or two it was running around all right and showed no sickness, red comb, bright eyes, good appetite, but its tail drooped. I keep getting a bird affected this way every little while. I have six Philo coops, 3x6 feet, and I clean them out once a week. I feed

"Cockerel," Imported Deceiver: weight, 12 lbs., who heads Jaquesin Farms' third breeding pen. Second at club show, 27 cockerels competing; cockerel who was special for best cockerel in show at Hagerstown being unplaced.

wheat and oats in morning and corn at night. They have sprouted oats at noon and a few times I noticed that these seemed a bit mouldy. Do you suppose that the mouldy sprouts caused the trouble? A. S.

Janesville, Wis.

A. Trouble was intestinal irritation. May have been caused by the mouldy grain sprouts or by poisoning from soil of the pens. Better move the coops to new clean ground as often as you can and sweeten the old ground by deep spading, working and cropping it with some rank growing stuff like corn.

Feather Eating.

Editor American Poultry Journal: I note that one of your subscribers wants a cure for feather eating. I have one that never failed me. For fifteen years I raised fighting game cocks and nearly every breeding pen would have one or more feather pullers. It seems to me that Games are more inquisitive than other breeds and are always looking for something, either for a fight or feather pulling. I tried many different remedies until I thought of a plan to keep the bird's bill apart so it could not pull a feather and yet would not be inconvenienced in eating.

Get a piece of aluminum wire about the size of common wrapping thread, pass it through the comb close to the base of bill so that it won't tear out; about half way back on the bill place it around the upper half and bring ends together, make a neat twist to fasten it, cut off with a pair of shears and bend the twist back against the comb. Take your finger and press the wire up against the roof of the mouth and that bird is done with feather eating. Hope this helps some one. Walter D. White

Hooker, Ohio.

(Note.—Mr. White's plan is a good one and will stop feather pulling. Some poultry supply houses sell "poultry bits," which are quickly applied and serve the same purpose. Ed. A. P. J.)

Ground Limestone.

Q. I have read an article from Rhode Island Experiment Station stating that ground limestone is good for young chicks, especially for leg weakness. They do not give a definite way of feeding it. I would like to know in what proportion or weight to feed it. My chicks are dry fed from a hopper. J. W.

Chicago, Ill.

A. Simply crush the limestone to size of fine grit or chick food size and keep it always before the chicks. If desired you can add five per cent fine ground limestone to your dry mash.

"Colonel Jack." Bred and raised by E. C. Cleveland, Imlay City, Mich.

Contamination.

Q. Suppose you had a Columbian Wyandotte cockerel in a pen with several Columbian Wyandotte pullets and put in this pen two Ancona pullets or two mongrel pullets. Would the chicks hatched from the eggs of the Columbian Wyandotte pullets be clear Columbian Wyandotte? Would there not be a trace of the Ancona or mongrel in the chicks obtained from the Columbian Wyandottes? I maintain that there will be a mixture. I know of an instance in the breeding of games where a person followed very careful line breeding with one exception, and that was when he left a person in charge of his fowls during prolonged absence, who allowed a cock bird to tread a mongrel hen and the offspring from the balance of the pen showed traces of the mongrel. Would be pleased to hear from you in this matter. O. P. S.

Battle Creek, Mich.

A. We have repeatedly been told stories of contamination of this sort but have never seen a case that could be proved. If that person in

charge of the flock permitted the cock to tread a mongrel hen, he might easily also have permitted a mongrel or other male to run with the females. We have repeatedly allowed well-bred males to run with other varieties and afterward used them for breeding with no change in results from their mating. We don't believe that the male treading foreign birds will contaminate the balance of his mates. Don't see how it possibly could.

Most of the yarns about contamination which we have investigated will not prove up when you get all the facts. We were once told of a snow white hen that laid eggs producing mottled and coal black chicks simply because she frequently saw a black male through a chicken-tight fence. Believe us, either she got through that fence or the male did, or some other male with black in him did, or there would have been no black chicks. In other words the contamination came in some other form than through eyesight and mental impression.

You can keep white egg females indefinitely in a pen of brown egg thoroughbreds and have the brown eggs hatch chicks true to their breed. We have seen it done repeatedly and never once noted any contamination.

Off-color in chicks of unrelated birds of same variety may result from atavism, but you don't get real contamination unless you mix the seed. In example cited by Mr. S. the Columbian Wyandottes would come pure. The eggs from mongrels and the Anconas would produce mongrels containing part Columbian blood.

Maywood Grammar School Poultry Show.

Editor American Poultry Journal.

Gentlemen: As there is considerable talk about boy's and girl's corn and poultry clubs throughout the country, perhaps your readers may be interested to know that the pupils of the Lincoln Grammar School of Maywood, Ill., held a poultry show Friday, March 6th. There were on exhibition fifty-five fowls, four pigeons, fourteen bantams, two pheasants and two guinea fowls.

In addition to these entries by the pupils, some of the older breeders of Maywood who have captured prizes at such shows as Elgin and Chicago exhibited (not for competition) in order that the boys and girls might compare their stock with that of prize winners at the large shows. Among these were the first White Orpington cockerel, Chicago, 1914; four birds from a display of prize winning Black Minorcas, Chicago, 1913; and the first prize White Leghorn cockerel, Elgin, 1914, which was bred and owned by Mr. Bicknase, the principal of the Lincoln Grammar School and to whom belongs a great deal of credit for awakening an interest in poultry among the children of this school.

The show was judged by comparison, no classes being made for any variety, but in judging the six best "coops," that is the six best entries in the show, were each awarded a first prize. The next six in order being awarded the second prizes. To each winner of a first prize an additional prize of a sitting of eggs was given, these eggs being donated by the fanciers who exhibited birds not for competition. Those securing second prizes received also a half sitting of eggs, the winners to choose

PERKINS' STRAIN

Partridge Plymouth Rocks

are perfect both in type and color. As egg producers they can not be excelled.

That is why eggs from my matings are bound to produce fowls that will meet all requirements.

Look up the show records and you will find that the "Perkins Strain" have always been among the winners.

If you want "birds of quality," that kind that have the beautiful triple lacing, besides being egg producers, send for a setting of Perkins Strain eggs.

Mating List with color plate of fowls, describing our pens, is free. Write for it.

SPECIAL.

At a great cost, we have issued a special De Luxe catalogue, beautifully illustrated, with full information about Partridge Rocks. The price is 25c and it is well worth the money.

the variety they wanted and the association to purchase same.

This was the first attempt at holding a poultry exhibit in Maywood. The idea is to stimulate interest in poultry culture among the boys and girls of Maywood and to encourage back lot poultry raising of the right kind.

Next December the second show will be held, and as the first show was a financial success, because of the small expense and the majority of the prizes being donated, the proceeds of the show will go towards cash specials and other prizes for next winter. The principal of the school expressed the hope that the winners of eggs this season would come back at the next show and win with the chicks hatched from them, and that those who did not win this year would come back with improved stock and so stand a better chance of beating the other fellows. R. C. Jamieson.

More About Egg Production Cost.

Editor American Poultry Journal

Have been much interested in communications in regard to egg prices in recent issues of your Journal, especially one by Levi French in March issue. Mr. French gives actual figures and not guesswork averages.

On the question of egg prices, conditions vary greatly but that the price of first quality table eggs is, and always has been, too low, no one who knows the facts in the case can dispute. Undoubtedly there are eggs in the market for which any price would be too high, but for good eggs we must have good prices.

It is very seldom we find a poultry keeper who knows what his eggs cost him. If he comes out ahead of the game he is well pleased, if he does not, "there's no money in poultry." But other lines of business can not be successfully carried on in this slipshod fashion. Keeping poultry records is, many times, difficult if the poultryman is otherwise employed a good part of his time, but it is the only way to know where he stands.

My records for the past year are complete for only half of the year as on account of an accident, I was unable to care for my birds, and my substitute attended to that part of the business when he remembered, which was about half the time. These few figures for the first six months of the year are of interest, however, since they show on what a small margin the poultryman is conducting his business.

The record is as follows:

Month	Local price per doz.	Average cost per doz.	Average cost feed per hen
January	.22	.349	.0823
February	.20	.27+	.087
March	.15	.122	.085
April	.16	.12—	.095
May	.17	.097	.095
June	.14	.124	.0834

Foods used were as follows:

Bran at $1.25; middlings, $1.40; beef scrap, $3; corn, 46 cents per bushel; oats, 30 cents per bushel; wheat, 95 cents per bushel; ensilage, $4 per ton; potatoes, 25 cents per bushel.

These birds are Barred Plymouth Rocks and have been fed the Purdue laying ration with ensilage and potatoes as green food. They have free range, and up to date methods are used in their care and management. The price of foodstuffs are figured from local market prices, actual cost being given. No allowance is made for labor. Interest on investment is almost one cent per

month per hen, and is not included in the figures.

Anyone can plainly see that these birds on free range with plenty of good food and care, while averaging a good deal better than Uncle Sam's "average hen" that we hear so much about, barely paid the cost of the food they consumed, to say nothing of the labor and cost of investment. Looks like bad business, doesn't it? And wouldn't it be interesting to know how many thousands of poultry keepers are doing about the same or worse? But most of them don't know it and are taking all kinds of comfort fooling themselves. The small town is a poor market wherever it may be, but in the parcel post days that are coming either the small town residents will have to pay good prices for their eggs, or the producer will find customers who will. S. J. Hiss.

Plymouth, Ind.

Chicago and the Next A. P. A. Meeting.

Chicago, through its A. P. A. members, the Chicago Poultry Society wants your vote for the next annual convention of the American Poultry Association.

The Chicago Poultry Society is made up of poultrymen around Chicago for

Leon C. Huntington's first prize cock bird, Chicago, January 1914. A most interesting feature of Peerless Strain White Leghorns is that they are excellent layers as well as winners. Mr. Huntington says one of his customers reported having received two eggs from a trapnested Peerless exhibition hen February 26 this year. The twelve hens in exhibition mating number 6 have an average of 184 eggs in their pullet year. And Mr. Huntington writes that eighty hens (1911-1912 hatches) in his pens 11-20 have averaged sixty-one eggs per day during the first two weeks in March.

the purpose of holding monthly meetings, where they can get together socially, talk chicken, and do what they can to promote this great industry. This society does not promote any show and is formed solely for the above stated reasons.

We feel that Chicago is entitled to this meeting because of the chance of doing the greatest good for the largest number. Being centrally located, the attendance is bound to be larger than if held at any other point. It is a foregone conclusion that the 1915 meeting will go west and that some mid-west city is entitled to the convention this year. Many important matters are to come up and a large attendance is desired. All railroads lead to Chicago and many breeders west and northwest of Chicago would come here when they

Port Richmond, N. Y.

could not afford or would not go to any other point farther east or south.

Realizing that many members bring their families who are not, perhaps, personally interested in the regular work of the convention, and also realizing that all work and no play makes such meetings dull, the following tentative program of entertainment, same to be enlarged, improved, or changed to meet the desires of the convention committee of the A. P. A. is offered.

A convention hall large enough to seat 1,000 people, another hall large enough to comfortably seat the executive board, an executive room for the president, another for the secretary, will be furnished the association free of charge. Hotel accommodations are plentiful, and it is guaranteed that rates will not be raised, as is often the case. Good rooms can be had for $1 a day and up. Those attending will be greeted with a reception and ball on the opening night of the convention. A banquet will be given one night of the week. The ladies will be entertained at luncheon one noon, by the great Marshall Field & Co., and they will then be shown through this great establishment. The ladies, and perhaps others, will be given an automobile ride of 40 miles through the park and boulevard system of the city. An evening boat ride will be given on the lake with the large steamer "Teddy Roosevelt." The men will be treated to a smoker. There will be badges furnished free that will admit to several of the amusement parks, and to whichever league baseball team is playing in the parks at that time. The Chicago Poultry Society will have entertainment to offer galore, and it is only a matter of how much you wish. Behind the Chicago Poultry Society are the best business men of Chicago. You can have all speeches by the mayor, the chief of police or any other notable you wish. The nights in Chicago are always cool and there is never a night when one cannot sleep comfortably under covers. Then vote for Chicago, come 1,000 or more strong and you will have the best time you ever had at an A. P. A. convention.

—o—

Mr. A. C. Hawkins.

It is with pleasure that we note the name of Mr. A. C. Hawkins, Lancaster, Mass., on the nomination ballot of the American Poultry Association. We know of no one who is better qualified to act as a member of the executive board than Mr. Hawkins. His many years of successful breeding and exhibiting thoroughbred poultry has well fitted him for a position of this kind, and we feel that he is entitled to the unanimous support of the members of the American Poultry Association in every section of the country.

JOE-PYE Orpingtons

"CHAMPION NEW YORKER"
Greatest Buff Orpington Sire and Show Bird in the World

Madison Sq. Garden
1913-14

1st and 4th Cock
4th Cockerel
4th Pen

In the last five years my male line has won 1st at the "Garden" four times. One of these five years I did not show, but two cockerels from eggs I sold, that year won 2nd and 3rd, beaten by an importation. This is an unprecedented record.

To this add my great win on males at the Palace, N. Y., at Boston and many smaller shows for the past three years and the fact is well established, beyond dispute that I have the strongest male line in the country. And it is a "line" I have bred—all related—not transient "sports" that happened to win but different birds of this line that have been awarded highest honors by many judges.

With this large winning at the largest shows, on males I bred, I am able this year to put together a most remarkable and consistent lot of matings. My free mating list describes pens in detail.

Guarantee on Eggs

I make the generous offer to replace all infertile eggs once free of charge.

Again the blackbirds sing; the Streams
Wake, laughing, from their winter dreams,
And tremble in the April Showers
The tassels of the maple flowers.

* * *

April hatched chicks make early fall layers.

* * *

Fertility is excellent, according to results noted and reports received.

* * *

The man who succeeds in life is the one who "is doing" something every day.

* * *

Feed but little at a time, but feed often and plenty. Keep the hens busy. More eggs and best fertility will result.

* * *

The little things count big in poultry raising. Aim high, work carefully and intelligently, observe and try. Your success will be an item of complete satisfaction to you.

* * *

Men should never run after a street car or a woman, there will be another one along in a minute.

* * *

Chicago for the 1914 A. P. A. meeting. Its miles of lake beach will be a reminder of what our members enjoyed at Atlantic City last summer, and its selection will insure a record meeting.

* * *

Our idea of an earthly angel is a satisfactory wife.

* * *

We think it a good idea for judges to report the prominent classes at the great shows. They handle the birds and should know. The breeders are willing to learn and such reports would be of value to many.

* * *

Mr. E. B. Thompson has no opposition and will be re-elected President of the American Poultry Association. Secretary Campbell is likewise fortunate and deserving; his work for years has been above question and a credit to the A. P. A.

* * *

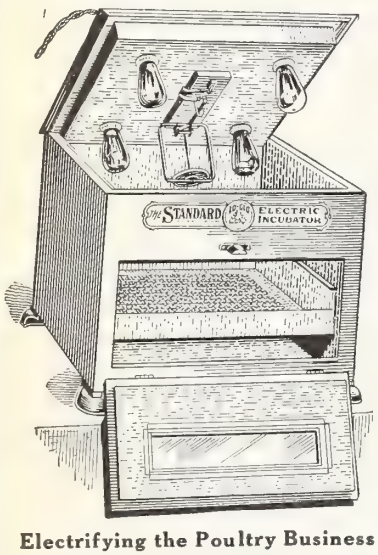
This is the season of catalogues and we try to mention all received. Yearly they show improvement, a good sign of progress among the breeders.

* * *

Names on the coops before judging is the proper caper and we understand several associations will adopt this plan next season. The judge will pay no more attention to that than he does to leg-bands, and why should he? He is there to judge the birds. If he fails, this is the way to find him. Let us put our Poultry Exhibitions, Poultry Associations and Poultry Judges on a par with other great exhibits held in this country. We can do it by confidence in ourselves.

* * *

Have you read the March A. P. J. from cover to cover. If not, why not? There is only one larger book published, and that don't treat on poultry.



* * *

The new A. P. A. Constitution is

greatest breeders and well deserves the office.

* * *

We are often asked to give feed formulas for chicks, laying hens, ducks, etc. We have referred to these often, but cannot repeat copy every month. Much depends on proper feeding and growing and we would advise the breeders to buy a standard book on this subject.

* * *

The catalogue of W. R. Curtiss & Co., Ransomville, N. Y., is a regular textbook on feeding. They raise hundreds of thousands of chicks and ducks yearly and have made a particular study of this question. If you are interested in their varieties, write them for copy. They breed mammoth Pekin Ducks and White Runner Ducks, White Rocks, White Wyandottes, Leghorns and Reds, and make a specialty of baby chicks.

* * *

The Dune Alpin Farms, East Hampton, N. Y., specialists of S. C. White Leghorns, are mailing out their mating list. Their late winnings at the New York Palace Show, Hagerstown, etc., where phenomenal records were made, is late history of particular worth. They won their honors in great classes at great shows and the line has proven its quality for years. Mr. Kerr, the manager, has every reason to crow over his line and their records.

* * *

Some breeders need to prune their ads before the A. P. A. gets to them. It is foolish to make broad and unlimited statements that are "not" borne out by facts. Such advertisements will get them nothing.

* * *

One advertiser complains that two breeders and one judge (?) did not congratulate him at a certain show. How careless Old Josh Whitcomb said, "Once a man and twice a child." How true!

* * *

The Barred Plymouth Rock Club, Mr. H. D. Riley, Strafford, Pa., secretary, is preparing for the new club catalogue. The breeders want to enroll now to get into this. The club is in the best of condition and is doing splendid work all along the line.

* * *

The Williamsport Show will be held November 17-20, 1914. It is the First Great Show. Don't miss it. Mr. Jas. T. Huston is president and Mr. Geo. Hanks secretary.

Plow the Yard

Every real poultryman knows how easy it is for the yard to get hard and sour. Don't you think it would do your chicks good if you would turn the soil over frequently? This

IRON AGE Wheel Plow

will do it easily. Costs $2.50 only. Can work in your garden with it, too. Plows in most soils, opens and covers furrows and ridges growing crops and you can use on it cultivating teeth, scuffle hoes, etc. Other Garden Drills and Wheel Hoes up to $12.00. Ask your dealer about them and write us for booklet, "Gardening with Modern Tools" and copy of Iron Age Farm and Garden News.

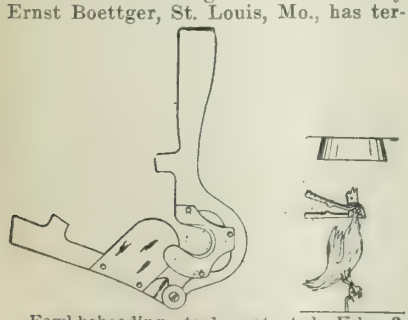
Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

THE Department of Agriculture, in a recent bulletin on "The Commercial Fattening of Poultry," states that: "The use of labor-saving mechanical devices has enabled one man to care for 4,000 to 5,000 birds." It states that a mixing machine is particularly a good investment when one is fattening a large number of chickens. Portable feeding batteries, spraying machines, and racks for hanging dressed poultry are among the devices the Agricultural Department's experiments stations have used to advantage.



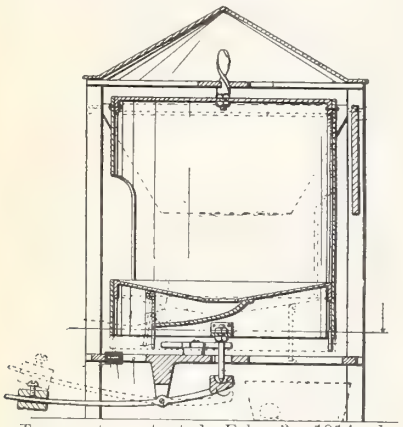
Among recent devices patented by individual poultrymen the country over there are a number of especial interest. A poultry perch invented by Bick R. Bonney, Kansas City, Mo., has a trough or reservoir member connected with it for the storage of lice killer, exterminating fumes from which are

Vermin killing roost, patented February 10, 1914, by Bick R. Bonney, Kansas City, Mo. No. 1,087,079.

communicated to the fowls while they are at roost. The wooden tread member has slots extending through it to the reservoir containing the liquid lice killer. Vermin on the fowls and around the roosts are exterminated by the use of this device. The reservoir may be removed by simply turning ring bolts which extend through slots at its ends, when it needs to be filled or cleaned. Patent 1,087,079.

A fowl-beheading tool devised by Ernst Boettger, St. Louis, Mo., has ter-

Fowl-beheading tool, patented Feb. 3, 1914, by Ernst Boettger, St. Louis, Mo. No. 1,085,793.

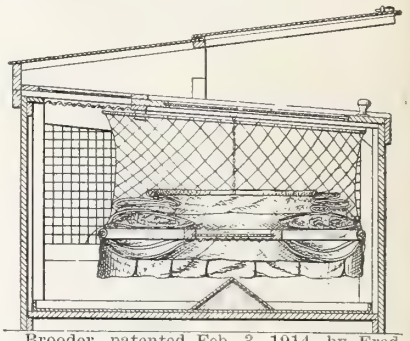


minally hinged handle levers and blades with curved cutting edge. The neck of the fowl is received in the pocket between the open blades. The operation is clean and rapid. The cutting edges of the pair of blades are shaped so that the device cannot fail to perform its functions properly. The inventor considers his mode of operation a more humane one than the ancient ax and chopping block, besides the fact that scattering of blood is avoided. Patent 1,085,793.

A new Trap-Nest made its appearance recently. It is the invention of Frederick J. Carlson, of Chicago. In one respect in particular it is a marked departure from previous trap nests. The poultryman is notified by means of an electric bell which may be placed in the house, connected by electric wires to the nest and the alarm—or notice—given, when the hen has laid her egg and wishes to leave the nest. When it is desired to keep track of the eggs, a pen or coop is provided on the side of the device next the right hand side of the figures so that a hen upon leaving the nest must pass into such a coop. After the egg has been marked for identification the hen may be released from the coop. In operation a hen enters a tubular casing disposed within the main frame of the nest, through an opening, and the nest mem-

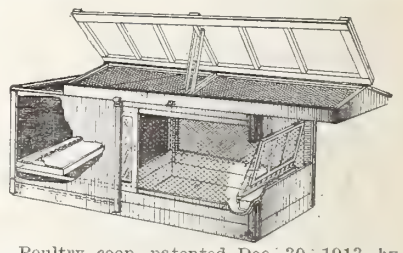
Red Sussex are coming to the front with great strides. Good specimens are worth a lot of money and the demand is far greater than the supply. "Dairy King," whose picture we show above, is a direct descendant of the first prize male at the Dairy Show, London, England. He is a superbly colored bird and has all the earmarks of developing into a winner. The picture shows the bird just as he appears in the yards of the Red Sussex Farm at Marysville, Mich., where he heads one of their many fine pens. The breed looks very good to me and I believe will make good.—L. Stahmer.

ber is rotated on its axis by means of the weight of the hen pressing downwardly and actuating a pivoted lever. When the nest member has been rotated by an auger member for a half turn it reaches a stop where the nest member remains stationary until unlocked by an egg passing through a passage that releases the stop from its engagement or until the hen leaves the nest. The stops are adapted to be disengaged upon opening of the door of the nest, permitting the continuation of the rotation of the nest to the end of its forward rotary movement when the hen enters. The weighted lever supporting the nest causes a reverse rotary movement when the hen leaves the nest. A contact member of the electric switch, engaging with a co-operating contact member serves to stop the rotation of the nest member after the hen has entered the nest. Patent 1,085,663.



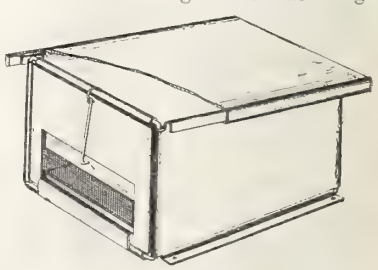
Trap-nest, patented Feb. 3, 1914, by Frederick J. Carlson, Chicago, Ill. No. 1,085,653.

A boot for animals, including poultry, is a rather unique invention. It is not for the purpose of keeping their feet warm, however. The object of the inventor, Lawrence Clarke Tipper, of Birmingham, England, is to provide a foot covering to contain some ointment or other medicinal compound or substance for the treatment of animals or poultry having diseased or injured feet. An antiseptic pad or dressing is contained within the boot. A bag or pouch having a cord passed through it at the top of the device affords means for securing it to the leg of the injured one. Patent 1,087,054.



Boot for animals, including poultry and other birds, patented Feb. 10, 1914, by Lawrence Clarke Tipper, Birmingham, England. No. 1,087,054.

An improved fireless brooder for chicks has been patented by Frederick W. Hammer, of Yale, Ill. In his device the chicks are controlled—perhaps the word "persuaded" would be better—by the lighting arrangement, to go to the hover. Chickens naturally seek the light, and in this device light is admitted to the hover for the chicks while other portions of the brooder are darkened. The brooder has a central light-admitting opening in its top, a cone-shaped member in the hover for preventing the chicks from crowding, and curtains and means for raising them to prevent light entering the space in the brooder outside of the hover. This method of managing the chicks greatly lessens the labor of the attendant since the chicks will not have to be handled and placed in the hover at night, or at other times. All that is necessary is to raise the curtain and the chicks will then assemble under the hover of their own accord. Patent 1,086,045.



Brooder, patented Feb. 3, 1914, by Frederick W. Hammer, Yale, Ill. No. 1,086,045.

Edgar W. Philo's interesting Poultry Coop, mention of which merely was made last month, is shown in the accompanying illustration. The excellence of the illustration makes detailed description of the Elmira, N. Y., inventor's coop unnecessary. Patent 1,083,029.

Poultry coop, patented Dec. 30, 1913, by Edgar W. Philo, Elmira, N. Y. No. 1,083,029.

A collapsible Chicken-Coop has been invented by Johnson B. Welch, Stockport, Iowa, and a half interest in the patent rights sold to Arthur R. Hiatt, of the same city. The coop may be packed in compact shape for transportation or storage. It has hinged sides and ends in combination with a removable top or roof. The bottom is also removable. Slidable doors, one solid and one screen door, are features of the device. Patent 1,087,414.

Chicken coop, patented Feb. 17, 1914, by Johnson B. Welch, Stockport, Iowa. Half interest sold to Arthur R. Hiatt, same address. No. 1,087,414.

DUPLEX COLONY BROODER CO.
Rockford, Illinois

Gentlemen:-

Please ship me another No. 1 Duplex to reach me before the 20th of this month. The one I have certainly is doing the work. I have had 400 chicks around it for 3 weeks and they are larger and better than any chicks of the same age I ever had. I have not lost a chick which I am willing to charge to the stove although seven which never should have reached the brooder house have been picked up.

The stove certainly does all you claim for it. I had some misgivings regarding your claim about the wind not affecting it but the burner has not overflowed once since I have had it going and I am no longer afraid of fire. I have perfect confidence in the stove and can go to bed feeling that my chicks are perfectly safe. If you had gone through my nerve-racking experience of last year of staying in the brooder house until 11 or 12 o'clock and several times until two in the morning, you would appreciate my feelings toward the Duplex. I would not trade it for a dozen ——— stoves.

I hope you sell thousands of them this season as it will mean success with a large "S" to every breeder who buys one.

Thanking you for the prompt and careful attention you have given me thus far and trusting there will be no delay in getting the second stove to me, I beg to remain

Very sincerely yours,
POLO LEGHORN YARDS.
Polo, Ill. Prop.
March 8, 1914.

White Diarrhoea Vanquished

You need no longer dread that plague. It cannot get a foothold in your flock if you install the

Duplex System of Colony Brooding

(Send for leaflet telling just what White Diarrhoea is and how to prevent it. Its Free)

This wonderful method of brooding not only does away with all danger of White Diarrhoea but positively saves you ninety per cent of the labor and seventy five per cent of the operating expense. It can be installed with less expense than any brooding system now offered and will raise enough more chicks out of the first hatch to pay for itself.

Duplex Combined Brooder Stoves and Ventilators

are simple to operate and require practically no attention. No ashes to shake down and carry out. No smoke, fumes or coal gas can get into the brooder house. Automatically ventilates the brooder house without draught or loss of heat. Heat automatically held at the desired temperature. Any possible temperature change taken care of immediately without attention from you. Burns the cheapest kerosene oil and brings chicks up to twelve weeks of age at from 1½ to 2c per chick, for fuel.

Time Is Getting Short. If you need new equipment, if your present equipment is not doing the work, telegraph your order and we will ship C. O. D by express and make you freight allowance. No need to let White Diarrhoea drive you out of business. If you will write for our free catalog we will send with it a leaflet telling just what White Diarrhoea is and why the Duplex System does away with it.

Get Free Book Write for catalogue today.

Book fully describing method of feeding and caring for chicks in colonies sent for 50c. Refund coupon sent with each book. Plans for brooder house [state No. chicks] 10c in stamps. Catalogue free for the asking.

The following prices are freight paid east of the Rocky Mountains Liberal allowance on stoves shipped west of them.

500 to 1500 Chick Size — $27.50

Duplex Colony Brooder Co., Box 500, Rockford, Ill.

THE ASCENDENCY OF ART.

By H. V. Tormohlen, Portland, Ind.

BLISS CARMEN has written a book, "The Friendship of Art," the philosophy of which I have greatly enjoyed. Nevertheless I have always been more or less skeptical about the place art, with a question mark after the word art (?), held in relation to the thorough or standard bred poultry industry. Much ink has been spilled over the question of having photographs taken and retouched by "artists" and others until it finally resolved itself into a hand-to-hand combat similar to the Mexican situation.

The knockers have been many. They have been loud in their demands that "chicken pictures should be taken just as they are and not faked a bit." The poultry artists of this country have been working quietly on, never resenting the insinuations of an ignorant public, until finally one morning the poultry public awoke to the fact that it was the poultry artists of this country, the real truly great poultry artists of this country that were the ones that were really taking the pictures just as they were and presenting them to a critical public unfaked, and that the unknown and unheard of local photographer was the one that was doctoring up the poor pictures and really doing the faking.

While at the last Chicago show I got the final scales pulled off my eyes in this respect when I slipped back through the coop storage room to where the three Ss, Sewell, Schilling, Stahmer and one or two other artists were photographing the birds. I had always been of an inquisitive frame of mind, and here now, thought I, will I quietly get onto some of the "tricks of the trade." Soon I not only became interested, but I became absorbed. I found them photographing at 9 o'clock in the morning, and here it was 3 in the afternoon before I realized it was past lunch hour. I learned what some of the "tricks of the trade" were all right, but I found they were not what I thought of finding.

The men engaged in the poultry industry in this country, beginning at boyhood and sticking to their knitting straight along for a score or more of years, are far and few between. Most of them have taken it up as a fad some time or other and gradually drifted into it.

But here I found among the artists men who had spent a lifetime, every minute, every hour, studying and working to become more proficient in portraying fowls in lifelike poses. Men raising chickens can devote an hour or two a day to their fowls and get fair results, but here were men so deeply engrossed in their work that it necessarily consumed them until it took every minute of their time; had taken some of them to Europe in their quest of knowledge, regardless of finances, until, as Mr. Sewell related, on his return the first time he barely had enough to bring him back. This is the kind of stuff these men are made of. They have staked their all in perfecting themselves to portray fowls. This is the difference between an artist and an artisan. The artist stakes his all and works for the pleasure of working, while the artisan works to profit by his labors, regardless of results.

I found Mr. Sewell and Schilling taking photos side by side in a little noisy room where the birds were being attracted every minute by the dozens of street cars passing as they can only pass in Chicago. A bird would be brought in, flopping and cackling in a hysterical way, but in a minute or two the most nervous bird in the hands of these gentlemen would be as quiet as if in a sleep.

Patience and kindness are personified in these poultry artists and this I found to be one of the tricks, but so legitimate that few of the laymen would care to use them. It was a gentle rub and a br-r-r-r and a biz-z-z-z and a tickle under the throat and a pat on the back, but never a quick or excitable move that made these works of art a reality.

It was amusing to see and hear the

performance of Louis Stahmer and A. C. Hawkins. I came up and heard them fussing in this friendly fashion:

A. C. H.—"Aw go on away, Stahmer and let me pose a bird once. You know you never got a picture of one of my birds as good as the bird really was in your life. Stand back there, Louie, I say, and you snap the picture when I pose the bird. I'll show you how a Barred Rock really ought to look."

L. S.—"Well, Mr. Hawkins, pose the bird yourself once."

A. C. H.—"Snap him, Louie. Snap him I say. Now why didn't you snap him when I said?"

L. S.—"Why, that wouldn't make a picture worth looking at."

And so it went back and forth for some little time and the poses Mr. Hawkins, the veteran Barred Rock man, the past master at training birds to pose in their coops, got more amusing and frightful to behold. Mr. Hawkins was insistent for some time that he could pose a bird as good as any d—— artist, but it wasn't but a few more minutes until he saw his folly and gave up in disgust with the frank admission:

"Well, do it yourself, Stahmer; that is what you are paid for."

With that Mr. Stahmer took the excited bird and in quicker time than I can write it had him in poses the like I had never beheld before and that I had always thought impossible and faked. It was all in knowing how.

These portrayers of birds as they are are so faithful to their trust of getting the best there is in the bird out that the way they waste exposures is a "fright to behold," in everyday parlance. With their loaded film packs they keep on pulling out and snapping and snapping and snapping on the same bird for as high as a dozen exposures. Generally the second or third exposure would be A-No. 1, but they are not content, and all unmindful of the high cost of living and the kodak trust, keep making exposures by the dozen until after two days' work the floor where these men had worked was thick and deep with these little black slips of paper, 5 by 7 inches, each one representing an exposure.

The rapidity, patience and quietness of their work was amazing. Mr. Harrison was having a number of birds photographed—a dozen or more, I should judge. Just as fast as a man was bringing them up Mr. Schilling was taking a half dozen to a dozen exposures of these Red pullets. Said I to Mr. Schilling:

"Don't you keep a note book and number these exposures and put down the leg band numbers so you can tell one bird from another? I would think after developing several of the same bird and eight or ten birds' pictures at the same time you would get confused."

I had taken into account how I could tell all my birds apart and thought I was quite smart in stating to visitors that I could tell every bird on the place like an acquaintance but I could not see how these artists could tell one bird from another when taking several pictures of the same bird and a number of birds just alike and never seeing the bird but for a few minutes while photographing them.

Mr. Schilling gave a story as an example in answer to my question. He stated he identified a bird after photographing it five or six years back and

that he never forgot a bird after once photographing it. This I deem very remarkable to say the least.

After watching the January and February poultry journals I was more convinced than ever that the real poultry artists of this country were being grossly mistreated in being criticized as they have in the past. Here they were in the January and February numbers—pictures that I had seen taken and every feather just as it was taken. There was the identical bunch of dried flower stocks that Stahmer had picked up in a corner of the Coliseum from some flower show to make the photo realistic and in every one of these Chicago photos could be seen the dried up flowers that made the photo look like it had been taken in a fence corner somewhere miles away from the city. I was convinced beyond a doubt and forever after will I champion the cause of the men who are devoting their lives to faithfully portraying the best that are in our fowls. To be convinced yourself turn back to January and February numbers of American and note how many Chicago winning birds have that same background. Mr. Stahmer, being in his home city, with opportunity to develop his work rapidly had these same pictures showing them about the show room in a few hours after they were taken. The proof of the pudding is in the eating and many of the boys at Chicago, like myself, shrugged their shoulders and gave up and were convinced that it was in the know how in taking rather than doctoring afterwards, for here Mr. Stahmer was showing a dozen or more taken the day before and which it was a physical impossibility to retouch all before he brought them back to the show room, perfect, for our inspection.

H. V. Tormohlen.

Portland, Ind.

———o———

Vineyard Haven, Mass.,
March 20, 1914.

American Poultry Journal,
Chicago, Ill.

My Dear Mr. Bell:

I want to thank my friends and fellow members of the American Poultry Association who cast their nominating ballot for me for the office of member from Massachusetts of the Executive Board of the American Poultry Association. I hope some day to run for this office and ask their support. Colonel Bryant has been a very valuable member of the Executive Board the past three years, prior to this time serving as president of the association for four years. I for one thoroughly appreciate the splendid work that he has done.

My friend, A. C. Hawkins, of Lancaster, Mass., is running for election to the board. I know that he will make a very valuable member and he well deserves this honor from his fellow members of the American Poultry Association, and I believe that Colonel Bryant will be willing to stand aside after his many years in office and allow Mr. Hawkins to be elected. I hope that my friends who voted for me on the nominating ballot will cast their vote for Mr. Hawkins on the election ballot. Fraternally yours,

Maurice F. Delano.

Thirty-eight Campine cockerels were entered in competition at the recent Coliseum Show at Chicago. The class was brim full of quality. First honors were awarded to one specimen which may well be considered a fashion plate at this stage of Campine breeding. He was bred on the Silver Campine plant of F. E. Hering, South Bend, Ind. This splendid male is about the best shaped cockerel we have ever seen. He carries his tail at a reasonably low angle, his color is superb, with green lustre and clear, snappy, white pencilings beginning well under the throat and carrying this quality throughout into the ends of a well furnished tail with flowing sickles. In these qualities Mr. Hering's males seem especially to excel. They will beautify the breed to a large extent.—A. O. Schilling.

Judge W. R. Graves and Wife.

The Stratford Farms, located at Roselle, Ill., have the pleasure of announcing to the poultry world that they have purchased the stock and good will of those famous White Rock and White Wyandotte breeders, Judge W. R. Graves and his wife, Mrs. S. H. Graves.

They also made arrangements whereby Mr. Graves assumes the management of the poultry department. As judges and breeders the "Graves" are known wherever poultry is raised, and Stratford Farms are indeed fortunate in securing their wonderful stock, together with their services.

If there is a man who knows the ins and outs of the poultry business that man is Judge Graves. Mrs. Graves, we believe, is one of the greatest poultry experts in the country. In their new venture the best wishes of the American Poultry Journal go with them. If you are interested in White Rocks or White Wyandottes, write them, for they have the goods, they can and will satisfy you. Address Stratford Farms, W. R. Graves, Poultry Mgr., Roselle, Ill.

WHITE **ROSE COMB LEGHORNS** BLACK

SICILIAN BUTTERCUPS.

By Alfred H. Dupree, Sayville, N. Y.

AS a breeder of Sicilian Buttercups, I write this article with several purposes, to show fairness to the breed, fairness to those who will take up the breed in the future and to give to other breeders my ideas after a careful study of the breed.

From what I have read upon the subject and from my experience in purchasing stock in the past and seeing the birds exhibited at the recent shows, it is beyond question that there have been in the past as many different characteristics in the different strains as there have been prominent breeders. This is apparent from the shape of the comb, the color markings and type in both males and females.

At the recent great exhibit of buttercups at the Grand Central Palace Show, New York City, in December, 1913, where there were 171 entries, it could be plainly seen how much at sea the breeders of Buttercups had been in not having until recently a standard of perfection to breed to. The divers markings and types seen at the shows are not to be wondered at when it is taken into consideration that there has been but one breeding season since January, 1913, when the first standard was adopted.

To put it in simple and concise language, the standard called for a buff bird spotted on the back, wings and sides of fluff with clearly defined black spots in the females; males to be brilliant red with black tail and sickle feathers, wing flights black and reddish brown; ear lobes red predominating, color of eye reddish bay, comb cup shape, shanks green. Specifications on shape of different parts were expressed as either "medium" or "moderate." The most noted specification on shape was in males "back sloping downward from shoulders, tail carried preferably at an angle of 45 degrees." In the female "back sloping downward from shoulders, tail well spread." For the full standard see First Annual Catalogue of the American Buttercup Club.

When the standard came out, what a lot of studying, perplexing, guessing and cussing it must have made for the different breeders when they picked the birds for their pens that were to produce the birds to adorn the show rooms of the past year. Well, the only thing for those to do who had no birds having the desired black spots was either to get some birds from a breeder who had them, or to mate up his birds so as to get the other qualities as best he could.

I have seen birds with penciling or lacing that have been winning prizes all over the country and at some of the fairly large shows. But at the last Palace Show the best breeders were there with their birds, and all the birds that were awarded a place merited the award and there were a lot of good birds that were not up with the first five. Well, in a class of fifty-six pullets there were without doubt five that were as near the standard as are produced in the world and likewise in all the other classes, each of which was large, the smallest in number being the exhibition yards with twenty entries, a very large class event.

Buttercups are not alone an exhibition bird; far from it in fact. I have found them to have great stamina, being free from disease. The male birds are very gallant. A cock bird that I have will attack me most ferociously when I catch a female in his yard. The stamina in this breed make them naturally good layers, and there is a fortune for the right man who takes up this breed and trap-nests them, thus procuring a tested and reliable laying strain. If this were done, I believe that this breed would out lay any other breed. I have kept a number of different breeds in the past but the Buttercups I find supreme in the quantity and quality of eggs produced. These birds are unlike Leghorns, being plump as partridges, having small bones and meat tender and juicy. They have a lot of meat on breasts and in this way are similar to the games. They are gentle and tame, and become great pets due partly to their disposition and partly to the fact that they are so interesting with their cup-shaped combs and pretty markings, both in male and female.

Owing to a little dispute as to what the wording of the standard adopted January, 1913, should have been in respect to comb of male and owing to the indefinite and incomplete wording in respect to color of female, the standard was revised at the American Buttercup Club meeting held in connection with the Palace Show, New York City, in December last. This standard, at the present writing, February, 1914, has not yet been given to the public, but from the news gathered at the Show, it was generally understood that the shape of comb would be as understood generally from the reading of the old standard, cup shape with erect serations; following the illustrations by O. W. Shilling published in the American Poultry World of November, 1913. The markings of the female are to be

Famous Poultry People

Whom You Know

The Stratford Farms take pleasure in announcing to the poultry world that they have secured the stock, trade and good will of the famous experts and breeders, Judge W. R. Graves and Mrs. S. H. Graves, breeders and exhibitors of White Rocks and White Wyandottes.

In making this deal, we were also fortunate enough to secure the services of Judge Graves as Manager of our Poultry Dept.

This means that our former patrons and prospective customers will be furnished with the "Graves World Renowned Blue Ribbon Strain" fowls.

Mr. and Mrs. Graves as breeders and judges are known by all poultrydom—they have judged at most of the leading shows and Mr. Graves was one of the judges at the World's Fair.

Just write your wants. They will give you their personal attention and will only be satisfied when you are.

Our farm has excellent shipping facilities, being located just 24 miles from Chicago on the C. M. & St. P. R. R.

Write Today—We have the Stock and can satisfy you.

STRATFORD FARMS

W. R. GRAVES, Mgr. Poultry Dept. Roselle, Illinois

the same as before but calling for black spots or bars.

If the breeders will stick to this black barring in the females, it will not be many seasons before a most beautiful bird will be developed. This will be the keynote to the success of the breed, and the future Buttercup females will be nicely barred and this barring should and probably will have a green sheen to it. In a few years the Buttercups of today will be nothing compared with the Buttercups of tomorrow both in beauty and utility. Keep the breed large and vigorous; give it beauty; and success is ours.

I am anxious to see this worthy breed admitted to the American standard of perfection, and another demonstration such as that at the Palace Show ought to do it. Let the artist who draws the illustration for that standard study the breed and put the standard as high as is possible to be attained. L. D. Howell, secretary of the Palace Show, in his talk before the A. B. C., said that he did not know of another breed where the possibilities were greater than with the Buttercups.

To those starting in with Buttercups, my advice is get the best that money will buy. Be willing to give a fair price for good stock or for eggs from good stock. To those already breeding Buttercups and wishing to improve their flock, my advice is to introduce new blood either on the female side by procuring some well marked hens or pullets, or, if you can rely upon the party with whom you would deal and you are convinced that he has good stock, by purchasing a cockerel. It is harder for the inexperienced to tell a thoroughbred cockerel from its markings than to tell a thoroughbred pullet.

The demand for good stock is greater than the supply especially for hens and pullets, and there is a great demand for eggs for hatching.

This valuable breed has been in this country for a number of years but with no one to herald their qualities until recently when they have just been brought to the notice of the poultry world. The American people have not been slow to appreciate the merits of this fowl and the breed is gaining in favor very fast. Why is it? It is because there is a demand for a breed that will combine the utility and the fancy and moreover be hardy.

BUFF MINORCAS.

As a new creation, Buff Minorcas are being given much attention, and are becoming very popular. They are among the first to come to the front in so short a time as the latest standard breed. Of course, there's a reason. While the originators were ten years making and perfecting them to standard requirements they are now a standard breed, having been entered in the American standard at the last American Poultry Association meeting. And being solely an American creation makes something we should be proud of. They are great layers and will add much to the uplifting of the poultry business.

Buff Minorcas are identically the same shape, size and character as the black and white varieties. Their color being the same as all other buff breeds, a beautiful buff to the skin, and breed as true to color as any buff fowl. It is doubtful if ever a new variety has

Ship Day Old Chicks in This Safe Box

We ship thousands of baby chicks each season from *Tywacana Farms* to all parts of the country in the strong but light and compact

Wright Box
THE RIGHT BOX

The most satisfactory box for shipping chicks. It has adjustable ventilating regulator which meets varying weather conditions more satisfactorily than any other device. Chicks do not trample, smother or get chilled. Made of double, reinforced corrugated cardboard—it is

Strong—Simple—Safe—Sanitary

The New Wright Egg Box is the strongest and lightest package for shipping hatching eggs or fresh table eggs. Easy to pack—each egg has absolute protection—cannot shake or jar. Both chick and egg boxes are shipped to you flat and are easily set up and packed for shipment to your customers.

Prairie State Brooder Equipments

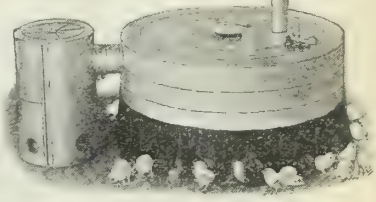
No matter what incubator you have—when the chicks are **hatched—then** you need a brooder that you can depend upon. It is the critical period of your success, and the most efficient brooder you can buy is by all odds the most economical.

Prairie State Stove Brooders

are made to meet the demands of poultrymen who hatch from 500 to 1,000 or more at a time. This stove brooder is made of heavy cast iron, is durable, substantial and portable. Chicks cannot hover underneath. Burns hard coal at a cost of about 7 cents a day in ordinary weather.

Hover space provided by re-inforced galvanized steel canopy which is hinged in center to allow operator ready access to all parts. Will last a lifetime. **Price $30.00.**

Prairie State Portable Hovers



Made of galvanized steel. Designed to fill every requirement of those who brood flocks of 50 to 100. Fire-proof, positive ventilation, automatic regulator. Burns one pint of oil in 24 hours. **Each $8.50.**

EACH, $8.50

Full information on all kinds of brooders FREE

Prairie State Colony Brooders

Made in three sizes, **$12, $16 and $20.** See catalog for description.

Prairie State Hot Water Mammoth Systems

Made to conform to individual requirements. Send drawing of your houses for estimate as to cost of installation.

Prairie State Incubators

Three series—an incubator that will meet every requirement and every pocketbook. Send for catalog.

CHRISTIE'S
S. C. White and Brown Leghorns

Having been bred for 14 consecutive years, represented all over the world, they stand today without an equal as egg producers, the foundation upon which all branches of the poultry industry hinge. We have been shipping our

S. C. White and Brown Leghorn Day-Old Chicks and Eggs for Hatching

to all parts of the United States and foreign countries for ten years, and during this time we have shipped over 1,000,000 chicks and 800,000 eggs for hatching, and we have yet to find one displeased customer, a record attained by very few. Before placing your order, write today for our illustrated catalogue, and read what thousands of our pleased patrons say in regard to the **World's Greatest Layers.** **"Better Be Right Than Sorry"**

S. C. White and Brown Leghorn Chicks, $15 per 100

WAYNE POULTRY FARM F. W. CHRISTIE, Prop. **Box 71, STONY POINT, N. Y.**

been offered to the public that was as perfect in this respect. Color of skin a pinkish white; eyes a dark hazel; legs a pinkish white. They are considered to lay the largest and whitest eggs of all varieties; eight Minorca eggs weighing as much as the average dozen, and bringing from 2 to 3 cents per dozen more on the market than all others. Combining all these good qualities with the buff color simply puts the Buff Minorcas in a class by themselves, and a breed that's going to mean much to all who take them up early. They mature early, making the finest of table and market fowl.

O. K. Hobbs.

Hickory Grove, Ky.

Cramer's Red Feather Poultry Yards, Eagleville, Mo.

The above is F. S. Smith, of Hamilton, Ohio, the largest exclusive Single Comb Buff Leghorn Breeder in the world. He is in position to ship thousands of eggs and thousands of day-old chicks at this time.

Cut made from unretouched photo.

Black Orpingtons, when they are bred right and have the type that is prescribed for them, are a truly fine variety of fowls. The above hen, winner of first prize and championship at Indianapolis, 1914, is an exceptionally fine specimen of the breed, and comes as close to Standard requirements as any I have handled. Her sons and daughters are distributed in the many fine pens the Wild Rose Farm, of St. Charles, Ill., have mated for the season, and their catalog is well worth sending for.—L. A. Stahmer.

THE CHICKEN MAN AND THE GARDENER.

I WOULDN'T have missed it for worlds,'' said the chuckling man as he hurried down stairs.

He had just been looking out a rear second story window. That was why he chuckled. His home is on a street in a newly developed section of—, well, an Ohio city. From a rear second story window he can see into the back yards of two neighbors who live on the next street.

One of these neighbors has a chicken yard at the back of his home, and the other had last spring a garden full of nice, green sprouting things. And when the chuckling man first looked out his rear second story window this particular spring day, the man with the garden was hoeing among his green sprouts.

As the man in the window watched, a chicken strayed from the other neighbor's yard into the garden, pecking among the green sprouts. The man with the hoe suddenly held the tool poised, waiting. Nearer went the chicken.

Zip! The hoe cut off the chicken's head with one sweep. In the next instant the man had the chicken covered with earth, and was continuing his hoeing.

Another chicken strayed into the garden. It got within reach of the hoe, and—zip—it's head was gone, and it was buried. And the man in the window chuckled and chuckled.

He knew now why the man with the chicken yard was always complaining that his chickens decreased in number most mysteriously.

The chuckling man, as he ran down stairs, had one idea in mind. That was to get to his club and tell the story. For both the man with the garden and the chicken yard man belonged to that club, too, and—

''Great Caesar! What a story for the boys!'' the chuckling man chuckled as he hurried along.

He reached the club, and as he entered, another man whom he knew as a chicken fancier and an authority was talking to several men grouped around.

''Yes,'' this man was saying, ''I have given up all breeds but my Anconas. I'm going to stick to them. They're remarkable chickens. They're the greatest layers in the world. I call them 20th century egg machines. They present a handsome appearance, are hardy, and they—''

''How big are they?'' put in a listener.

''A little larger than Leghorns,'' said the fancier. ''Hens weigh about four pounds, males about five. The medium size is the best layer, and as they are essentially an egg-producing fowl, the medium size is the right size. I've experimented with eight or ten breeds, as you fellows know, and I never saw anything like the Anconas for laying eggs—large white eggs, they are. They lay eggs when heavier breeds would be setting.''

''I understand Anconas gradually are

MAKE HENS LAY
By feeding raw bone. Its egg-producing value is four times that of grain. Eggs more fertile, chicks more vigorous, broilers earlier, fowls heavier profits larger.

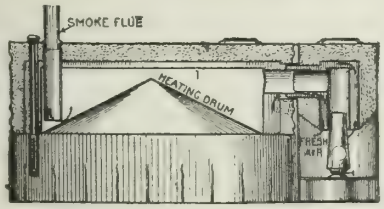
Buy An Incubator of Standard Quality At Half The Standard Price

The Great Repeat Order Incubator

"The New Buffalo"

"Prove all things and hold fast to that which is good."

Mr. A. M. Faivre, Greenville, Penna. on Feb. 6th, wrote: ''Please send me another No. 3 Buffalo Incubator. I have used the Buffalo for some time, and when it comes to hatching eggs, she is head and shoulders above other makes.''



Mr. Howard C. Miller, Gilbertsville, N. Y. ordered one No. 3 Buffalo in December 1913, another in February 1914, and two more in March.

March 13th, Mr. W. S. Haywood, Ellington, Conn., wrote:— ''Please send me at once a No. 1 Buffalo Incubator and a Handy Hover. I could have bought a Standard machine at home, but the Buffalo owned by Mr. Lesley Sadd of this town hatched over 90 per cent of my eggs last year, and the chicks were certainly splendid.''

On March 19th, Mr. Sadd ordered another Buffalo for his own use.

On the same day repeat orders were received from Mr. C. E. Scott-Warring, Saratoga Springs, N. Y., Mr. Charles Gerber, Webster, Mass., Mr. George A. Breed, Supt. for Hon. Joseph H. Choate, Stockbridge, Mass., and Mr. Sam Faloon, Kensington, Ohio, who was in with his fifth order since 1912, and who says ''I wouldn't trust my eggs in any other.''

There can be no argument that would better prove the success of the New Buffalo

Ransomville, N. Y., May 10, 1913.
Buffalo Incubator Co.,
Gentlemen:—We want fifteen or twenty Handy Hovers for our own use to use in addition to our present brooding system. The Handy Hover certainly does well for our customers. The results are just as good as from hovers costing more money, and the Handy Hover is the most convenient and economical to operate. W. R. CURTISS & CO.

Send postal for fuller description.

BUFFALO INCUBATOR CO. CHAS. A. CYPHERS, Pres.
465 DEWITT STREET BUFFALO, N. Y.

supplanting all other breeds on large eastern egg farms. I should think they would. On account of their hardiness, the general fertility of their eggs is strong. I've known eggs shipped 3,000 miles to hatch 90 per cent and at home or nearby eggs often hatch 100 per cent. You can't beat that, you know.''

''Although they lay many more eggs than larger breeds, they don't eat as much. They require little attention to produce eggs. You don't have to cook and mix hot mashes for Anconas, or try to force eggs. They get along finely when confined, and cold weather seems to have practically no effect on their egg production.''

''They say they're wild,'' said a man who knew a little about chickens.

''Well you can keep them in a five or six foot fence. I wouldn't call that wild,'' returned the fancier. ''In fact, mine are very tame. I'm for them on that account, because my wife and children like them.

''Yes, sir, Anconas are the chickens to have. Rose or single comb, they lay eggs as no other chickens do. They look beautiful, are hardy, don't need fussing, and are right for city or country. You—''

But here the chuckling man broke in, for the simple reason that he could hold his story no longer.

''Well, while you're talking of chickens—'' he began with a chuckle, and related what he had seen from his rear window. The men grouped in the club room roared with laughter. The fan-

cier spoke as he wiped his eyes.

"Well, that wouldn't have happened if the man with the chicken yard kept Anconas," he said.

"Why?" asked one of the group.

"Because an Ancona would have laid an egg in front of the man with the hoe before he could have cut off its head, and he would have let it live," grinned the fancier. "And the moral of that is—"

"Keep Anconas," chuckled the chuckling man.

Replies to Mr. Harrington.

Editor American Poultry Journal:

The article on "The Value and Use of Oxygen," page 1558 of Vol. 44, No. 12, reads like the usual drivel of an advertising quack. The author quotes liberally from medical books and physiologists, but his quotations are not to the point. They were written of animals that are breathing the air. Do they apply to hatching eggs?

A little examination of the natural

An almost Ideal Single Comb White Leghorn Head, awarded Special Prize, Indianapolis, February 2-7, 1914. Bred and exhibited by Frank E. Hering, South Bend, Ind.

process of incubation—and we can't improve upon that—will show that his conclusions are not good. The mother hen goes off the nest for food each day during incubation, and in doing so airs the eggs. She does not do this the last two or three days of incubation. Either instinct teaches her when the 20 days are over, or her auditory nerves tell her of the first feeble peck at the shell by any of her coming brood, and from that time she clings to the nest with a pertinacity worthy of a good cause. How can the carbon dioxide, so plentiful in that nest during these last days, make its escape? Why are not all the chicks poisoned by this deadly gas, to die in the shell under the brooding hen? Carbon dioxide gas is heavier than air and naturally sinks to the bottom of the nest.

According to his theory the eggs would be lying in a vessel of carbon dioxide, because the hen sitting on the nest would prevent any interchange between the CO_2 in the nest and the outside air by means of drafts or otherwise. The theory does not hold good in Nature's way of incubation and the author has not brought out a single fact to prove that it is true in artificial incubation. White diarrhœa is a germ disease and can in no wise be traced to the effects of carbon dioxide in the incubator. Besides, all modern incubators are provided with means of proper ventilation which remedy the defect assumed by the author.

I would rather attribute chicks dead in the shell to some failure to maintain proper temperature or degree of moisture in the incubator, or to some lack of vitality in the birds from which the eggs were obtained, or a failure to select only well-shaped eggs for incubation.

This whole article has the tone and earmarks of those produced by the medical quack who advertises to perform miraculous cures by means of some mysterious concoction or wonder-working appliances. There is nothing to the claims he sets up from the standpoint of either theory or practice. You owe it to your readers to warn them against spending their good money to no purpose in order to learn that this plausible notion is a fallacy.

Chicago, Ill. J. P. Houston, M. D.

[Note.—The above letter was mailed to me by our Chicago Office. Until that time I had not noted Mr. Harrington's article, which, by the way, found its way into our narrow-column matter through the business office. Mr. Harrington invited "thought." Well, we are getting it in Dr. Houston's letter and in others. Personally, I agree with Dr. Houston's statement concerning incubation. My own tests in natural and artificial incubation lead me to concur with him. I did not get any conclusive results from trials of oxygen treatment in incubation. Neither have I noted any harmful results from presence of carbon dioxide in hens' nests or modern incubators. Some investigators have endorsed the oxygen novelty. Others, equally as earnest, have pro-

nounced in favor of more carbon dioxide. The fact is that both factions are doing a lot of guessing, and so long as they guess at the expense of their own funds it makes little difference, but we don't like to see our readers blowing in their hard-earned shekles on experiments of doubtful value. We haven't made any very great advances in artificial incubation in a long time, but we are continually getting a lot of new guesses, new talking points and novelties. We haven't improved on hen hatching and we are not doing artificial hatching any better than the ancient Chinese and Egyptians. Modern incubators when properly located and operated will yield very excellent results, and when conditions are wrong the results are poor. Mother hen is not much better off in that respect; sometimes she yields good hatches and sometimes she does not.

Mr. Harrington is all wrong when he says: "Nature intended that every egg, when properly fertilized and properly subjected to the process of incubation, would produce a strong, healthy chick."

Nature intended nothing of the kind. Nature is prodigal with seed and provides for the survival of the fittest. The author all through that oxygen article shows a profound ignorance of natural laws. Chicks die in the shell whether the eggs are hatched under hens or in incubators. With incubation properly conducted, either by natural or artificial means, the number of chicks dead in the shell is in direct proportion to the survival of the fittest—the poor seed may sprout and die at any stage; the good seed develop into the well-finished product.

Take a whole hatching season through, with many hens, and the percentage of chicks dead in the shell is considerable, though the incubation is natural. Every fertile egg set is not destined to hatch a perfect chick. I have operated incubators and had exceptionally good hatches when I felt that the machine had hatched too well and brought out chicks that were not fit to live, and I have also had unaccountably poor hatches. It is because incubation, either natural or artificial, is such a big gamble that we get such a wide variety of "sure thing" information about it. Any plausible theory is eagerly seized, because we are eager for better results and we still have so very much to learn about what life really is, what it is for, and how it develops.

Prince T. Woods, M.D.,
Managing Editor.]

———o———

The keeping of fowls of various sizes, ages, and kinds together in such a manner that the law of the survival of the fittest is apt to be exemplified is wrong, and must not occur if one requires a profit.

Fowls must have exercise when confined. To provide this scatter the grain food in the litter on the floor and force them to keep constantly at work scratching for it. This will insure a free circulation and perfect digestion.

RAISE EVERY CHICK on "HEN-E-TA"-"HEN-O-LA" The *Phosphatic*-System!

The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.

The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.

Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*

HENETA BONE CO., Dept. 1, Newark, N. J.

ALDRICH POULTRY FARM, WHITE ORPINGTONS.

A Visit to These Famous Yards—Their This Year's Winners and Matings — Superintendent Rawnsley's Work.

By H. P. Schwab, Eastern Representative A. P. J.

It happened that we reached Columbus, O., in the very midst of one of the greatest storms of the year; it was cold, the wind was rushing by and the snow falling, covering everything with a mantle of white. But neither snow nor wind could chill our ardor. We were headed for one of the country's greatest poultry plants and desires led us on in spite of all conditions. Our welcome was warm and hearty; we found Superintendent Rawnsley busy, but with things well in hand for the storm and with plenty of time to guide us around and to have a good visit with him.

For the past several years this line has been a great winner the country over. We have seen them at our best and greatest shows, where they have made records year by year that reflect the greatest possible credit to them. For all this we consider their winnings made this season of 1913-14 to be superior to any of the past. They have been up showing against the best breeders and at the best shows and finished almost with a clean record for all in all classes and shows. Note the following:

At the great Allentown Fair, September, 1913, with but ten entries, they won: Cock 1-2, cockerels 1-2-3, hens 1-2, pullets 1-2, futurity special pullet, best display, etc. First pen was won by a customer of theirs.

At Atlanta, Ga., their line won a total of seventy-six points against seventy points for all others combined, including three first prizes.

At the great Chicago Coliseum Show, December, 1913, with nineteen birds entered, they won: cock 1-3, cockerel 1-2-5, hens 2-4, old pen 1, young pen 1, special for best display, etc. (No pullets shown.)

At the "World's Greatest Show," Madison Square Garden, New York, December, 1913, in the largest and grandest class ever brought together, their phenomenal winnings were a total of forty-six points against fifty points for all competitors combined. Cocks 1-3-4, hen 1, cockerers 1-2-3, pullet 2, pen 1. Here they met the best and the victory is theirs; theirs to profit and enjoy.

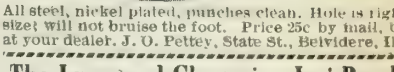
When here a year ago we were pleased to favorably commend this line of S. C. White Orpingtons, but what they then had is not a marker to the quality found here this season, speaking generally, for they have easily improved their line by their own breeding fully fifty per cent. Both old and young were in the best possible condition and the proven breeders of last year with their choicest young were here mated in a manner to insure further improved results.

Their Matings as Seen.

We found in their twenty-five pens much to commend. Each had its feature and that feature was the general evenness in size, shape and style and the evident even quality of all. Eyes were unusually good; we did not see an off-colored or weak eye on a female. Combs were a revelation—in size they were consistent with the variety, they were straight and well set and finely serated to a wonderful degree.

In pen No. 1 we again noted their grand old champion, "Snow King," first prize cockerel at Chicago, December, 1911, in a class of forty-two birds. This grand old fellow improves with age. We have never seen him better or stronger; full of vigor, he promises much for this season's breeding. He has a most beautiful comb and the best possible form. His mates are a beautiful lot of highest type and color.

"White King," heading pen No. 2, is well named. He also has superior size and form and heavy bone. He was first cock at Chicago, December, 1912. His mates are a selected lot that promise much.



Pen No. 3, headed by a giant weighing eleven pounds, a beauty in finish and a very grand cock. Pen No. 4 has their famous Madison Square Garden, New York, first prize pen cock of 1912-13, who also won other honors at other shows—at Allentown, where he won the futurity, cockerel stakes; Atlanta, Chicago, etc. Mates are beauty females of finest quality.

In pen No. 5 is their first prize pen

All steel, nickel plated, punches clean. Hole is right size; will not bruise the foot. Price 25c by mail, or at your dealer. J. O. Pettey, State St., Belvidere, Ill.

The Improved Champion Leg Band

Aluminum only; two sizes; adjustable to fit any fowl. Held by double lock, can't lose off. Postpaid 12-15c; 25-20c; 50-35c; 100-60c. Initials 10c per 100 extra. 50 or less, 5c. Also Pigeon Bands.

E. G. CURTIS -:- ATSION, NEW JERSEY

STOP Chicks Dying In the Shell

Which poultryman

are you—the one that gets 500 chicks from 600 eggs—or one that gets 500 chicks from 1,000 eggs?

The EFFICIENCY and modern methods in other lines now apply to the hatching of chicks in incubators.

Your chicks die trying to burst the shell—or soon afterwards from white diarrhœa caused by being poisoned by the carbon-dioxide gas they throw off in the air they breathe. During the last three days of the hatch you can save practically every chick and make it vigorous so that it will resist chick ills by using the

Merkley Oxy-Vitalizer

to supply them with moist oxygen. Can be attached to any incubator in five minutes. Self-operating—no watching. One can be used for several incubators. Lasts a life-time. Multiplies your profits on every hatch. Write for free literature or better still write for a VITALIZER. The price is only $3.50 parcel post prepaid, and it will buy itself in one hatching.

Merkley Mfg. Co.

238-44 Onondaga St.

J. CARLTON JACKS
LITCHFIELD MINN.

We Tell You How To Raise Every Normal Chick You Hatch

The most experienced, best equipped, largest breeder in the county, doesn't raise on the average more than 50 per cent of chicks hatched unless he uses

Whiting's White Diarrhoea Remedy

a liquid preparation given with their first couple of feeds, which makes the chicks proof against White Diarrhoea and bowel complaints and

Enables You to Raise Every Chick

hatched, unless it is a chick that you know from the start cannot live. Besides that Whiting's White Diarrhoea Remedy

Makes Chicks Grow Faster, Stronger, Larger.

If you want the finest chicks you ever raised, and to save the 50 per cent or more that you know have died each year, get today a 50c or $1 bottle of Whiting's White Diarrhoea Remedy—a 50c bottle is usually enough for 150 chicks. Sold by many dealers or mailed on receipt of price. There is positively no substitute.

157 Water Street
NEW YORK

male at Madison Square Garden. New York, this season, one of the finest males ever seen. He has every quality we consider valuable in breeding and above all a most charming back and tail. Our admiration for this male and females leaped beyond bounds.

Next in pen was another New York winner of this season, a grand big bird and richly mated. Pen No. 7 will surely give results; some of the finest females in here, backs and spread of tails magnificent.

"Quality Prinze" heads pen No. 8, who was first prize cockerel at the late great Chicago show. He is a bird of quality and admirable in every way, and to our mind is worth all they wish to ask for him. Mates are a select lot of finest style females. Following him was another Chicago winner and he looks fit to win any show today.

Heading pen No. 10 is a son of their grand old champion, who won two first prizes at the great Garden, New York, show, and is himself a Chicago winner—a most desirable bird and mating. Other pens up to No. 15 were all headed by New York and Chicago winners, birds of worth and all grandly mated. The females found in all these pens are most desirable—a grand even lot sure to produce superior quality.

Their special pen, headed by "Quality King," who has won first prize at Madison Square Garden, New York, as cockerel and also as cock and is the only White Orpington with a record of two wins at New York. He weighs nearly twelve pounds and carries well, being strong and hardy. His color is of the best, fine comb and rich red eyes. He has proved himself a wonderful breeder and is a most desirable and valuable bird. His mates are eight females, each one a winner and all of highest type and purest white color. The cock also is absolutely white.

Their nine other pens were also mated with the greatest of care and either headed by a noted winner, or by a male bred from their best and one they have refused to sell. In these the same character was seen that was noted throughout this entire line. Size and shape were extra good while color was pure and sound.

The females also compare very favorably with the others and while they sell eggs from these at a less price I am most certain of their value and that they will produce birds of superior quality and rich in breeding values.

From first to last, this truly is a great line. Their records are of the very highest, and regardless of these they have the birds and the quality to breed and to show those who visit them. In their stock and in their matings alike the hand of the master can be seen. Mr. L. Rawnsley, the manager, has full charge of all and to him great credit is due. He has mated and bred these birds and has brought them up to their position. He has made them what they are. His success and that of this line are equally great and both well deserve all we can give them.

Here is seen the real value of breeding—quality; that which we hold above all else is of greatest importance to any line and to any breed. From such we must expect and get the best of value and the choicest and highest quality.

H. P. Schwab.

To All Houdan Breeders.

The American Houdan Club is making arrangements to display eggs and dressed fowls at next season's shows, the idea being that such a display will prove a valuable object lesson as to the real worth of the bird. They also intend to enter in the name of the Club, pens of Houdans at the different egg laying contests.

To get material for showing the value of the Houdan as a producer both of eggs and meat, they ask all Houdan breeders to keep a record of what their hens and pullets are doing as layers. Send these records to the president, but be sure they are authentic records, not what you think they are doing, but what they actually are doing. This information will not be made public without the consent of the parties who furnish it.

Now, whether you are a member of this club or not, you should help in this work, but first of all join the club. Get together and show that the Houdan is not merely an ornamental breed, a fowl for exhibition, but that it is a real utility fowl, good for eggs and meat. Now get busy and write the president. Address Jas. Abernethy, West Pembroke, Maine.

IRA M. CROWTHER, Box A, Willoughby, O.

EASTERN BREEDERS' NOTES.

BY H. P. SCHWAB.

The annual catalogue of the "Maryland" Strain of Barred Rocks is one of the neatest and handsomest we have seen. We congratulate Mr. Robert J. Walden, Middleburg, Md., the originator of this line. His records have been won at Pittsburgh, Hagerstown, Philadelphia, Baltimore, Williamsport, M. S. Garden, New York, etc. Beside giving a description of his matings, it also describes the quality of stock he sells at prices given. If you are a breeder of Barred Rocks, send for this catalogue and mention A. P. J.

Woodcrest Partridge Wyandottes as bred by Chas. H. Wood, Worcester, Mass., were the sensational winners at the late M. S. Garden, New York, Show. For this year he will sell eggs for hatching at $5 and $10 per setting. Send for his mating list: it is free to all.

We have always known Mr. James Abernethy, West Pembroke, Me., as a champion of the Houdans; he is one of their oldest breeders and has always been found in the front rank as a booster unfailing of this grand old variety. His stock has been liberally shown and we have seen it as winners for years at the leading shows. This year he is selling eggs for hatching from his selected matings for $5 per setting; others at $3. Write him for particulars.

The remarkable record made by Mr. A. C. Hawkins, Lancaster, Mass., at the late Chicago show, where he won cocks 1-5, cockerels 1-3, pullet 1 and champion female, pullet-bred cocks 1-2, cockerels 1-3, first cockerel mating pen, second pullet mating pen, best display, champion male, champion female, all shape and color specials on both male and female and several other specials completes the best record ever made at that great show on Barred Plymouth Rocks. It is a pronounced victory of positive worth. Mr. Hawkins' catalogue gives all information and is mailed free for the asking. Mention A. P. J.

Rose Comb White Orpingtons as bred by Mr. H. P. Kettering, Carrick, Pa., are one of the leading winning lines of today, we saw them highly placed at New York and Pittsburgh this year and at others in the past. Mr. Kettering also breeds Single Comb White and Buff Orpingtons and Pekin ducks. In ducks his records show him to be unbeatable.

Mr. Arthur G. Duston, South Framingham, Mass., with his splendid White Wyandotte win at M. S. Garden, New York, and selling winners for Boston and many other shows of note, particularly the first Boston cockerel, should receive every consideration from the breeders. We hope soon to see him and tell our readers more of his birds which we know are better than usual.

The "Lady Beautiful" Strain of Barred Rocks as bred by Mr. C. N. Myers, Hanover, Pa., is well portrayed in a beautiful catalogue just issued. It gives this line's winnings for years, which include first prizes at M. S. Garden, New York, and other leading shows. It also describes his matings and stock at stated prices. The catalogue is sent free for the asking.

Wm. Cook & Sons, Scotch Plains, N. J., have as usual shown their birds at all the season's great shows and have made more records of note that quality alone can bring. They breed all varieties of Orpingtons. Write them your wants and for mating list.

Mr. E. F. Dean, South Williamsport, Pa., breeder of Silver and Golden Campines has filled record books with his season's winnings. We hope soon to see this whole line and to write them up.

Mr. Jas. T. Huston, Williamsport, Pa., one of our old and reliable Barred Rock breeders, has an exceptional line of mating this year that promises much.

Our trip to Hope, Ind., to see the Fishels and the Aldrich Orpingtons at Columbus, O., was a trip worth making. We also spent two days at the home of the A. P. J.

Mr. Art C. Gilbert is now connected with the Pine Lodge Farm, South Lincoln, Mass., where he will breed his original line of Blue Orpingtons of which he is the originator. Associated with him is Mr. W. H. Depper, one of the first importers and breeders of Blue Orpingtons in this country.

The "Lucia Strain" of S. C. W. Leghorns, as bred by Mr. Albert Waldron, Titusville, Pa., is rapidly coming to the front. We have seen this line as winners at two shows this year. It has class; the

White Orpingtons

Winners of more than half of all first prizes at five leading Illinois shows. Eggs priced at half their value. Send at once for mating list.

New American Java Association.

At a recent gathering of Black and Mottled Java breeders held in Albany, N. Y., the following officers were elected: A. E. Huber, president, Newpoint, Ind.; Wm. C. Martens, first vice president, Minooka, Ill.; W. J. Olliver, second vice president, Barre, Vt.; C. Boland Ballentine, third vice president, Portsmouth, Va.; secretary and treasurer, S. W. Morton, of Albany, N. Y. The following compose the executive committee: Mrs. W. P. Masten, Pleasant Valley, N. Y.; J. J. Brinkerhoff, Minooka, Ill.; C. B. Brown, Whitney Point, N. Y.; A. M. Stocking, M. D., La Harpe, Ill., and W. D. Van Wagner, Salt Point, N. Y.

The plans of this association are very unique and anyone who is breeding Javas should get in touch with the secretary.

Plans are already under way for the first annual meet to be held next winter.

Annual Meeting Columbian Plymouth Club.

At the regular annual meeting of the American Columbian Plymouth Rock Club, held at Pittsburgh, Pa., the following officers were elected for the ensuing year: President, Sam'l W. Bradley, Lime Rock, Conn.; vice presidents, Jas. H. Taylor, Woodstock, Ill.; G. W. Garlock, Ft. Atkinson, Wis.; J. F. Walthers, Pittsburgh, Pa.; secretary-treasurer, D. Monroe Green, Waterville, N. Y. It was voted to issue a handsome new publication to be known as the "Columbian Rock Bulletin." It will be devoted exclusively to Columbian Plymouth Rocks, containing instructive articles, illustrations and other valuable information that should be in the hands of everyone interested in Plymouth Rocks. Sent absolutely free to anyone for the asking. Address D. Monroe Green, Waterville, N. Y.

Canadian White Wyandotte Club.

Held their annual meeting at Guelph, electing the following officers for the coming year: Hon. President, L. H. Baldwin, Toronto; President, Joseph Russell, Toronto; First Vice President, R. W. Vont, Brockville; Second Vice President, W. Archer Paisley; Secretary-Treasurer, Sid Saunders, Ingersoll. Directors: John R. Henderson, William Wilson, Charles Massie, A. M. Cameron, L. R. Guild and F. J. Hind.

Plans have been arranged for a big show for next season for White Wyandottes exclusively, many valuable prizes have already been donated, among them being a beautiful $500 piano, donated by Mr. Russell.

This promises to be the greatest show of its kind ever held and the cash prizes will exceed anything ever given.

R. C. White Minorca Club.

This Club will offer cups at all of the big shows the coming season, therefore if you are a breeder of this fowl write for complete information. Address Fred Alger, Secretary-Treasurer, Waukau, Wis.

F. N. Perkins, of Freeport, Ill., has issued one of the handsomest mating lists we have seen for some time. Through a cut out in the front and back cover the heads of a male and female Partridge Rock show in natural color. The book is handsomely illustrated with many views on the Perkins Farm and describes many of the fine pens from which he is selling eggs for hatching. Partridge Rocks are coming rapidly to the front for the reason that they are such excellent winter layers and combine this quality with remarkable beauty.

J. Carleton Jacks, Litchfield, Minn., breeder of the Golden Beauty Strain of Buff Wyandottes, made some wonderful show records the past season, among which was his great win at the Minnesota State Show, 1914, where he won 1, 2, 3 cock; 1, 2, 3, 4, 5 hen; 1, 2, 3 cockerel; 1, 2, 3, 4, 5 pullet, and all specials. If you are in the market for anything in the Buff Wyandotte line you should get in touch with Mr. Jacks at once. He guarantees satisfaction.

CATALOGS AND MATING LISTS.

As Seen by Chick.

This is the time of year when every poultryman, large or small, is issuing a catalog or mating list. In the course of a day, I see many good ones and some that are only fair, but each and every one tells its little story and tells it as completely as could be told in an hour's talk with the purchaser.

It struck me that our readers should no doubt be interested in seeing the summary of some of these catalogs and mating lists, so I herewith give them to you as seen by my own eyes, if interested address is given and you may write for a copy which will be mailed you promptly and free of charge.

From Glendale, Ohio, comes the beautiful 16 pages of Premier Partridge Wyandottes issued by the Sheffield Farm. On the first page will be found a reproduction of their first prize pen at the Garden show of 1912-13, next follows a short history of the Premier Strain, then facts and figures as to why Partridge Wyandottes are profit-makers, following this comes their matings which covers eight pages, and includes their New York, Chicago, Boston and smaller show winners. You then find their prices both on stock and eggs, also Baby Chicks, along with their guarantee under which all goods are sold. Then comes the general description of the birds which they have for sale, together with some beautiful half-tone cuts of same. Following this comes a list of their hundreds of prizes won at shows in all parts of the country, then comes letters from many of their satisfied customers showing you just what sort of treatment you may expect when you buy from Sheffield Farms. All in all it is a catalog that will prove of interest to anyone interested in Partridge Wyandottes.

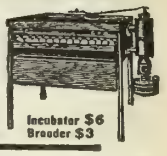
One of the recent ribbon winners at the late 1914 Chicago show is Fred B. Keifer, owner of Highland Farm, Marshall, Ill. Mr. Keifer has just issued a new mating list which gives the list of his late show winnings, together with a complete description of the six pens which he has mated. This list also gives a reproduction of a couple of his choice birds, also gives you prices on eggs, chicks and stock, all of which are sold under guarantee. If interested in White Wyandottes be sure to write for copy of this mating list.

A. B. Porter, the Orpington specialist of LaSalle, Ill., has what is known as the Golden Strain Buff Orpingtons. When he came to issue his mating list for 1914 he carried the color scheme of his Orpingtons right into his booklet. A very attractive book printed on golden hue paper. It contains a list of his seven pens, together with the price of eggs and stock. You will also find complete list of his winnings at the different shows.

J. W. Parks, Altoona, Pa., deserves a great amount of credit for the catalog just issued by him. It is from his own pen and is also designed by him. To go into full details would take a page, but suffice to give the main points. He gives you the history of his Bred-to-lay Barred Plymouth Rocks. He tells you all about the different poultry diseases and how he prevents them from coming among his flock. He gives you picture after picture of his farm and how he ships his goods, his birds, in fact nothing is omitted. You will find his prices of interest, and if you are at all interested in poultry it will pay you to get a copy of this catalog.

Another attractive catalog that came to my attention is issued by C. L. Patterson, Barberton, Ohio, breeder of Silver and Golden Campines. It tells you all about his pens, just how they are mated, by whom and his prices. A copy will be mailed you if you will write for same.

One of the neatest little catalogs we have come across so far is issued by Paul Wurtzel, Freeport, Ill. It is just a little different from anything that you or I have ever seen, in fact I doubt if anything just like it has ever been printed before. It tells the complete story of the Single Comb White Orpingtons and Partridge Plymouth Rocks, you will also find a double page showing his Partridge Plymouth Rocks in natural colors. Be sure to get a copy of this catalog.



When Luther J. Hall, Kenney, Ill., got out his new catalog he wasted a little white space, space that was wasted to good advantage for the type is not crowded and you can read at a glance just what he has to offer. It is beautifully illustrated throughout and it tells the story more completely than we could with a column of reading matter. Mr Hall has 17 pens, any one of

FINE CATALOG FREE

Twentieth Century Hatchery
DEPT. B, CHATFIELD, OHIO

which will prove of interest to you. His specialty is Barred Plymouth Rocks, and he has the goods.

The Roseland Poultry Farm, South Euclid, Ohio, has just issued a very attractive mating list, on Single Comb Buff Orpingtons. They have 20 pens mated with Cleveland, Detroit and Chicago Coliseum winners. Their No. 1 pen is headed by third cock at the Chicago Coliseum show.

A catalog and mating list combined, just a little different from the rest, is being sent out by the United Breeders of South Braintree, Mass. This is a large concern and is in a position to handle any size order, large or small. They breed the famous Harvard Single Comb and Rose Comb Reds. They have 18 Rose Comb pens mated, and 28 Single Comb, any one of which are bound to interest you, for they contain winners from the largest shows in the country.

F. A. Poertner, owner of the Buff Poultry Farm at Berea, Ohio, has just issued a new mating list on his Buff Orpingtons and Wyandottes. Mr. Poertner has had a very successful year in the show room, both in Orpingtons and Wyandottes, and these birds are found in his different pens. His prices are very reasonable and his stock of the very best.

E. W. Webb, proprietor of the Sunnyside Poultry Yards, Ewing, Ill., has without doubt as fine a lot of testimonials in his mating list as you have ever read. It shows that he is delivering the goods and delivering them properly, which is half the battle with all breeders. He has the Blue Wave Strain Barred Rocks, and he has captured some of the best awards in several of the best shows in the country.

If interested in the raising of chicks, the Duplex Colony Brooder Co., Rockford, Ill., has issued a very complete book which tells you just how to raise the greater percentage of chicks with the smallest amount of loss. It is a book gotten out to sell for 50c, but special arrangements have been made whereby a limited number will be sent out free if you will address them as follows: The Duplex Colony Brooder Co., Box 493, Rockford, Ill.

Arthur Trethaway, 45 Parrish street, Wilkes-Barre, Pa., has issued a very attractive mating list, telling you all about his high-class Anthracite S. C. Black Minorcas. This list tells about his different pens, gives you prices both on eggs and stock. Be sure to write for a copy.

Where Birkholz Reds Are Raised is the title of a mating list sent out by Ernst F. Birkholz, of Willoughby, Ohio. He makes a specialty of S. C. Rhode Island Reds and this booklet tells about his matings, winnings, prices and a long list of letters from satisfied customers. A copy of this booklet will be mailed on request.

They say whatever Mr. Flanders does he does right, and this is shown by the very attractive catalog which he has just issued telling you all about those famous prize winning White Leghorns which he has. Our readers have not forgotten the great winning made by the Flanders Farm at the recent big Chicago Coliseum show, nor will they forget for some time to come, for it was a wonderful record. Several of these birds are found among the 24 yards which Mr. Flanders has mated. Be sure to write for a copy of this catalog. Address Flanders Farms, Orchard Lake, Mich.

The consistent winners in all of the leading shows are Grave's Blue Ribbon Strain of White Rocks and White Orpingtons, and the past season has been no exception. They have just issued a mating and price list which is bound to prove of interest to you. Be sure to write for a copy of same. Address the Rockandotte Farm, Janesville, Wis.

When you think of Black Minorcas you are bound to think of Charles G. Pape, of Fort Wayne, Ind., for he is one of the oldest of this type of breeders. He has the birds and the prices, both of which will meet with your approval if you are interested in this type of fowl. His mating list is just off the press and he would be pleased to send you same, if you will drop him a card.

When it comes to issuing a catalog in a very attractive manner with a little individuality all its own, you have got to hand it to the Woolery Farm, Bloomington, Ind. This farm breeds Single Comb White Orpingtons exclusively and they breed them to win, as is shown by their catalog, a copy of which will be mailed you upon request.

Silver Campines and White Rocks

My birds are pedigree-bred for egg-production and have won at Quincy, Ill., Illinois State Show and Illinois State Fair, Springfield, Ill., and the great Chicago Show, 1912, 1913, 1914. My Campine pens are headed by sons of a winner at the 1912 Crystal Palace Show, England (the world's greatest show), and chicks six weeks old from these pens are showing excellent regular barring of the proper width, which proves that my pens are properly mated. EGGS scientifically packed (not boxed) to carry safely any distance and insure a good hatch, $5.00 per 15, $9.00 per 30, from Special Prize Matings of either breed, and $3.00 per 15, $5.00 per 30 from good bred-to-lay matings. Circular free.

13 Fourths 6 Fifths

Orders for stock and hatching eggs from these winners now being booked. Write today for free illustrated mating list.

SCHENLEY HEIGHTS POULTRY FARM
C. F. RANKIN, Prop.
1202 COMMONWEALTH BLDG. PITTSBURGH, PA.

F. E. Skinner, the White Wyandotte breeder of Sandwich, Ill., is sending out a mating list, price in which will astonish you when you stop to read the wonderful show record he made the past season. Mr. Skinner will be pleased to mail you a copy of this booklet upon request.

Charles H. Wood, Worcester, Mass., the originator of the Woodcrest strain of Partridge Wyandottes, mails us his catalog of 1914 showing 10 pens, each pen headed either by a Madison Square Garden or Boston winner. This is saying a whole lot, and birds from these pens should later on be found among the blue ribbon winners. A copy of this catalog will be mailed to you upon request.

For anyone interested in White Leghorns or Golden and Silver Campines it will pay them to get the two booklets issued by the Mound Hill Farms, located at Seville, Ohio. This farm is managed by S. D. Hall, a very capable man and one who is never satisfied until the customer is. Their stock is of the very best and their prices reasonable. Write for these booklets. Address Mound Hill Farms, S. D. Hall, Manager, Seville, Ohio.

In a recent booklet just issued, C. E. Riley, the noted R. C. Rhode Island Red breeder, gives a short history of his flock. He tells just how he started, what his plans were and how he has stuck to them. He also tells you about his mating pens and his great show record. A copy of this booklet will be mailed you free. Address C. E. Riley, 749 Fillmore St., Buffalo, N. Y.

If you are interested in Dark Cornish sit right down and write for the big illustrated catalog being issued by John W. Ward, Jr. It tells the complete story of these wonderful champion strain Cornish, and tells it in such a way as to hold your attention from first to last page. Address John W. Ward, Jr., Pennington, N. J.

Why They Are Good.

It is a matter of wonder to me where the Bruce Poultry and Stock Farm, Lynbrook, L. I., N. Y., find room to store all of their ribbons and cups. In the catalog issued by them they reproduce some of these, and if they were spread out through the catalog there would not be room to show the illustrations and tell you the story of their famous Buff, Black and White Orpingtons.

The White Orpingtons that this farm breeds are snow-white, and the result of cross-breeding the three greatest American strains known, i. e., Cook's, Sunswick's and Kellerstrass', the result of which is superb birds that for type and beauty cannot be surpassed. The same methods were used in the perfecting of their Black Orpingtons, these birds being the result of cross-breeding of such strains as Duke of Kent, Cook, Sunswick and Vass, while their Buffs are the result of cross-matings of Cooks, Sunswicks and Owen Farms.

This proves that this farm has the "strains." If you are interested in Orpingtons send for a copy of this catalog at once. Address Bruce Poultry and Stock Farm, Lynbrook, Long Island, New York.

An Attractive Booklet.

One of the very neatest and most attractive booklets which has come to our attention is being sent out by Miss H. E. Hooker, the Buff and Blue Orpington specialist, of South Hadley, Mass.

In issuing this beautiful catalog Miss Hooker did not spare expense; it is printed on a high-grade enameled paper with buff cover, contains a history of her birds, her pen matings and a list of her show winnings which takes three pages; it is beautifully illustrated with twelve half-tones. all in all it is a catalog that is bound to prove of value if you are interested in Buff or Blue Orpingtons.

While on the subject of Miss Hooker's birds we wish to call your attention to the winning made by her at the recent Madison Square Garden show. Showing Buff Orpingtons, she won 1st and 2nd hen, 3d pullet and 2nd pen, with Blue Orpingtons 2nd and 5th hen.

Write to Miss Hooker and tell her your wants. She can supply them, and also will mail you her catalog. Address Miss H. E. Hooker, South Hadley, Mass.

Since 1855.

The same strain of S. C. White Leghorns has been bred on the farm of that well-known breeder, D. W. Young, ever since 1855. It was at that time that the senior Mr. Young imported his first birds from Italy and from that day right on down to date they have been breeding and improv-

M. J. BERGSTROM - MENASHA, WISCONSIN

ing on these, the world's famous Young's Leghorns.

The show room record of these S. C. White Leghorns stands unequaled, and as layers their record is too well known to comment on. Proof of what Young's birds really are, is shown in the many advertisements you see in all poultry papers, just note the great number of people who advertise, "We have the Young strain."

If interested in S. C. White Leghorns it will pay you to buy the Young strain, for you can search the world over and not find any better. Write your wants. Address D. W. Young, Monroe, N. Y.

Cleveland's Buff Orpingtons.

One of the finest Orpington farms to be found in Illinois is located just 13 miles out of Chicago at Morgan Park. It is the home of Frank C. Cleveland's famous S. C. Buffs—Buffs that at the recent Coliseum show captured 1st hen, 1st old pen, special for best colored pen, special for best shaped S. C. Buff Orpington female, 2nd cockerel and 4th young pen. This makes the third straight year that Mr. Cleveland has won at the Coliseum.

Mr. Cleveland has just published a beautiful catalog which tells the history of his advent into the poultry industry, beautifully illustrated, telling you all about his pens and the record of each one that heads them. You will find upon reading his catalog that both egg and stock prices are very reasonable, so send and get a copy today. Address Frank C. Cleveland, 10802 Longwood Ave., Morgan Park, Ill.

A Page of Testimonials.

Something just a little different from anything you have ever seen is being sent out by the Reliance Incubator Co. It is a large folder telling you all about their incubator and brooder, and just why they are sold so cheap. But the big part of it is a big page of testimonials from satisfied customers all over the country. A copy of this folder will be mailed to you by addressing Reliance Incubator Co., Dept. A-3, Freeport, Ill.

How About Your Roof?

If you will take note of the new houses being built you will see that the days of the wooden shingle are over. More and more people are beginning to realize that both for wear and protection against fire there is nothing to equal the ready roofing.

Just watch the next fire in your neighborhood, watch the sparks fly on the roofs of the houses nearby, it keeps the firemen busy turning the hose on these wooden roofs where the sparks have fallen. But watch the houses that have the prepared ready roofing, the sparks fall on them and burn out, sparks have no effect on this kind of a roof. This is also true of rain, no matter how hard it rains, ready rofing does not leak nor does zero weather or boiling sun affect it in the least. To learn more about ready roofing, write to Barber Asphalt Paving Co., Philadelphia, Pa., and tell them you are interested in Genasco Roofing.

Selling Day-Old Chicks.

We all agree that the poultry business is assuming immense proportions. We are just beginning to realize the importance of the industry and are classing the business commercially, where it belongs. We must agree that a better class of men, business men, are engaging in the business. In years gone by it was supposed to be of sufficient importance for women and children, but not big enough for a full-grown man. We need only refer to statistics and look about us to get something of an appreciation of the immensity of the industry. We desire to call attention to an institution that has produced a book that is more than a catalog, for the purpose of instructing intending purchasers. We refer to the Michigan Poultry Farm's catalog for 1914. If you have not seen this catalog, write at once, addressing them at Lansing, Mich., and they will send you a copy free.

The Last Word.

In "profit-sharing" is what the Sunnyside Poultry Farms, of Bristol, Vt., advertise. They argue that the "almighty dollar" derived from the sale of eggs is much better than the show room record. Well there is a lot of room for thought there. Do not understand that they mean giving up the show room, but they claim a lot of people overlook the dollars from eggs in their rush for the show room.

This farm raises Barred, Buff and White Rocks, White, Brown and Buff Leghorns, Rhode Island Reds, Orpingtons and Wyan-

dottes, can sell you eggs, chicks or stock in any quantity from any of these breeds. Just tell them your wants, they will do the rest.

This farm made four entries at the late Boston show and captured three ribbons, this record with Buff Rocks. Be sure to write them for prices. Address Sunnyside Poultry Farm, Box 1002 Bristol, Vt.

Must Be Satisfied.

That is a good rule to go by, and no wonder the man who sticks to it is having such grand success.

J. D. Keyworth, owner of Elmwood Farms, Hudson, N. Y., has the above motto. Whenever he sells a customer eggs, baby chicks or stock he does not count the deal closed and the money his until the customer is perfectly satisfied in every way. With this rule it is easy to see why he is kept busy filling orders.

He breeds White and Buff Orpingtons of the very highest type, birds that have won at the best shows in the country. If you are interested in this type of birds write him your wants, for he has the goods and can and will satisfy you. Address J. D. Keyworth, Elmwood Farms, Hudson Falls, N. Y.

Sterling Poultry Farm.

When making a trip through Illinois do not fail to include Sterling in your list of towns. It is the home of the Sterling Strain Rhode Island Reds, both Single and Rose Comb. Just on the edge of the city is the big 35-acre Sterling Poultry Farm, where you will find about 1,000 fowls mated, in all about 36 pens. They have an incubator capacity of 6,000 eggs and brooder capacity for 2,200 chicks. The buildings are all of the open-front type, insuring strong, healthy birds. The Sterling strain Reds are bred-to-lay, and as winter layers are noted all over the country. Then when it comes to the show room, they have made records that any breeder can be proud of.

At Cedar Rapids, Iowa, 1914 show, they won 1st young pen, 3rd old pen, 5th hen and color and shape special on male and female R. B. Club of the World. At Illinois State show, Springfield, they won 1st cockerel, 1st young pen, 2nd old pen, 3rd hen and Champion Red male of show, also color special. At Champaign, 1914 show, which is the Central Illinois meet of S. C. Red Club, they won 3rd cockerel, 1st young pen, 5th hen, 3rd and 4th pullet, two color specials on female, two shape specials on male, Champion Red male, two cups and one cash prize. At the late Peoria show they won two firsts, one second, one fifth, one cup and one cash prize. You will find these different winners in their pens, and we advise you to write for their Spring Number Bulletin at once. Address Sterling Poultry Farm, Sterling, Ill.

White Diarrhoea Here Again.

That terrible plague has again put in its appearance and thousands of chicks are dying from it. In a very interesting leaflet the Duplex Colony Brooder Co., Box 500, Rockford, Ill., put up an interesting argument in which they claim that White Diarrhœa is not a disease, but a result. As usual they appeal to the law of common sense, and while their arguments are radical they really seem to have splendid grounds for their stand. They are worth looking into, especially since they claim their views are the result of successful experiments. They send this leaflet and their catalog of brooder stoves free. Write for a copy. You will feel repaid for both the catalog and leaflet are very interesting, and if their arguments are true it will save the breeders of this country thousands of dollars every year.

Pine Lodge.

Mr. W. H. Depper made a grand move when he entered into partnership with the Blue and Cuckoo Orpington originator, Mr. Art C. Gilbert, of England. Mr. Gilbert is conceded to be the greatest Orpington specialist in the world, and with his famous birds, together with the grand winners of Mr. Depper's, Pine Lodge Farm is without doubt the greatest Blue, Cuckoo and other Orpington yard that you will find. Be sure to write for their catalog and prices. Address Pine Lodge Farm, South Lincoln, Mass.

The Modern Cultivator.

Transportation in the last hundred years has witnessed no more decided advance in its methods than has agriculture beheld in the progress of its cultivating implements.

If one harks back to the days when stirring the ground with a stick was a forerunner of the present-day Planet Jr. two-row pivot-wheel riding cultivator, plow, furrower and ridger combined, he will observe the contrast and realize what the modern cultivator means in world-advancement. This splendid farm machine, the result of a practical farmer's ingenuity, completes the cultivation of two rows of corn, potatoes, and similar crops at one pasasge. It means that even the previous efficient cultivators which lessened labor amazingly are outclassed by this wonderful machine which cuts even their work in half. Moreover, such an implement works wonders in rows of irregular width, and in checkrows it is a surprise to everyone.

While this Planet Jr implement is the highest type of cultivator for extensive farming, there are cultivators of different kinds for every cultivating need down to even the smallest garden patch.

In fact sixty farm and garden tools of these modern types, covering the whole range of cultivating needs, are illustrated and described in a valuable 72-page book compiled by S. L. Allen & Co., Box 1107T, Philadelphia, which they will send free on request to anyone interested in the progress of cultivation.

advertiser in our journal. His birds have been heavy winners at many of the leading shows of the country and he guarantees that every bird he sells is bred and raised on his own farm.

He makes a specialty of Single Comb Buff Orpingtons and advises our readers that anyone who buys eggs, baby chicks or stock from him can rest assured that the deal is not closed until he has given them absolute satisfaction. Now Mr. Covert has the goods and he believes in a square deal, so write for his prices.

Electric Hand Lamp for Poultry Men.

A new electric hand lamp that is meeting with approval is called the electric light for poultrymen. The great advantage of the lamp is that it uses one ordinary dry battery. The pocket flashlights have been tried, but as they are only made for flashing, they are not suitable for service requiring heavier work. The one ordinary dry battery feature is a good one on account of this particular type of battery being universal for many different kinds of work, such as door bells, automobiles, etc. Thus every hardware, auto, supply and electrical dealer has a fresh supply at all times.

This hand lamp is designed for continuous burning, and can be used practically as an oil lantern, with the no danger of fire feature, as well as the convenience of turning it on and off in an instant with a twist of the thumb. Rain and wind cannot even flicker the light.

Several engaged in the poultry business have been using the lamp for candling eggs. By having a roll of white paper between the egg and the lens of the lamp they say the system has never been equalled. The lamp will burn in any position. The lamp is known as the DELTA ELECTRIC HAND LAMP, and is made by the DELTA ELECTRIC COMPANY, Marion, Ind.

New and Larger Quarters.

The necessity for larger space and better facilities to handle their increased business compelled the Indianapolis, Ind., and Louisville, Ky., branches of the H. W. Johns-Manville Co. to seek larger quarters. The new address of the Indianapolis branch is 408-410 North Capitol Avenue; that of the Louisville branch, 659-661 South Fourth Avenue. Both of these branches will include ample warehouse accommodations, in addition to show rooms for the display and sale of this firm's varied line of asbestos roofing, pipe coverings, insulating materials, lighting fixtures, automobile accessories, etc. In connection with the last named line, unusual pains have been taken in the equipment of service departments for the benefit of the customers who desire speedy adjustments, repairs or replacements.

Wonderful Partridge Rock and Bronze Turkey Record.

Bird Bros., the Partridge Rock and Bronze Turkey specialists of Meyersdale, Pa., are claiming the "Champion" Partridge Rocks and Bronze Turkeys of the country, and by the wonderful records they have made in the hottest competition in America's best shows during the past three years it is not likely that any other breeders will dispute their claim. This firm's record on their Rocks and Turkeys during the past few years is really nothing short of phenomenal, and their birds in the hands of their customers have been doing the same tricks.

Their two handsome catalogs which are now ready will give you their wonderful prize records in detail. All Partridge Rock and Bronze Turkey breeders who are chasing after the best will do well to write this reliable firm. They are offering some excellent egg propositions this season.

The X-Ray Iucubator.

One gallon of oil is the amount required to bring off a hatch with the X-Ray, the saving in oil being due to the central heating plant. This unique X-Ray principle is patented and is not found on any other incubator. The oil tank and lamp are placed underneath the egg chamber. As heat naturally rises, the X-Ray construction uses all that is produced, and in consequence it is not necessary for the lamp to make any waste heat. The heated air is conducted by the X-Ray tubes to the extreme corners of the egg chamber, and the proper temperature is evenly maintained. The X-Ray Automatic Trip regulates the flame to a nicety. It is asserted that the X-Ray principle commonly saves four gallons of oil to the hatch. Only one filling to the hatch is another point of merit that is exceedingly attractive. After the first filling it is not necessary to put in oil

again. Work and worry are thus dispensed with. The user of the X-Ray starts his hatch and then has practically no care until the next hatch.

The X-Ray book fully illustrates and describes the X-Ray Incubator and Brooder. It contains many facts on incubation that will be found interesting and valuable to any poultry raiser. Any of our readers may obtain a copy by addressing the X-Ray Incubator Company, Des Moines, Iowa.

A Fine Columbian Wyandotte Cockerel.

The recent winnings of the Wilburtha Poultry Farms, Trenton Junction, N. J., at the big Palace and Madison Square Garden shows again emphasize the remarkable quality of the fowls raised on this modern plant.

Their "Wilburtha Chief" Columbian Wyandotte cockerel was an unusual attraction at the Grand Central Palace show and was awarded first prize. While Columbian Wyandottes are their leaders, yet their Columbian Plymouth Rocks, their Partridge Plymouth Rocks and their S. C. Buff and White Leghorns have also won their share of the blue ribbons at the recent shows.

The Wilburtha Poultry Farms have just issued an attractive folder and their 1914 mating list, which will be mailed free to any reader of this paper.

Putting the Modern Roofing Industry on the Map.

Prepared roofing—the modern roofing—has come to stay. It is the natural result of the needs of modern business and modern building methods.

It represents one of the big factors in the "scientific management" of building.

Like every innovation—the first telephone, the first typewriter, the first automobile, the first airship—it bumped smash up against the gigantic wall of prejudice at the very start.

It was a real struggle—the same real struggle that every new industry undergoes before it gets under way. But this new industry had a real champion.

The General Roofing Manufacturing Company, with the tremendous momentum of its broadcast advertising, its aggressive sales policy, its gigantic volume of production, and with the three biggest mills in the roofing industry behind its guarantee—is chiefly responsible for this great and rapid success with which the prepared roll and shingle roofing industry has met.

The quality capable of making good on a fifteen-year guarantee established the faith of the public in the modern roofing industry and set it on its feet.

Now remember, readers, when you think of roofing, think of the name, Certain-teed.

White Diarrhoea.

Mr. Whiting has so persistently declared at the poultry shows and through the advertising of his remedy that he has positively discovered the secret of overcoming White Diarrhœa in chicks, and making whole flocks immune from it, that the larger breeders were finally influenced to give Whiting's White Diarrhœa Remedy a thorough trial.

That was all Mr. Whiting asked, the remedy has done the rest. It has proved itself so magnificently successful that its use is spreading to every part of the country.

"Revolutionizing the Poultry Industry."

Heat, moisture and air, when properly applied to fertilize eggs cause them to "hatch" into chickens. Hens "lay" the eggs, then "set" on them for three weeks and spend another week or two teaching the chicks to do the trick themselves. This was the old way.

When a hen's time became worth 2 to 4 cents a day, however, clever men took to using kerosene to get the heat to do the hatching. This made the present enormous poultry and egg business possible.

Now comes a little invention that seems destined to add another long step toward cheapening the hatching of eggs. This invention enables men to use the marvelous and mystifying power of electricity to hatch the eggs. The hen did a small retail business—expensive. The kerosene made it a wholesale business—much cheaper. Electricity now cuts labor, expense, eliminates chance and produces better results.

Whenever there is an electrically charged wire it is now possible to hatch chickens with a fraction of the labor necessary to run an oil lamp incubator.

The "Lo-Glo" Electric Incubator is the "new hope" of the poultry business, made of steel, can't burn; requiring only the pushing of a button to start. The device

AUTOMATIC SANITARY TRAP NEST

THE BEST IS THE CHEAPEST

"Best that has come out." Poultry Herald.
"Thoroughly Automatic—nothing to get out of order." American Poultryman.
"Practical, sanitary and sensible." Southern Cal. Poultry Breeders Ass'n.
"There are none compared with it." Judge J. B. Greenfield.
"Works splendidly—tells what each is doing." Rev. D. Earl Rhoads, Ada, Ohio.
"Hens take to it readily—it is splendid." Robert Achurch, Charleston, S. C.
"It has come to stay." Iowa Farmer.

Metallic, vermin proof, durable. Accurately selects layers from non-layers. Has made the 300 egg hen possible. **All hail the Trapnested Hen.** No. C 521, Oregon Station, a trapnested hen bred from trapnested stock just completed 304 eggs in twelve months. Best booklet out—Free. Address:

Automatic Sanitary Trap Nest Co., - Duluth, Minn.

that regulates the flow of heat into the eggs, works automatically and with such precision that when once set a variation of a fraction of a degree either way, up or down, will start or stop a flow of heat till it reaches the exact desired temperature. It does not have to be watched or even touched, once it is started.

The Value of a Dependable Thermometer.

Catching trains with a watch that's sometimes just as slow as the day before it was fast is not a bit less satisfactory than having a thermometer hanging around that goes up or down at its own free will, and without any regard whatsoever for actual temperature conditions.

Guessing at temperature is costly, and a dependable thermometer really costs no more than an instrument made to look pretty and sell profitably. The trade mark "A. E. M." on any one of more than a hundred thermometers for more than a hundred different purposes, is a guarantee of thorough testing, absolute accuracy and practical lasting usefulness, because A. E. Moeller, Brooklyn, N. Y., is one of the largest, oldest, most reliable thermometer houses in the country.

Incubator Most Important Factor in Poultry Success.

After all is said and done, the fact remains that the first and biggest problem in successful poultry culture is getting profitable percentage hatches. In this connection, Mr. J. W. Myers, president of the Reliable Incubator & Brooder Company, of Quincy, Ill., had a few words to say the other day. "There has not been a time," said Mr. Myers, "when the question of the incubator was as important as it is today. Eggs cost money. There can be no disputing that fact, and yet we often see poultry raisers, even men who have had years of experience in the business, putting costly eggs into incubators of such inferior quality that the results are not even uncertain—it's a foregone conclusion that hundreds of fertile eggs will be wasted that might easily have been hatched and produced a good profit.

"I wish that I could impress upon every poultry raiser the fact that they cannot afford to take a chance with their hatching. I believe that the manufacturers themselves are largely to blame. The stress of competition has led sometimes to the manufacture of machines which, because of materials or construction, cannot be other than a loss and disappointment to the user. In the manufacture of Reliable incubators and brooders we have realized that for a poultry raiser to make money, we must give him the best that can be produced. And when one buys a Reliable he buys a real chick maker, not just an 'incubator.' Our thousands of satisfied customers are proof positive of this."

For thirty years the Reliable Incubator & Brooder Company have been known the world over for the quality of their production. Their new catalog will be sent to any of our readers who will send their name and address on a post card.

More Than 1,000 Bales Behind in Their Orders.

The only trouble the O. K. Company ever experiences with O. K. POULTRY LITTER is the difficulty of keeping up their stock. No matter how much they ship, or how greatly they increase their orders, the demand keeps ever on the increase.

As "Mr. Postum" says, "There's a Reason." No other material in any particular equals O. K. LITTER as a litter for all sorts of poultry or in brooders. And no matter how cheaply you can buy even straw, you will find, when figuring everything up, that O. K. Litter lasts so long, saves so much trouble and labor, and is so valuable after it's finished as a litter, that there's no comparison between the cost.

Red W. Farm.

One of the neatest mating lists reaching our desk is being sent out by the Red W Farm, of Wolcott, N. Y. Illustrated throughout with pictures of their birds, also views of their big farm, it also gives a list of their latest winnings, including New York State show, Greater Buffalo and Rochester shows.

This farm makes a specialty of Rose and Single Comb Reds, Princess strain. Their prices are very reasonable, and it will pay you to write them. The owners are Wadsworth & Caster, address Wolcott, N. Y.

Single and Rose Comb Rhode Island Reds.

Mr. Harold Tompkins, Concord, Mass., has proven himself a persistent and loyal "Red Man," and the chip of a worthy old block, a family who has done so much for the Reds in particular and better poultry in general. For years we have seen him exhibiting his stock at our best and greatest shows, and at each we have seen him win the honors and recognition that have been a credit to his line and his succesful work, all of which he well deserves.

In Single Combs we note by the records that he has won since 1911 at Boston, Mass.; Portland, Me.; Manchester, N. H.; Brockton, New London and other prominent exhibits. At Boston, 1913, 1st pen, 5th cock and 5th hen, with shape special, etc. At Boston, 1914, 1st pen young, 1st pen old, 4th cock, 5th hen, 3rd pullet. Both his winning pens were greatly admired for their evenness and superb high quality. We handled these birds and appreciate such rare quality.

For this season Mr. Tompkins has mated eight matings headed by his famous males, a description of which with their mates is given fully in his mating list, which all interested breeders should have. Here are the 1st pen cockerel at Boston, 1913, a superb bird, remarkable in type and color and a noted breeder of quality.

The 1st pen cockerel at Boston this year (1914) heads another glorious pen of females; all are winners and all of desired quality, a very even and choice lot that should breed some of the best. His other matings of Single Combs are just as carefully made and with evenness and sound color the feature.

In the Rose Combs Mr. Tompkins has also been most successful in exhibiting at the great shows. At Boston, 1913, he won 1st prize cock and shape and color male specials, gold special for best Red male and $100 silver cup for best male in the show.

At New Haven, Conn., December, 1913, the R. I. Red Club annual meeting show, and in a class of 123 Rose Combs, he won cock 4-5, hen 3-4-7, cockerels 1-2-3-7, pullet 1-7 and pen 3, special for best display, sweepstake champion medal for best male in the entire show and all shape and color specials on males and females.

At the great Madison Square Garden, New York, show, 1913-14, cockerel 3, pen 3. At Boston, 1914, cockerel 3, old pen 1, young pen 4. This is a line of winning up to date made at National shows that stand for quality of the best.

In Rose Combs for this season he has but six matings, all of which are of a very high order in evenness and superior quality. Again we say send for his mating list, it is free to all for the asking. Mr. Tompkins still has for sale some choice stock which he offers at most liberal prices and after May 15 will sell a share of this year's breeders at special sales prices. Write him your wants and mention A. P. J., please.—H. P. Schwab.

Are You Making Money?

Think of the thousands and thousands of breeders who still throw food for poultry on the ground or floor, to feed the birds and rats, and some to be wasted in other ways, when they might have the protected, sanitary, loss-proof metal feeders made by Atsatt Bros.

Then think of the ill-flavored eggs, of the small eggs, that come partly through foul water holders, when sanitary, easily-filled fountains such as Atsatt Bros. make, are so inexpensive, and so thoroughly practical. Think of how many chicks are lost directly and because of weakened conditions through the use of dirty, improperly made lamps, when Atsatt Bros. offer the "Zero" Safety Incubator and Brooder Lamp, that has no equal. Those who are making money in the poultry business are amply provided with such utensils, but there are still plenty who jog on without ever figuring up whether they are making money.

How to Kill Lice.

This is a problem that confronts every poultry raiser. It is almost impossible to rid the chickens entirely of lice with powder unless same is applied every two or three weeks, and besides it is a great deal of trouble to apply the powder. There is a new product on the market which is very easily applied, will rid the birds from lice with one application, and is by far the cheapest article on the market for this purpose. This new product is Licene, a scientific compound with strong lice exterminating and antiseptic properties. It is very easily applied, and two applications a year will positively keep your hens free from lice. The price is 50 cents. Address Licene Co., 1500 Pontiac Bldg., Chicago.

S. C. WHITE LEGHORNS

Winners: 1st Cockerel, 1st and 2nd Pullet and 1st Pen at the great State National S. C. White Leghorn Club Meet held at Elgin, Ill., January, 1914. 300 of the noble variety in competition. The hottest class ever held in the state. Send for descriptive catalogue to

Black and Buff Orpingtons.

Mr. L. O. Kettering, of the Sandy Lick Poultry Farm, entered a pen of his S. C. Black Orpingtons at the late M. S. Garden, New York, show, the females arriving all right, but the male did not appear in his pen during the show, but was returned with the rest of his birds and in good condition. This was a beautiful pen of birds, and all concerned regret that they could not compete, for no one to this day knows where the male was during the show.

Mr. M. F. Delano, who judged the Blacks at New York and later saw this pen complete, stated that if they had all been there, they surely would have won third prize pen or better at the late M. S. Garden, New York, show.

We think it but just to state this case as it is and for the benefit of Mr. Kettering and all interested, for we have seen a letter from Mr. Cleveland to the above effect. Mr. Kettering only wishes to be put right in this matter. He has a grand line of birds, as his late winnings at Pittsburg and other shows will prove. His address is 966 Liberty avenue, Pittsburgh, Pa.—H. P. Schwab.

CARMAN'S WHITE WYANDOTTES
I have four of the grandest pens I ever mated for my egg trade. Eggs from pen 1 and 2, $5.00 per 15, pen 3 and 4, $3.00 per 15. A few good cockerels left from $2.00 up. Order direct from this ad. Satisfaction guaranteed. O. A. CARMAN, Petersburg, Ill.

He Satisfies.

Of the many catalogs that we have received one of the most attractive ones is being issued by H. W. Halbach, the White Rock breeder of Waterford, Wis.

Mr. Halbach is the owner of "Riverdale Farm" and is known the country over as the poultryman who satisfies.

This catalog covers thirty-two pages, each and every one of which is brim full of valuable information, with special articles on the care of breeders and the raising of chicks. Illustrated with a number of halftones, showing these famous White Rocks; also a number of pictures of the farm and a two-page spread showing the "old man" and his helpers, the powers that be that have made the Halbach strain of White Rocks famous. These birds were exhibited at the leading shows the past season and in every case came out with flying colors. It is these ribbon winners that head the many pens they have mated, so you cannot go wrong in buying eggs from the Riverdale Farm. This beautiful catalog will be mailed to your address upon receipt of twenty cents. Address H. W. Halbach, Riverdale Farm, Waterford, Wis.

A Great Record.

In the show season just ended A. & E. Tarbox, of Yorkville, Ill., came in for their share of ribbons. Showing their Silver Wyandottes at the club meet in Baltimore they won 1st, 2nd, 3rd and 5th hen, 5th cock, 5th cockerel, 4th and 5th pullet, 1st pen, president's cup for best cock, cockerel, hen and pullet, silver cup and pitcher for best display, special for best shaped female also for best colored female, besides 19 other specials. At February, 1914, St. Paul show they won 1st, 3rd and 4th cock, 1st and 3rd cockerel, 1st and 2nd hen, 1st and 2nd pullet, 1st pen, also one special and two cups. At the same show with Silver Campines they won 2nd cockerel, 3rd and 4th hen and 1st, 2nd and 3d pullet. At Aurora show their Campines won 1st, 2nd and 4th cockerel, 1st hen, 1st and 5th pullet, 1st pen and cup for best display.

These winners, with others, will be found in their mating pens, so send for their list. Address A. & E. Tarbox, Yorkville, Ill.

White Diarrhoea.

One of the many remedies on the market for the cure of White Diarrhœa is put up by the Nabob Remedy Co., Box A, Gambier, Ohio. These people must have the goods, for they advertise that they will refund the purchaser his money if after trying the entire order he is not completely satisfied.

"Oculum" Relieves Roup.

The testimonial below is from a big breeder who had hundreds of birds with roup in serious form:

"I have cured 135 hens with 'Oculum' and have 70 more under treatment that are doing nicely. The bunch I inoculated that I was finding 8 or 10 cases in daily I haven't found any for a couple of days. And I trust my troubles are waning. I was getting 20 eggs per day when I inoculated the first time three weeks ago—and got 300 today (March 6).

"D. B. McNeil.
"Cunningham, W. Va."

Any man who wants to get eggs and keep down disease will make no mistake in using "Oculum." Tests like the above tell the truth. See ad in this issue.

Henry Pfile of Freeport, Illinois, is sending out a very neat catalogue telling about his farm and stock. Mr. Pfile has about 1,500 chickens, 500 ducks and 200 geese. At the late show held in Freeport he entered 75 birds, capturing 54 firsts, 14 seconds, 4 thirds and 3 fourths. These are described in his catalogue, a copy of which will be mailed on request.

A new round feeder for little chicks that affords protected feeding space for a great number at one time, and one that cannot be upset, has been invented by Mr. A. B. Moe of Chicago. This is a great feed saver, as the little chicks cannot get into the feed and waste or contaminate it. It is not a novelty but a useful and inexpensive article that will appeal to every breeder and last a lifetime.

This article has been added to the Moe's Line of Useful Poultry Supplies and is fully described together with a great number of other good things for the poultry raiser in the new No. 4 catalogue just issued by the Otis & Moe Manufacturing Company, Otis Building, Chicago. Write for one today.

Best in the South.

That is what you hear whenever anyone speaks of the White Plymouth Rocks owned by W. J. Brinkley, of Iuka, Miss.

Beyond a shadow of a doubt Mr. Brinkley has a flock of beautiful birds, and

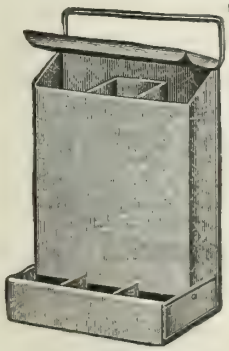
Keep More Healthy Birds

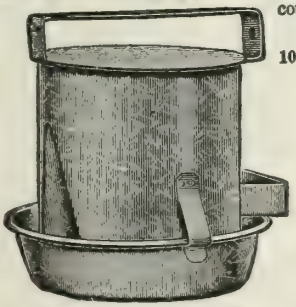
Make Less Work—More Profits

If you believe that healthy birds in your poultry yard make wealth in your bank book—insist upon having Kentuco Ware. You can raise *more* birds—keep them *healthier*—and save money on feed with



KENTUCO Poultry Ware

We have experimented repeatedly to get these results for you. For example, study the Kentuco Grit or Food Box illustrated here. We made and discarded no less than 15 different styles before this style was accepted. Now, we know of no other feed box in the world that can equal its service. Food or grit cannot clog in the reservoir—it cannot be wasted or polluted in the tray—you cannot pull box apart. Kentuco Fountains are galvanized *after* they are made. That's why they are *entirely* rust-proof.

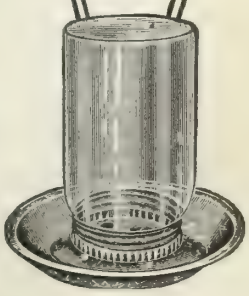


Ask your dealer for Kentuco articles. Their prices are no higher than those asked for most poultry ware, yet benefits of service are incomparable.

Write us for the big folder which tells the real facts about poultry ware. Also ask for the Kentuco Jar Fountain—free. In writing please mention your county as well as your city and state.

Kentucky Stamping Co.
104 N. 15th St. Louisville, Ky.

Kentuco Grit or Food Box
Prevents birds from wasting feed—there is always feed in the tray.



Kentuco Sanitary Wall Fountain
Can be taken apart and cleaned with a brush. No other fountain in the world like it.

Kentuco Two Piece Fountain
Absolutely rust-proof. Cone top keeps birds from perching on it and polluting water in the tray.

This Fountain Given Away

Kentuco Jar Fountain
If you will pay the postage and packing, we will send you the metal base for this handy jar fountain *free.* This is just to let you know more about the Kentuco Poultry Ware. Send ten cents in stamps.

wherever shown they are sure to capture blue ribbons, as is proven by his wonderful record the past year. At every large show in the South these birds captured more than the lion's share of ribbons, making an exceptionally grand record both at Little Rock and Memphis.

We doubt if there is a finer and better equipped poultry plant in the South than Mr. Brinkley's. It covers acre after acre, allowing the birds free range, while all through it is studded with beautiful pine trees, allowing ample shade. His breeding pens and houses are the very best; in fact, the plant is strictly modern in every way, and a visit there will afford you a great amount of pleasure, besides teaching you just why these birds are called the "best in the South." If you are interested in this type of fowl you owe it to yourself to get their prices, for they have the goods, and Mr. Brinkley's manager, J. H. Sledd, would rather tell you about these wonderful birds than eat. Address W. J. Brinkley, Iuka, Miss.

———o———

A Fortune in Poultry

Given a stub pencil and a scrap of wrapping paper, he is a poor financier who cannot make a fortune from poultry in ten minutes of uninterrupted figuring. It's so easy—on paper! Thousands have done it, and have come back to earth with a dull thud when they attempted to make their figures come true.

Few who have not been "through the mill" realize what a large amount of technical knowledge is required in order to make a success with poultry. The great "secret of success" with poultry is knowledge of the principles of poultry husbandry—not gold dollars or broad acres. Poultry raising can be successfully conducted on the back end of a city lot, a living can be made from poultry on a few acres of ground, and very little capital is required to start—if you know how! Too many people waste valuable years in costly "experimenting" instead of profiting by the knowledge and experience of specialists who have made a life-study of the poultrymen's problems.

Poultry raising, properly conducted, is one of the most fascinating, healthful, profitable and useful of occupations. To the lover of nature it offers a marvelous opportunity to study her laws, and in the proper use of them, to bring into the world new creations of beauty and symmetry. To the tired business or professional man it offers a pleasant and healthful, as well as profitable, recreation from the more strenuous duties of life. To the clerk and the office man who feel old age creeping on, to the woman who finds herself suddenly bereft of her former means of support—to all who have heard the "call of the hen," it offers a dignified means of livelihood. Success is sure to come to the person who prepares for success by a thorough mastery of the foundation principles upon which the industry is builded.

The sure way to success is offered through the American School of Poultry Husbandry, located at Mountain Grove, Mo. The fact that T. E. Quisenberry is president of this school is proof positive that you will learn just what to do and how to do it. Write for their catalog.

———o———

Tywacana Quality

Thirty-two miles from New York City—out at Farmingdale, Long Island—there is located one of the most ideally situated poultry farms in this country. Nestling among the picturesque hills and oak trees, the Tywacana Farms combine superior natural advantages of soil and elevation with quick and convenient access to the greatest market and shipping point in the country for farm and poultry products.

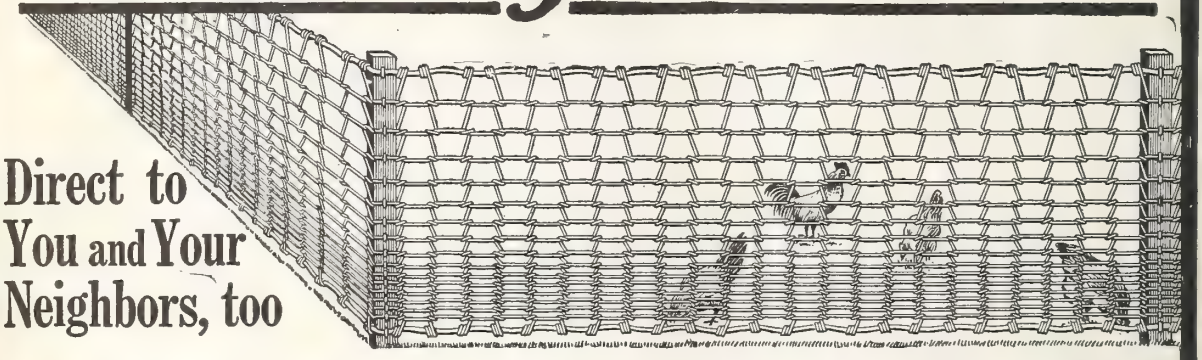
The poultry plant at Tywacana Farms covers an area of 250 acres, ample room for raising husky, vigorous fowls. This place is run on a high standard of efficiency—there are no elaborate frills but everything is kept spick and span. The same high ideals are held in regard to

The Best S. C. White Leghorns in America

The Best S. C. White Leghorns in America, will, we honestly believe, be hatched from our matings this season. If you could see the marvelous quality in all our pens, you would say so too. We entered in 23 classes in four shows this season and won 1st in 20 classes and 2nd in the other three.

We have won more firsts, specials and other awards in the past four years at the Grand Central Palace, New York, Boston, Hagerstown and Philadelphia than all our competitors combined.

At the last **Palace, New York, show,** in what everyone conceded to be the strongest and best class of Leghorns ever exhibited in this country (don't take our word for this—look up the comments in any poultry paper), we won the display prize by over **1,000 points more than our nearest competitor, besides Best Pullet and display in the whole Show.** Our stock has not only won for us—it has won for our customers in most every part of this country and Canada.



Hatching Eggs 60c each from first 10 pens, everyone headed by a champion male; 35c each from pens 11 to 20, each headed by a prize-winner; 20c each or $15 per 100 from good pens headed by cracker-jack males. Send for catalog and mating list. Mention A.P.J.

KITSELMAN BROTHERS, 295 So. Council St. MUNCIE, INDIANA.

the quality of the S. C. White Leghorns, Barred and White Plymouth Rocks—the breeds with which this plant specializes. All breeding stock has been carefully selected and even more carefully bred to produce a strain of heavy layers that are also high in "Standard of Perfection" qualities.

Any reader who desires to improve the blood of his or her flock of Leghorns or Rocks will make no mistake by writing to the Tywacana Farms Poultry Co., Farmingdale, Long Island, for their big new catalog.

U. R. FISHEL, HOPE, IND.

"Fishelton," the Largest Specialty Poultry Farm in the World, Devoted to White Plymouth Rocks.

Written by H. P. Schwab, Irondequoit, N. Y.

When stepping from the train at Hope, Ind., we murmured "At last" to ourselves, for a wish and a desire of many years was at last to be granted. For years we had heard of, thought of and as time passed had more and more desires to call upon Mr. U. R. Fishel at his home and to see his place and stock and when the opportunity came in February after our work was completed at the Indianapolis show we were quick to accept the invitations extended graciously by both Mr. and Mrs. U. R. Fishel, and within a few days thereafter took train for Hope.

We well remember the first time we met Mr. Fishel and his birds, years ago at the great New York State Fair, where he won all honors and his exhibits of forty White Rocks were the sensation of the entire exhibit of 5,000 birds. It was his first trip east and he captured it easily at one attempt and made a lasting impression, winning unfading fame thereby. We also remember his exhibit at Chicago years ago when he came with thirty-two cockerels entered that were beyond the reach of the other exhibitors and in itself formed a class of wondrous beauty and value; they were the class in type, of the best color and condition and very similar in type and style and from that day on one of our fondest hopes and desires has been to visit the home of Mr. Fishel and to see his whole line just as they are under their natural home conditions.

Mr. Fishel has a beautiful home but a mile from town; its surroundings are naturally beautiful. It is a homelike home—so grand, still so simple that it is magnificent. The mantle of snow that covered the earth could not hide from our imagination the beauties to be seen here at seasons when nature is at its best. The trees, shrubs and garden were having their annual rest, to blossom out soon in all their glory. It is an ideal fancier's home within and without, the result of Mr. Fishel's successful labors for him to enjoy. We hope to again visit Mr. Fishel some day and under better conditions, for the day was a bitterly cold one.

On leaving the house we had a general view of this mammoth plant—as far as the eye could reach coops and houses were in sight; to the left the shipping house, a large building with ample room filled with coops, where the birds are brought for comparison and selection; back of it the conditioning houses and wash room, and to the rear of them the brooder house and incubator cellar with its giant machine of 10,000 egg capacity and many small machines besides.

The packing room, where eggs are kept and where they are packed for shipping, is a model in convenience. It has to be to properly handle the thousands of egg orders shipped from these farms yearly.

From here the breeding houses and parks extend farther to the left, way over to the right and in front, covering 130 acres of land. For breeding, small coops, generally known as colony houses, are used. We also like this plan best. They are well suited to a pen of birds, are warmer than the large houses and afford larger and better runs. Here these houses are set in parks of fruit trees and each park contains about a half acre of land, with grass and shade from the trees. This method is ideal and is worth the extra cost for it insures health and vigor and insures fertility.

Although the day was bitterly cold it was delightful to see the birds in these houses, working away, singing and in the best of condition. It is the best recommendation we know of for small, select matings, small houses and large parks for them to roam over.

Here on this great plant we saw White Rocks in quality and quantity. We dare say there were over 5,000 White Rocks there at the time of our visit, and a royal fine lot they were. Here we saw Mr. Fishel's late winners at Cincinnati, Ohio, Show, where he won cock's 1st, 4th and 5th; hen's 1st, 2d, 3d, 4th and 5th; cockerel's 1st, 2d, 3d and 4th; pullet's 1st, 2d, 4th and 5th; old pen's 1st, 2d and 3d; young pen 1st, 2d and 3d; grand sweepstake silver cup and $50 gold for best display any variety; silver cup for best display in the American class; cup for best display White Rocks; cup for best two birds in each class; cup for best cock, hen, cockerel, pullet and pen, and five other championship cups. A win without a parallel in the history of standard-bred poultry.

This is but one of the records Mr. Fishel has made. He has been making them for years. At Hagerstown, Md., the great early show two years ago he made a similar record. This is one of the strongest shows in the country. We know for we have worked there and realize it takes the best to win. Mr. Fishel won all the first prizes and a big majority of all the other awards, several cups, championship medal for best cock in the entire show and for best pullet in the entire show.

The same kind of records, winning all leading prizes, were also made at the Indiana State Fair, the Illinois State Fair, Tenessee State Fair, the Great Louisiana Purchase Exposition, St. Louis World's Fair, the largest poultry exhibit ever held, and at other large and prominent shows east and west, completing a line of winnings that surely places this line up with the greatest winners of today and of the past. It is a record that has taken years and years to make and one that will stand for years as absolute

proof of the quality of Fishel's White Rocks.

Here we went from house to house, along a well beaten path, to see all of Mr. Fishel's matings and to study them, and found in the very first house entered that, which a general inspection later proved true, Mr. Fishel mates quality to quality. The very best male in shape and color to the best of females in like quality; good heads on male and females and good eyes and proper style and carriage. This is the kind of breeding that insures quality and success alike and carries with it extreme breeding value in all birds so produced.

We can't begin to describe the individual males or females seen here for space won't permit, and if it did it would be the same story over and over again. The males, both cocks and cockerels, were a husky lot, of grand size, heavy bone, and they stand well with legs well set. The nice long bodies with the sweeping backs were a feature gladly noted; tails broad and full, carried low, and very fine heads with combs in proportion. The general outline of the males was surprising in evenness—they were all alike. In making our rounds Mr. Fishel pointed out several of his noted winners and their sires, also the sires of winners sold, and the complete history of some of these birds would alone fill a book. It was a line of males good to see, one we highly appreciate for they well meet the highest quality standard demands.

The females were a charming lot taken all in all, and well deserve our highest comment for they, too, have the splendid long bodies so desirable, well carried and the best of color, and they, too, are superior in size and of heavy bone, grand nice heads crown them and they have the appearance of highest practical quality combined with best standard qualifications. It was a grand good line all through, well worth our time and effort to see.

Mr. Fishel has been breeding since boyhood. His fancy has always been poultry in general and White Rocks in particular. He has grown up with them and to him a great share of credit is due for the very prominent position occupied by the White Rocks today.

Mrs. U. R. Fishel is also a fancier and next to her family fancies White Runner Ducks, of which she has a great flock and many selected pens for breeding. While we do not claim to be an expert on ducks, we do know that for general evenness, size, carriage and style these looked very fine to us.

Master U. R. Fishel is a breeder of White Cochin Bantams and made a great killing at the late Indianapolis show, while Mr. Edward B. Fishel, Mr. Fishel's oldest son, follows in the steps of his father and is his best man. He is rounding into a poultryman of promise with great opportunities and a great future before him.

We were glad to have had the opportunity to visit this plant. It has done us good. We went and saw, yes, far more than we expected, more than anyone can expect or dare imagine, a wonderful plant and a wonderful line of birds that is a glowing illustration of what the standard-bred poultry industry has come to be—a factor of national importance.

—o—

J. C. FISHEL & SON, HOPE, IND.

"Fisheldotte," a Great Plant Covering 60 Acres, Devoted Exclusively to White Wyandottes.

Written by H. P. Schwab, Irondequoit, N. Y.

"Fisheldotte," the home of J. C. Fishel & Son, breeders of their famous line of White Wyandottes, is located but a mile from Fishelton, and we were quickly landed there for our interest in these White Wyandottes was heavy as we had traveled very many miles to see them.

Mr. J. C. Fishel is one of the pioneer breeders, whose name, reputation and record are pretty well known to the general public and fanciers alike, for he has been exhibiting since 1879 and breeding for—well, to tell that would be giving his age, and a good, true fancier never grows old; they are always so many years young. They breed, bloom and thrive as the seasons pass, and each succeeding one finds them with renewed strength, hopes and full of ambition to do greater things for the universal benefit. Today the name of J. C. Fishel connected with White Wyandottes is just as popular as that of his brother, U. R. Fishel, with White Rocks, and their earnest work for all these years is most deserving.

While we regret that we haven't at this time a complete record of the winnings of this line, we find in our records enough to at least give the reader an idea of Mr. Fishel's winnings of the past and an estimate of this line's value and quality. Remember that White Wyandottes are one of the three most popular varieties and are among the leaders in numbers and quality at all shows and the exhibitor has fierce competition to contend with, which certainly adds increased value to any and all awards won. We find that some of Mr. Fishel's most prominent and best winnings were made at Atlanta, Ga., in 1912, where he won four first prizes of a possible five, as follows: 2d cock, 1st hen, 1st and 4th cockerel, 1st and 3d pullet, 1st pen and best display and specials. At Indianapolis, Ind., New Orleans, La., Indiana State Fair, Illinois State Fair, American Poultry Breeders' and Fanciers' Show, Columbus, Tennessee State Show, Cincinnati, Ohio, San Antonio, Tex., Chicago, Ill., St. Louis World's Fair and at other exhibits almost without number this line as shown by Mr. Fishel has been consistent winner and has made and held a reputation for great winning records and highest quality. It is a record of glorious results and of worthy and successful efforts.

The lay of this farm and plant of sixty acres is ideal, sloping gradually to the south and a general view can be had from the road of the lay of the plant. Here, also, the favorite breeding houses are the open front colony coops, with large parks supplied with shade and a grassy run, and here, also, we found the entire plant in shipshape condition and a busy place indeed. It is just the kind of a

HOW TO SAVE THE LITTLE CHICKS

Ordinary feed is not the proper food for baby chicks. Their delicate digestive organs require a special food properly balanced to meet the entire needs of their little bodies. Feed during the first 10 days after hatching

"F. P. C. CHICK MANNA"

and watch 'em thrive and ward off epidemic attacks—especially bowel troubles. Starts them off in life healthy with strong, vigorous constitutions. **Introduced in 1884—the original** and best food for baby chicks, turkeys and pheasants. Ask your dealer for it. Accept no imitations.

Special Parcel Post Offer.—Write for Free Circulars and our special offer to send "F. P. C. Chick Manna" by Parcel Post. A 5 pound package feeds 75 chicks first week.

F. P. CASSEL & SON, Originators and Sole Manufacturers, No. A3 LANSDALE, PA.

ATSATT Is The MAN Who PUTS PROFIT into Poultry Raising IF YOU WANT IT, READ THIS NOW

After the practical poultry owner has cooked hundreds of chicks in the shell, and got tired of low hatches because of faulty, smoky, bound-to-run-up lamps, he pitches them all out and uses nothing but the

"Zero" Safety Incubator and Brooder Lamp

IT'S SAFE, because the oil cannot get heated; **Clean** because it never smokes; **Reliable** because it cannot run up and the temperature must remain uniform. Notice the double jacket. All metal. Fits any incubator or brooder. At dealers, $1.00, or mailed on receipt of 15c extra.

Atsatt's Sanitary Chick Fountain can't wet or drown chicks. Easily cleansed and filled, holds a quart and fits any brooder. Heavy galvanized iron. 25c at stores, or mailed for 8c extra.

Atsatt's Chick Feeder absolutely **stops waste.** Lots of room for chicks to get their food, but they can't get into it, stand on top of it, or scratch food out. Top removes instantly for filling and cleansing and springs back into place. Best galvanized iron; so can be used for **wet or dry feed or water.** 10x4 inches—just right size for brooder. 25c at dealers; mailed on receipt of 8c extra.

Write us to-day for **Free Book** with Illustrations and prices

Some breeders make more money than others because they've had the foresight to see that it pays to have Feed-Saving, Time-Saving and Money-Saving Equipment such as Atsatt Makes.

ATSATT BROS., 27 Pearl St., Mattapoisett, Mass.

One lamp, fountain and feeder mailed to one address at one time $1.70, so that you can see how fine they look.

S. C. White Leghorn Baby Chicks

We Have No Other Breed

By concentrating all our efforts in improving the qualities of our breed of fowls, we are in a position to offer you chicks from breeders possessing unsurpassed utility combined with exhibition qualities ,and at prices asked by others for the ordinary strain. Our advance during the past season in perfecting the OLD RELIABLE SPRING WATER STRAIN has been marvelous.

We have among our breeders both male and female birds that have won first prize as singles and pens at some of the leading Eastern Shows.

We guarantee chicks hatched from eggs laid by our breeders only and their safe delivery to you.

Join our army of satisfied customers. You must be satisfied before we consider a transaction closed.

Order early, thereby assisting delivery on desired dates.

Eggs for Hatching. 90% fertility guaranteed.

We also offer choice breeding cockerels at tempting prices. Mammoth Incubators. Capacity 20,000 Eggs at one sitting. Write for free illustrated booklet.

SPRING WATER POULTRY FARM

Frank J. Eppele, Prop. Stockton, New Jersey

place we would expect to find as the plant of a practical life-long fancier or breeder whose greatest interest is in the comfort and quality of his birds.

The cockerel house seen here is a most desirable and practical building. It has a double row of small pens of about 4 x 6 feet, where males are kept and conditioned; the same with females. It can also be used for several other purposes as the occasion may require.

We were very much pleased with the White Wyandottes seen here. The males show the best of character and have line features easily noted in their general style and carriage and also in their head points. Combs are small, even and of dandy shape with good spikes. They are very similar and this surely denotes breeding of rarest and best sort. We were particularly impressed with the shape and style of the males. They are large, deep and full bodied fellows, strong and of grand bone with excellent finish. Backs very good, with heavy, full tails nicely spread and carried. They stand well centered for the full, broad breasts are nicely rounded, giving them a massive appearance viewed from any position, we consider them a beauty lot from which the best of results can be expected. The color was very sound and extra good on old and young alike.

The females conform to the same characteristics as the males do and have everything to commend them in form, style and color. The same massive bodies well carried, nice full and spread tails and trim heads, all uniform and in proportion.

Their matings as made surely promise much and when we consider the years this line has been bred for highest quality, and that these close to ideal qualities have been strongly and firmly bred into this line so long, we can then better comprehend its value as a line. It is a worthy one well deserving the success it has attained.

We consider the J. C. Fishel & Son catalogue one of particular value to the breeders of White Wyandottes; it contains much to interest and much of value to the breeders in general.

Largest Barred Plymouth Rocks.

By Rev. I. A. Engle.

The makers of the American Standard of Perfection are the poultry breeders throughout the country who have succeeded in breeding their respective birds to such a degree of perfection that the men who write the Standard on the various breeders are enabled to find, in the yards of these breeders, birds which have approached, in the largest possible degree, the ideals which make up the Standard. It is only an occasional breeder, too, who possesses a thorough knowledge of his birds, the expert skill to mate and breed them and the keen insight to future Standard requirements in such a degree that he can be and is one of the few breeders in whose yards are found these rare and choice specimens which serve as the guides of the various writers of the Standard. The Hall View Poultry Farm, Kenney, Illinois, has become the home of a few such rare specimens of Barred Plymouth Rocks and the proprietor of this splendid farm, Luther J. Hall, has become a master breeder of this favored variety.

The writer of this article recently enjoyed the privilege of visiting the Hall View Farm, becoming personally acquainted with Mr. Hall and handling and scoring a number of his choice birds. If his many customers could meet him, as I have, and be let into the "inside" of his great love for his Barred Rocks, his masterful skill in mating and breeding them, and, above all, into his frank, open and honorable methods of doing business, they would be assured that their orders would be safe with such a man and that each egg they get from him is a chance for some champion winner at some big show.

You can appreciate what Mr. Hall means by his "Largest" Barred Rocks only when you see the gigantic size of his birds, to which is added symmetry, shape and beauty. The white on his birds is white, the black is black, and he has succeeded in separating these two colors almost as distinctly as if they were on two different birds. The shading of one into the other he has largely eliminated, each stopping square against the other, the bars being narrow and running straight across the feathers.

Chicago Queen on this farm is one of the best pullets I have ever handled. Her shape is almost perfection, the curve in her neck, her fine head points, her long broad back and the perfect barring, espe-

THE WINNERS

in the Shows of 1914-1915

WILL COME OUT OF

ARISTOCRAT MATINGS

Last season, show after show, in the East, in the West, in the North, in the South, in Canada, in Europe and in other foreign countries, reported Aristocrats (hatched out of Aristocrat matings) as **Winners**—among them some of the very largest poultry shows of the world.

Prince Narrowbars as a cockerel, showing that extremely narrow, cleancut barring for which the Aristocrats are noted. He has now developed into a very full-bodied, magnificent cockbird.

The best birds of my matings of last season are again in my matings this season, together with the cream out of the thousands of birds they themselves produced. The quality coming from them will be some of the richest ever produced **anywhere by any breeder at any time**—even better than they themselves produced last year. As is well known throughout the U. S., the Aristocrats are classed as the most narrow barred and richest colored strain of Barred Rocks in existence. Five years ago I challenged the world through the poultry journals to show up another male bird so finely barred as my Prince Ringy, and no one, not a single breeder, took up the challenge. Since that time the Aristocrats have kept in the lead, always improving, always gaining year by year, leaving the others to follow. Such a dazzling wealth of fine, narrow barring, such deep, rich, lustrous, sparkling, scintillating color from head to fluff as you can find right now in my matings has surely never been equaled, nor would you think it possible if you did not see the living birds right before you.

F. W. Hallett, in the February issue of the Inland Poultry Journal, writes as follows: "The Aristocrats have won at National shows from Coast to Coast in the hands of customers and under different noted Barred Rock judges in every section of the country. This is not a record of one year, nor is it past history. It is a record they are making every season, and one has only to visit this great plant (Holter's Roost) and see for himself—see some of the grandest, snappy, ringy, clean-cut birds with actually the narrowest barring that can be found anywhere. It is no uncommon thing to pluck saddle-feathers from the finished male-birds and count from seventy to eighty clean-cut, straight and regular bars to each feather. Where can such narrow barring be found outside of these narrow-barred families?"

It is from such birds that I am selling eggs for hatching at the following prices:

$10.00 per Setting of 15 eggs
$17.50 for 30 eggs
$25.00 for 50 eggs
$50.00 for 100 eggs

AND NOW LISTEN:

I positively send out eggs to my customers from each and **every** female I own. Read this once more. I want you to know this—to remember it. I reserve no birds, no matings, for my own private use. **I send out eggs from every female I own.** Here is a frank and true statement of fact. My customers get, without reserve, eggs from the very same birds from which I produce those sensational specimens. Do you understand this clearly? Is this what you want? Birds that produced a King Ringy V., a Prince Narrowbars, a Prince Crystal I.—such birds are in my matings today. King Ringy V. himself, Prince Narrowbars himself, Prince Crystal I. himself, are right now in my matings, and my customers get fresh, fertile eggs from their pens. Order today, direct from this ad. Eight fertile eggs guaranteed to each setting.

W. D. HOLTERMAN, Fancier Box A FORT WAYNE, INDIANA

P. S.—Now—today—is the day to order. May hatched chickens, well grown, make the grandest show-birds of all.

cially across her back and tail, are almost dreams of a master artist and they are the dreams of her master breeder. It would have been an injustice to his customers for Mr. Hall to have accepted the $500 offered for her.

A postal card will bring a beautiful illustrated catalogue from this farm, showing a portrait of the breeder, specimens of the product of her skill and the homes in which many choice winners are bred and raised. And when you read this catalogue remember that the writer of the Barred Rock division of the Standard of Perfection has visited this farm several times and the Standard of 1915 will embody some new features that have been worked out and bred into the birds on the Hall View Farm only.

MOE'S NEVER FAIL TRAP NEST

DELICATE TRIGGER HOLDING TRAP RELEASED BY HENS ENTRANCE FALLING SILENTLY

(Patent Pending)

A solution of all trap nest troubles—for, as the name implies, it never fails.

Lice-proof, fully sealed back and sides, but affording plenty of air when the hen is trapped. Can be placed anywhere in the poultry house. The trap is easily removed, so that the nest can be used as an ordinary one. Set up and ready for use when shipped.

No. 33, 12x12x12 inches, complete 75c
No. 34, 12x12x14½ inches, complete $1

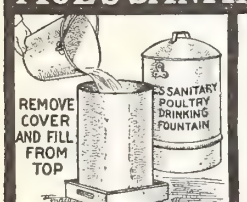
TRIGGER LOCKS TRAP AND HEN THEN THERE TO STAY UNTIL RELEASED

MOE'S SELF LOCKING LEG BAND

MOE'S SELF LOCKING BAND READY TO BE USED

(Patented)

You simply push it together to lock it and it can only be removed by destroying the band. A sealed band that requires no sealer.



Every band has its own raised or embossed number.

12 Bands, any size 15c
Liberal Discount on Quantities

EASILY ADJUSTED WITH THE FINGERS AND IT IS THEN ON TO STAY

MOE'S SANITARY POULTRY DRINKING FOUNTAIN

(Patent)

The most popular fountain on the market. Fills from the top.

Dead air space keeps water cool in summer and from freezing in winter. Drinking pan now made square, which does away with spilling when hung up. Can be used for two pens at the same time. Prevents chickens from getting their wattles wet and freezing in the cold weather. Manufactured in three sizes:

No. 1, 1-gallon capacity - $1.25
No. 2, 2-gallon capacity - $1.75
No. 4, 4-gallon capacity - $2.25

REPLACE COVER AND YOU HAVE A CONTINUOUS SUPPLY OF PURE WATER

Also specially constructed for ducks and pigeons.

These Are a Few of the Good Things in MOE'S LINE.

Write for complete catalog. If not at your dealer's, write us mentioning dealer's name and we will see that your wants are filled at above prices, your city.

OTIS & MOE, 2011 Otis Bldg., CHICAGO, U. S. A.

Sunlight Poultry Farm, Lynchburg, Ohio.

I had the pleasure of visiting the Sun light Poultry Farm last summer and I was more than pleased with my trip, as this plant is one of the best plants I have visited in my travels. They had about 500 pullets grown out on range. The houses were set around in different locations and each house had about 75 pullets. They were a beauticul sight, all good healthy birds. The brooder house had about 1,200 younger chicks in it and they were the healthiest lot of little chicks I have ever seen together. It was a rare sight to see these chicks run back and forth in their runs.

This farm has increased its hatching capacity from 3,000 to 5,400. This will place them in a position to take care of the large orders for little chicks. This farm added a lot of D. W. Young's strain of cockerels to its breeding pens this spring, which should breed some exceptionally good stock for the coming season. I take great pleasure in recommending the Sunlight Poultry Farm for good healthy stock and a nicely equipped plant.—L. S. Farquhar, Cincinnati, Ohio.

———o———

Trinidad, Colo., March 9, 1914.

Editor American Poultry Journal.

Dear Sir:—In some of the recent issues of the poultry magazines we read a considerable amount of argument regarding the producer of good breeds of poultry and the would-be producer or the purchaser of the good breeds, as it very often happens that the inexperienced purchaser will get the cart before the horse in his correspondence with an honest breeder, regarding some trivial matter about eggs or stock that has been shipped, sometimes causing his correspondence to be ignored, by using such language that the breeder loses all interest in his particular case or complaint, whereas if he had put his complaint before the breeder in a manner that would allow no doubt as to his or their honest intentions I venture that he would receive an immediate adjustment of said complaint.

Being in a position to observe and hear of complaints of this nature and having had some experience along this line, where the breeder was in no way at fault or responsible for my troubles, I thought it might be well for me to let some of the intending purchasers hear of the consideration and fair treatment I received at the hands of one of the largest breeders of White Wyandottes in this country, J. C. Fishel & Son, of Hope, Ind.

In the spring of 1912 I sent to Mr. Fishel for a pen of his birds, which were duly received and every one of exceptionally good shape and in the very best of condition, but through an accident shortly afterward I lost one of the best pullets in the pen. After using this pen that season I wrote Mr. Fishel regarding the cock bird and asking for advice, which was cheerfully given, and now at the beginning of this year 1914 I wrote him complaining of poor success, probably from inexperience at the start, but he promptly responded by offering to replace the original bird with a good line bred cockerel after two years had elapsed since the original purchase.

After further correspondence he "went me one better" by allowing me to retain the original bird and he forwarded the cockerel with the understanding that I was to remit him a nominal sum for the second bird shipped, providing he proved satisfactory. Now I consider this extraordinarily fair treatment, but I believe that along this line of fair business dealings has helped to produce the wonderful strain of "The World's Best White Wyandottes," and any one considering the purchase of the breed or stock will do well to write Mr. Fishel of his or her wants, for I can assure them of the very best treatment and good service. Wishing you and your magazine success, I remain,

Leo B. Glahn.

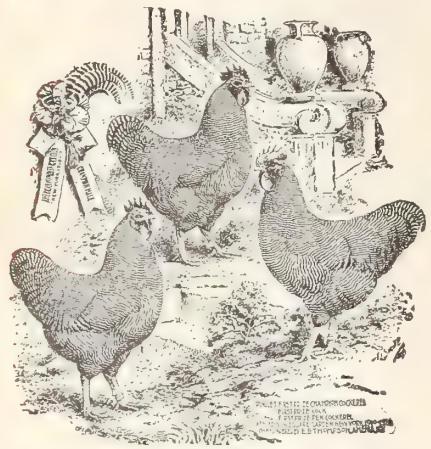
E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.



The Imperial prize of the show, Sweepstakes Special for Champion Male.

Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. See my ad. on page 667 for my remarkable record of one year ago at New York. These great twin records, two years in succession, spell **Imperial "Ringlet" Supremacy.**

GRAND BIRDS FOR SALE

EGGS from the finest exhibition matings in the world $10 per setting; four settings, $35; 100 eggs $60.

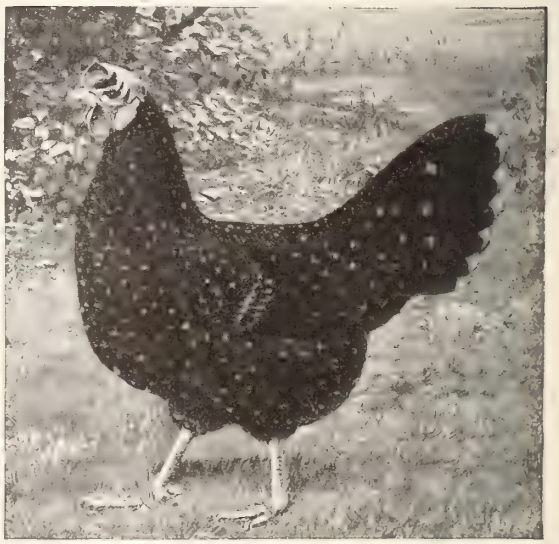
Sheppard's Anconas For Profit!

Poultrymen are of one opinion when it comes to the question of Poultry Profits. Almost without exception they will tell you **"the profit is in the eggs!"**

—and SHEPPARD'S famous "ANCONAS" have challenged the world for egg production.

G. W. Idle writes, "Pullets hatched from eggs purchased from you have laid an average of **256 eggs each** for entire flock for year."



"Going some"—but ANCONAS have the wonderful trapnested record of 270.

Don't that sound like **profits** to you?

They are beautiful fowls from a fancier's standpoint, and as a utility fowl the "ANCONAS" cannot be equalled.

You are in the Poultry business for all the **profit** there is in it, and no matter how you look at it, the "ANCONAS" lead.

They are hardy, prolific, not inclined to set, are the **greatest layers the world has known,** and they always present a clean, well groomed appearance.

Don't you think it would be a good idea to raise the most profitable fowls on the market?

ANCONA Pullets lay as early as 4½ months—they lay large white eggs —they require **less food, less floor space,** and are busy laying, when the heavy fowl is setting.

Wouldn't it be a good idea to have complete information on this profit making strain? Tear out the corner and mail it quick for your copy of my catalog and mating list.

H. Cecil Sheppard, Berea, Ohio.

I would like complete information on Sheppard's famous "ANCONAS" —the "World's Best."

Very truly,

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich.

F. E. HARRISON'S ARISTOCRATIC ROYAL RED S. C. R. I. REDS

Are the acknowledged champions by virtue of a show record unequalled by any competitor.

In the last two Chicago Coliseum Shows, 1912-13 and 1913-14 (note the dates), Royal Reds won nine out of a possible twelve firsts , competing with seventy-four competitors, none of which won more than one first.

In addition to this, in these two great shows, Royal Reds won five seconds, four thirds, three fourths, and two fifths, and three times as many color specials, shape specials and championships as all other competitors combined, and best display at both shows. Think this over.

Catalogue free for the asking.

POTTER & CO., Box E-21, Downers Grove, Ill.

Capacities, 1,200 to 20,100 Eggs

As a moneymaker for the poultryman, the Hall Mammoth Incubator has had no equal since 1876. It is the original.

The principle is right. Each year its leadership is more evident.

The absolute simplicity of operation, the freedom from complications, the superior methods of making and selling, the guarantee that means satisfaction, the unusually big hatches of vigorous, lively chicks, all help place it in a class of its own.

Each improvement has been made for the poultryman's profit and not for its value as a sales argument or talking point. The "Hall Service" policy is rare in the whole business world.

If you are not using the Hall Coal-Heated Colony Brooder you are not getting the results you are entitled to. Ask for "Broadside B"

Ask to be placed on our mailing list.

Two Headliners in the Poultry World

Tecktonius-Reed Strains

R. C. S. C. BUFF LEGHORNS S. C. RHODE ISLAND REDS

Now Under Same Management

The fame of "Tecktonius" Buffs—America's Champion exhibition and laying fowl—is world wide. Big exhibition prizes, everywhere, at their mercy—not once, but for 7 consecutive years. Their laying record, as well, is as long and brilliant, with 249½ average in 1912 Nat'l Laying Contest—one bird, 281 high. "Tecktonius" Buffs build "winning" reputations, and make "big money" for poultrymen. Put your trust in them and be a "winner" as a poultryman.

Take note of **Reed's S. C. R. I. Reds**—the coming champions of 'Reddom'. This **unrivaled strain of Reds** is the outcome of 7 years efforts of B. C. Reed—one of the most—if not the most—scientific and successful breeding and mating expert this country has ever known. Mr. Tecktonius, recognizing Mr. Reed's extraordinary breeding ability, and the almost **perfect strain of Reds he has** evolved, has enlisted Mr. Reed's co-operation, and henceforth, these 2 breeding geniuses will work hand in hand for the advancement of these two grand strains.

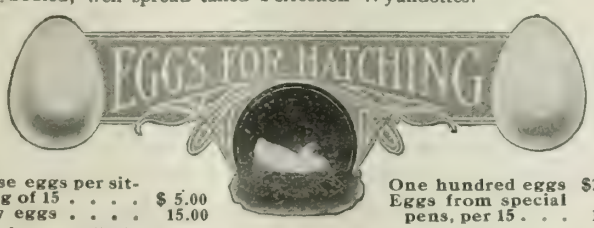
Some Unrivaled Tecktonius Strain Bargains

S. C. Matings--Pens 1 to 6 inclusive, one 15-egg setting, $10; two, $18, three, $25.
Random Selection--If selected from one pen, in which price rules, $5 per setting, extra Pens 7 to 10 inclusive, one setting, $5; two, $9; four, $15. Pens 11 to 14, inclusive, $2 per setting; $10 for one hundred.
R. C. Matings--Pens 15 and 16, one setting, $15; two, $25.
S. C. Utility Stock--Hens, $2; Cockerels, $3 and $5; trios and pens, $10 and $15.
Exhibition Stock--Hens, $5; Cockerels, $15 and $25; trios and pens, $25 to $50.

No Chicks of Either Variety For Sale. Mating List Free.

Special Introductory Offer—Reed's Strain S. C. R. I. Reds

We have mated 6 pens of these Royal Bred birds--the cream of 565--comprising 2 Cocks, 4 Cockerels, 20 Hens and 40 Pullets Everyone is a marvel of breeding, with exquisite, rich even Red Color, and with absolutely no contrast between hackle, back and sickle feathers The tail and wing markings are as near perfection, as scientific breeding can make them. Both male and female types come up to standard requirements, and well over standard in breeding weight. From all pens above described, we will sell eggs as follows: One 15 egg setting, $5; two, $9; four, $15; per one hundred, $25.



No Stock For Sale Until Fall. No Chicks For Sale.

TECKTONIUS & REED BUFF & RED FARM Route 8 Racine, Wisconsin

Eggs half price after May 1st. The best birds I ever raised were June hatched. Chicks will mature in time for the winter shows.

Rudy's Perfection Strain
White Wyandottes

These eggs per sitting of 15 . . . . $ 5.00
Fifty eggs 15.00
One hundred eggs $25.00
Eggs from special pens, per 15 . . . 10.00

All of my exhibition stock is hatched from these 20 pens. I replace all infertile eggs returned to me before 14 days. Write for mating list.

GEO. H. RUDY Route 15 Mattoon, Illinois

The American Poultry Journal

The Book You Need **Year Book for 1914** **The Book You Want**

408 pages, eight colored illustrations of pure bred poultry, suitable for framing.

In compiling this book, nothing has been overlooked which would interest the poultryman, and any one of the various articles in this book may be well worth the price of the entire volume.

An article on **A New Method of Judging Chickens by Comparison,** by Louis A. Stahmer, is the first to appear in this book.

The Poultryman's Calendar. Telling what to do each month in the poultry yard, together with almanac of the different months and a breeder's table, will prove valuable to the breeder during hatching time.

The Poultryman's Encyclopedia will be found very useful for the amateur. It is alphabetically arranged and the various terms and common diseases are described and explained in such a way so as to be readily understood. In fact, this encyclopedia alone is worth the price of the book.

The Remarkable Growth of the Poultry Industry, by J. F. Schureman, is very interesting to every poultryman.

Barred Plymouth Rocks, by H. P. Schwab. Explaining the standard requirements of this breed, single mating, double mating, also describing correct mating of cockerel line-bred as well as pullet line-bred birds, shape and color, underbarring, breeding value, also future prospects of the variety.

Anatomy of the Fowl, by Dr. S. A. McWilliams. An illustrated article describing the internal organs of the fowl in an interesting manner, and will be found exceedingly instructive from a practical standpoint.

Organization of Boys' and Girls' Poultry Clubs, by Harry M. Lamon. Describes the ways and means employed in interesting the younger generation in promulgating the interest which is being shown in poultry at the present time. This article tells the methods of organization of clubs, suggestions for constitution and by-laws, how these clubs are run, the prizes that are awarded to the young poultrymen, etc. It is an article well written and instructive.

Efficiency in Poultry Husbandry, by Dr. Prince T. Woods. Tells the amateur exactly how to proceed in order to produce the desired results. The maximum of accomplishments with the minimum of labor. Amateurs will do well to pay special heed to this article.

Frozen Poultry vs. Fresh Killed, by Helen T. Woods. Is an article worth reading by those who are dependent on the market for poultry which is bought for consumption.

The Utility Poultry Farm, by H. H. Stoddard. Explains the care and management of such a farm. This article will prove valuable to those who are dependent on poultry for a living.

Cancer in Fowls and Its Prevention, by Harvey R. Garlord, M. D. This article with its many uncanny illustrations is by far the best ever written on this subject. It describes the development of this malignant disease, how it may be recognized, etc.

Blue Orpingtons, by Max DeBathe; **Houdans,** by Dr. H. E. Dunne; **Cornish for Utility Purposes,** by John W. Ward, Jr., treat on their respective varieties.

Ideal Breed Types as Seen by America's Foremost Fanciers and Judges, by L. A. Stahmer. Illustrates the ideal type of Plymouth Rocks, Orpingtons and Leghorns. Drawings being made after having been criticised by the foremost breeders of these three popular varieties.

Laying House for 100 Hens, by Prof. J. C. Graham. Tells how to construct such a house by the aid of a diagram. Also the exact specification and cost of same.

Houses for Convergent Yards, by H. H. Stoddard. Showing by aid of a diagram how to construct houses and lay out yards in order to save time in caring for the birds. This article will prove very valuable to those who consider time a valuable factor.

White Diarrhœa and Fowl Cholera, by Dr. B. F. Kaupp. Explains the symptoms of these treacherous diseases, treatment of sick birds, how to perform an autopsy, etc.

Fattening Poultry, by Alfred R. Lee. Gives sound information on how to fatten poultry for market.

Poultry Feeding and Foods, by Prof. M. E. Jaffa. Explains the compositions of foods, digestibility of foods, fuel value of different nutrients, nutritive value, how to compound rations, formulas, feeding of chicks, feeding of laying hens, feeding of breeding stock and comments on various foods, including the table showing the composition and digestibility of poultry foods. This article should prove exceedingly interesting to every poultryman, both amateur and professional.

The Single Testing System of Breeding for Egg Production, by Prof. D. F. Laurie. Explains the selection of the birds in the founding of a strain in order to breed for egg production.

The Iowa Colony House, by Profs. J. B. Davison and Wm. A. Lippincott. Explains the construction of this colony house, the necessary material, cost of same, etc., complete with drawings.

Following these interesting articles come the reports of the egg-laying contests, being as follows:

The Second National Egg-Laying Contest, by T. E. Quisenberry.

The Second International Egg-Laying Contest, by W. F. Kirkpatrick.

The Inter Ocean-Midlothian Farms Egg-Laying Contest, by John G. Poorman.

Egg-Laying Competitions at the Roseworthy and Kybybolite Government Stations, by D. F. Laurie.

Egg-Laying Competitions at the Hawkesbury Agricultural College, by D. S. Thompson.

Poultry Laying Competitions Held at Harper Adams Agricultural College, Newport, Salop, England.

Following these complete reports of the egg-laying contests are the show reports of seventeen leading poultry shows in the United States, giving complete report of such shows and the first, second and third prize winners in every class.

Following these reports are the reports of fifty other shows having from 1,000 to 2,000 entries and giving the first prize winners at these shows.

Following these is a complete list of poultry shows held during the season of 1913 and 1914, arranged alphabetically by states and towns. A poultry judges' directory follows this, giving names, addresses and length of service of the different judges.

A poultry journal directory giving names and addresses and condensed description of the different poultry papers published in the United States as well as foreign English poultry papers follows this.

Directory of experiment stations, a specialty club directory and a directory of English specialty clubs follow in order. This directory gives condensed information regarding these various clubs, etc.

A short writeup on the American Poultry Association, its officers and financial statement follow these directories.

The above is a condensed description of contents of the Great American Poultry Journal Year Book for 1914, a 408 page poultry book, which is up-to-date in the minutest detail.

Price of this indespensable work is 50c paper bound, $1.00 cloth bound. The book is printed on high grade enamel book paper and the binding is linen thread sewed to make it flat opening. No expense has been spared to make this book attractive in every way and no book of this size has ever before been offered to the American public at these prices.

The proof of the pudding lies in eating. We can't describe how good this book really is. The best way to describe it is to let you look at it and examine it yourself and for this reason every copy is sent out with the distinct understanding that if you are not entirely satisfied with your purchase, return it to us, and we will refund your money at once.

Remember, the price of this big poultry book is only 50c, paper bound; $1.00 cloth bound. Send your order today.

We believe there is a market among Progressive Poultrymen for a reasonable priced automobile of merit!

That's why we are advertising the CROW ELK-HART in the American Poultry Journal.

The successful poultryman is usually a man who has trained himself in economy. He must have efficiency in all things which concern him; and wants this efficiency at its most reasonable cost.

For just this reason we feel that the CROW ELK-HART will appeal to poultrymen in general who are considering the purchase of a motor car.

The CROW ELK-HART is a thoroughbred motor car from every point of view; and has demonstrated its good qualities under the most exacting conditions. This car has had its place in the great National shows and has won its share of comment and reputation just as your blooded birds have won their laurels.

The CROW ELK-HART is a car of which any poultryman may be proud, for it tallies with those high ideals for which he continually strives in his work.

CROW MOTOR CAR CO., ELKHART, INDIANA

Who Are

the people interested in this new move in the Thoroughbred Poultry Industry? And **why** this change from the old methods? The men interested felt as individuals they had done all they could do to promote the thoroughbred poultry business, but, as a United Farm we can give the business more publicity, produce more fowls and better ones at less cost.

The United Poultry Farms

INCORPORATED

consists of only such farms as have made a success in the business, starting without a dollar, and by proper business methods and the ability to produce the best in their line, are conceded leaders.

Wm. Cook & Son, Scotch Plains, N. J.
Originators of all Orpingtons
What more can we say to all Orpington breeders than this.

U. R. Fishel, Hope, Ind.
whose **White Plymouth Rocks** have been the leaders for years, and whose farm of 120 acres devoted to the one variety has proven what can be done with poultry.

Buschmann-Pierce Red Farms, Carmel, Ind.
by far one of the most successful **Rhode Island Red** farms in the world, under the direct supervision of Judge W. C. Pierce.

J. C. Fishel & Son, Hope, Ind.
the noted **"World's Best" White Wyandottes,** for years the home of more good White Wyandottes than could be found on any one farm.

C. E. Spaugh, Rugby, Ind.
for twenty years breeder of **Barred Rocks of Quality Unsurpassed.**

POULTRY FEEDS
such as we have used for years will be for the first time offered for sale. These feeds will be manufactured in our own mill and will be a great help to the raisers of poultry.

These farms and owners are well known to every man, woman and child interested in thoroughbred poultry. They have, as individuals, made it possible to have the great poultry plants the United Poultry Farms, Inc., now own, and by their united efforts they have planned to do even greater things for the upbuilding of this great growing industry. Write us. Box A.

Fifty Dollars in Cash Prizes

Great Prize Contest for 1914 Chick Growers Open to Everybody— Starts Now—Enter Your Name Today

American Poultry Journal offers Ten Cash Prizes, aggregating Fifty Dollars, in a Great Chick Growing Contest for 1914. The contest is open to Everybody who grows chickens. There is no entry fee. If you wish to compete simply send in your name today to the Managing Editor of American Poultry Journal, Silver Lake, Mass., saying: "I wish to enter the A. P. J. Chick Growing Contest for 1914." Read carefully the rules of the contest.

$50 IN TEN CASH PRIZES

FIRST PRIZE	$15.00
SECOND PRIZE	10.00
THIRD PRIZE	7.00
FOURTH PRIZE	5.00
FIFTH PRIZE	3.00
SIXTH PRIZE	2.00
SEVENTH PRIZE	2.00
EIGHTH PRIZE	2.00
NINTH PRIZE	2.00
TENTH PRIZE	2.00

Rules of Chick Growing Contest

The contest starts now; chick season of 1914. It is open to anyone who grows chickens this season, any variety of Standard-bred poultry.

Every contestant must write the story of his or her chick growing experience for the season of 1914, describing hatching, brooding, feeding, care and management of the chicks. This article should contain not less than 1,000 words nor more than 1,500 words.

With each article there must also be furnished FIVE PHOTOGRAPHS of the growing chicks at ages mentioned below. The photographic prints should be clear, sharp and distinct and should not be mounted. The photographs must be made of chicks grown by the contestant and all five for the same variety of poultry. With each photograph must be given the average weight of individual chicks at time photograph was taken. Only chicks of the same age must be included in the same photo. Arrangement and grouping of chicks is left entirely to contestant. The photos should be taken of chicks at different ages as follows:

Photo No. 1. Day-old chicks.
Photo No. 2. Chicks two weeks old.
Photo No. 3. Chicks four weeks old.
Photo No. 4. Chicks eight weeks old.
Photo No. 5. Chicks three months old.

Remember to write your name and address in pencil on the back of each photo print, the name of the variety, the age of the chicks in photo and the average weight per chick. These rules must be carefully followed. Do not write on the face of photograph.

The contest will close September 1, 1914, and all photos and articles must be in the hands of the Managing Editor of American Poultry Journal, Lock Box 4, Silver Lake, Mass., not later than September 15th.

All photos and articles submitted become the property of American Poultry Journal. The judges reserve the right to reject any or all articles and photos not deemed worthy of a place.

Prizes will be awarded ON PRACTICAL MERIT of the chick growing method reported, the RESULTS WITH THE CHICKS, and the QUALITY OF THE PHOTOGRAPHS, including EFFECTIVE GROUPING OF CHICKS.

We require that all articles be written on one side of the paper only and neatly prepared. Literary style will "cut no ice." The PRACTICAL VALUE of your story as an EXPERIENCE LESSON is what counts. Don't be afraid to enter because you have never written an article for publication. Simply tell your experience just as you would write a letter about it to a friend whom you wanted to help to be successful with chickens. Tell your story plainly, forcefully, briefly and stop when you are done. Prepare for writing the article by making notes of your experience as you grow the chicks this season.

Don't fail to enter this contest; it will help you, help your variety and help others who are beginning with poultry.

Awards will be announced as early as possible after the close of the contest and the Cash Prizes will be paid in time to furnish you with Christmas money. Winning articles will be published. Be sure to read the rules carefully and to save them for reference. Enter the contest today. Do it now.

ABERNETHY'S HOUDANS MAKE NEW RECORDS
AT BOSTON'S GREATEST SHOW, JANUARY, 1914

In the greatest class ever shown and with 159 birds competing, my birds won Hen 1st, Pen 1st and Specials, showing in three classes only. This great class was the sensation of the show. I have also won at Philadelphia, Madison Square Garden and New York City.

Reduced Prices on Eggs. Eggs from all pens, as they run, will be sold at $2.50 per setting after May 15.

RAISE EVERY CHICK on "HEN-E-TA"-"HEN-O-LA" The *Phosphatic*-System!

The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.

The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.

Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*

Prove It Now, This Month, For Yourself

READER, don't you think you ought to take our advice JUST ONCE—in the matter of feeding your chicks? When we tell you that we have spent fifteen years in finding out the BEST WAY to feed young chicks, that we have built four poultry food mills, each one larger and better-equipped than its predecessor—when we explain the BIG AND VITAL FACT that on our $75,000 fifty-acre all-purpose, poultry plant we have TESTED AND PROVED every food we make, every feeding method we recommend, don't you really feel that you should DO YOURSELF THE JUSTICE in your poultry work this SPRING AND SUMMER, to at least give the "Cyphers Company way" a trial?

THOUSANDS, in fact TENS OF THOUSANDS of poultrymen and women HAVE DONE SO—and now they would not follow ANY OTHER PLAN, would not willingly use ANY OTHER BRAND of poultry foods. Now and then they are unable to get the Cyphers sealed-bag, balanced-ration foods promptly enough from some local agent, and therefore are forced to use something else for a few days or a week or two—in which case they SOON DISCOVER the bad effects of inferior, hit-or-miss, GUESS-WORK MIXTURES and they lose no time in getting back to "the real thing." Please read the sample reports herewith and judge for yourself

Cyphers Portable Hover

Set it down Anywhere Indoors and you will have a Safe and Comfortable Place for the Little Chicks. "Movable" at a moment's Notice without even turning down the Lamp Flame. Weighs 35 lbs. in use. Price, Complete, Safely Boxed, $8.50 free on cars at all our Places of Business, except Oakland and London. Oakland F. O. B. price, $9.50. Entirely safe to order a sample from this advertisement. Weighs 40 lbs. by express. Send today for our 244-page Free Catalogue.

RECENT REPORTS FROM CUSTOMERS

"And Like Them Very Much"

Prescott, Wis., April 10, 1914.
Cyphers Incubator Co., Buffalo, N. Y.—

I have used your sealed-bag brand poultry foods ***and like them very much.*** At first the prices seemed rather high, but I find by experience that it pays to feed the best foods obtainable, especially ***when the best results are wanted.*** Whenever I have changed to the cheap grades of foods, especially screenings, I very soon can notice a decrease in results. I fed your Laying Mash this past winter ***and it did all you claim for it.***

ALFRED H. MILLER.

"Fully One-third Cheaper"

Hartford, Conn., April 1, 1914.
Cyphers Incubator Co., Buffalo, N. Y.—

I now have some chicks six weeks old ***and they are a fine lot.*** In the beginning I used a chick food which I bought from a local dealer and must say ***it was very expensive.*** It looked cheap, judging by the quantity and price, but my chicks always seemed hungry ***while I was using this food*** and on looking it over I found that it contained about 50 per cent. grit, for which I was paying big money. I then began using your Chick Food, for this season, ***and have found it fully one-third cheaper,*** because I get more real value for my money. So again let me thank you and permit me to say that I believe ***no person can go wrong*** who uses your foods, appliances and supplies. Have just received another Cyphers Adaptable Hover, which I believe is the best of any brooding device on the market. Was urged by a local dealer to buy another kind, because they didn't carry your goods, ***but did not make this mistake.*** WM. ZIMMER.

"Hope to Raise 1,000 Chicks"

Rumford, R. I., March 21, 1914.
Cyphers Incubator Co., Buffalo, N. Y.—

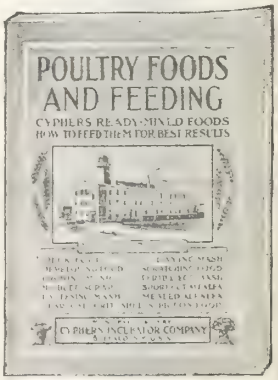
This season I am raising my chicks ***after your deep-litter feeding plan*** and so far it has been ***very successful,*** which is most encouraging and I see no reason why it should not continue to be so. Out of three hundred chicks I ***have lost only four*** so far and they now range from ***two to six weeks in age.*** The chicks are as smart as crickets and thrive well on your brand of Chick Food, ***which I am using exclusively.*** Before the season is over I hope to raise 1,000 chicks and I now see where I ***can save a great deal of labor*** by using your plan of feeding. Have found your goods superior to others I have had and you can put me down ***as a customer who is well pleased*** with your Chick Food and labor-saving methods.

(Miss) A. W. PICKERING.

Cyphers Company's Chick Food

This 100-Lb. Bag will feed 100 Newly-Hatched Chicks Four Weeks, or 50 Chicks Six to Seven Weeks. Price $2.50 F. O. B. Buffalo, Boston, New York City, Chicago and Kansas City. Price F. O. B. Oakland, $3.00.

Cyphers Company's Developing Food



This is a Medium-Granulated, Five-Grain Balanced Ration that we Advise our Customers to Feed to Growing Chicks Between the Ages of Six to Twelve Weeks, Before They are Given Whole Grain. Write for prices.

"They Are Growing Rapidly"

Ruark, Va., March 23, 1914.
Cyphers Incubator Co., Buffalo, N. Y.—

I am using your Sealed-bag Brand of Balanced-ration Chick Food ***with fine results.*** Have a lot of chicks ***three weeks old*** that I am feeding in accordance with your pamphlet, "Poultry Foods and Feeding" ***and they are growing rapidly.*** Never saw chicks ***more healthy or stronger.*** Later on I shall use your Growing Mash and Fattening Mash as the chicks increase in age and size.

MRS. L. D. LYON.

This Book Would be Cheap at $5.00 Per Copy, Judged by Actual, Detailed Value of Contents. Tells How To Produce Broilers, Fryers, Roasting Chickens and Capons; Also Exactly How to Feed the Layers and Breeders. 52 Pages, 7½ x 10 Inches. One FREE COPY on Request to Any Address.

"Beaten to a Frazzle"

Sherlock, Cal., Feb. 20, 1914.
Cyphers Incubator Company:—

I got a Portable Hover from you last month and it's a dandy!!! I want ***another one just like it*** at once. Haven't lost a single chick. It's got the old hen beaten to a frazzle. Enclosed find my check for another one—the same as I got recently. Express it at once to—

DR. T. B. SPALDING, R. R. No. 4.

"Giving Good Satisfaction"

Peoria, Ill., March 31, 1914.
Cyphers Incubator Company:—

Am glad to report that the self-regulating Portable Hover which I ordered from your Chicago Branch House in January ***is giving good satisfaction.*** It supplies uniform heat, furnishes fresh air to the chicks and keeps them ***warm and comfortable,*** despite the cold and changeable weather we have had thus far this season. This winter and early spring would test the good qualities of any brooding device, and your Portable Hover ***has met all requirements.*** WILLIAM L. ZELLER.

R. F. D. No. 35.

"Proved Very Satisfactory"

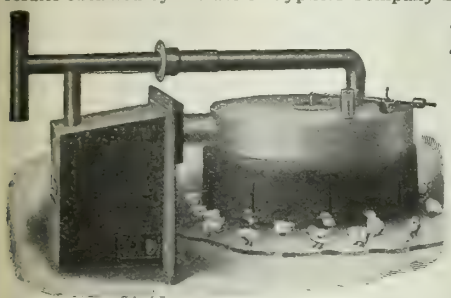
Hampton, Va., March 21, 1914.
Cyphers Incubator Company:—

The two self-regulating Portable Hovers which you shipped us ***have proved very satisfactory.*** Please find enclosed our order for three more. These brooding devices do the work required of them and we are ***glad to place this second order with you,*** which is the best evidence of our satisfaction with the first two hovers you shipped us. So far, the Cyphers Portable Hover ***is the best I have ever used.*** R. R. CLARK, Poultryman.

Hampton Normal & Agricultural Inst.

Six Places of Business:

Bear in mind, reader, that the Cyphers Company conducts six places of business (and has done so for ten to sixteen years), thus bringing its goods NEAR TO YOU and thereby saving you money on freight charges and "valuable time" in making prompt delivery. WRITE TODAY to our place of business nearest you for our "Special 1914 Consumers Prices" in ASSORTED 5-BAG, 10-BAG and TON LOTS of Cyphers Sealed-bag-brand, Balanced-ration, All-sweet-grain Poultry Foods—every bag, every ounce GUARANTEED TO POSSESS 100 PER CENT. FEEDING VALUE. Be sure to send for our Big, Free 244-page Complete Catalogue, entitled "Poultry Keeping in All Branches."



Test A Trial Order —Then You'll Know

THIS YEAR OF 1914 is a mighty good one, Reader, for you to "try out" the Cyphers Company Balanced-ration foods and FULLY TEST OUR CLAIMS. All sound, sweet grains that should be used for feeding chicks (newly-hatched or partly grown) ARE NOW HIGH IN PRICE—as you well know; yet the fact is that Cyphers Incubator Company has not increased its RETAIL PRICES, not as a rule. We still are selling at the same POPULAR PRICES that we have charged for years, the main difference being that this season we are working on a SMALLER MARGIN of gross profit than usual—and have to be satisfied. We could not change the popular retail prices of Chick Food, Developing Food, Growing Mash, etc., IF WE WANTED TO, and no one yet has been able to regulate the YEARLY CROPS or the ANNUAL COST of wheat, corn, hulled oats, kaffir corn, millet, etc.

RIGHT NOW, READER, our Sealed-bag-brand, Balanced-ration, Machinery-mixed Poultry Foods are costing us a GOOD DEAL MORE to manufacture THAN IS THE CASE in years when sound, sweet, wholesome grains COST LESS in the open market, yet we are selling our foods at the SAME POPULAR RETAIL PRICES as heretofore. Our present loss is YOUR GAIN, but we rely on the belief—on our PAST EXPERIENCE, that if you once begin to use Cyphers Company foods and thereby learn to KNOW THEIR SUPERIOR FEEDING VALUES, you will continue to use them year after year and thus will become a regular CYPHERS COMPANY CUSTOMER, not only for our mill products, but for OTHER STANDARD GOODS we manufacture.

ASSORTED ORDERS: To give our foods and our FEEDING METHODS a fair trial, we ask you to order a 5-BAG OR A 10-BAG LOT, made up of an ASSORTMENT of Cyphers Chick Food, Cyphers Developing Food, Cyphers Growing Mash and Cyphers High-Protein Meat Scrap. Make up EITHER ASSORTMENT (five bags or ten bags) according to the age and number of your chicks. On a 5-bag order we will save you part of the freight by quoting a LOWER PRICE than the single-bag price, while on ten bags (assorted) the reduction in prices will offset the freight to points STILL FARTHER from our Buffalo, Boston, New York City, Chicago, Kansas City and Oakland, Cal. warehouses.

WRITE TODAY TO OUR PLACE OF BUSINESS NEAREST YOU FOR LOWEST CURRENT PRICES AND FULL INFORMATION. Here is more down-to-the-minute evidence of the highly profitable results obtained by the use of Cyphers Company Sealed-bag-brand, balanced-ration Poultry Foods.

Cyphers Adaptable Hover

Fire-proof, Wind-proof, Insurable, Self-regulating and Automatic in Ventilation. Best Device in World's Markets for Use in Home-made Brooder Cases, Colony Coops, Roosting Coops and Portable Houses. Price, Complete, Safely Boxed for Shipment, $8.50 free on board cars at all our Places of Business, except Oakland and London. Oakland F. O. B. Price, $9.50. Entirely safe to order sample from this advertisement. Send order to place of business nearest you, thus saving time and most of the freight or express charges. Send today for our 244-page Free Catalogue.

From Eggs That Cost $1.00 Each

Glens Falls, N. Y., January 19, 1914.

Cyphers Incubator Co., Buffalo, N. Y.—

I have been operating one of your Adaptable Brooding Hovers in a piano box brooder house ***of my own design,*** and under this hover I placed chicks which I hatched from eggs purchased of the Aldrich Poultry Farm at the price of $1.00 each.

Some people would say that I was taking enormous chances, putting ***such expensive chicks under a brooder*** instead of a hen, but I would take chances with one of your self-regulating, self-ventilating, Adaptable Brooding Hovers ***a great deal quicker than I would with a hen.***

If you feed them right, the chicks entrusted to this brooding device are bound to live and grow from the very start, for ***where can you find better conditions*** for the growth of a chick? There is plenty of pure air every minute of the time that they are under the hover and no bottom heat to dry up the tissues in their little legs and give them leg weakness. Moreover, ***the heat is regulated to their exact needs*** by a positive and reliable regulator.

These Aldrich Farm chicks, fifty-six in number, were placed in this brooder the 9th of May, 1913, and out of the fifty-six ***I lost only two***—and that by no cause of the hover, let me assure you. At present these same chicks, or the pullets, are laying a sixty to eighty per cent. yield, and ***with the mercury down to fifteen and twenty degrees below zero*** for the last three days. This speaks well for the egg-laying qualities of the White Orpingtons and also shows that my chicks ***were not stunted by incorrect brooding or bad feeding.*** SCOTT B. COONS.

MORE RECENT REPORTS

"And Certainly Am Pleased"

New Market, N. J., January 4, 1914.

Cyphers Incubator Co., Buffalo, N. Y.—

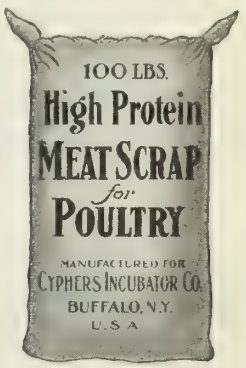
I have been using your Sealed-bag brand of Poultry Foods since last October and certainly am pleased with them. ***They go quite a good deal farther than the feeds I have been buying locally.*** Part of the enclosed order is for myself and the rest for another party who is going to use your poultry foods ***on my recommendation.*** Cyphers Foods may cost a little more, but I have found that ***they pay best in the end.***

HERBERT L. DUNHAM.

"You Can Publish My Name"

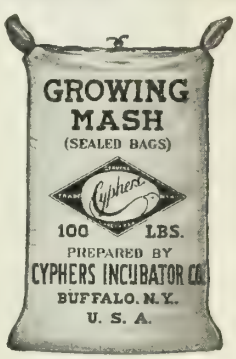
Agra, Kansas, March 12, 1914.

Cyphers Incubator Co., Buffalo, N. Y.—



Enclosed find check for 200 pounds more of Cyphers Chick Food. Thank you for the twenty-four Cyphers Service Bulletins you sent me. ***They are much appreciated.*** I think your Chick Food is simply great—***the best by far of any make I have ever used.*** It consists of sweet-smelling grain, is free from dust or waste and the chicks ***eat it up to the last particle.*** For this reason alone it is cheaper and better than the kinds that are ***about one-third dust and hulls.*** You can publish my name in testimony if you wish to do so. GEORGE R. JIRS.

Feeds Meat Scrap In Hoppers



Grand Rapids, Mich., March 16, 1914.

Cyphers Incubator Co., Buffalo, N. Y.—

Have now used Cyphers Company food products for about one year ***and am well pleased,*** especially with the Chick Food and your High-Protein Meat Scrap. Am feeding the Meat Scrap in hoppers, ***as you direct*** in "Poultry Foods and Feeding." Am also using your deep-litter method ***and it keeps my fowls in fine condition.*** While the chicks were growing they were always in good shape, never sick, and our pullets began laying the sixth of November and have not stopped since. We now have ***a fine, lively lot*** of chicks that are thriving on your Chick Food. We expect to raise about three hundred chicks this spring and they are going to be brought up "the Cyphers Company way" ***and fed on your food products entirely.*** ANTON ANDERSON.
107 So. Diamond Ave.

Nothing short of fresh, finely cut green bone and ground meat CAN EQUAL Cyphers High-Protein Meat Scrap for the RAPID GROWTH and development of chicks that are one to four months old. Young chicks will grow remarkably fast when fed a small ration each day of this "meat food." It takes the place of the thousands of bugs, worms and insects that your chicks would find for themselves if they were out on free range. Try 50 or 100 lbs. and TEST OUR CLAIMS

The only SURE WAY to feed a correctly balanced ration is in "mash" or pulverized form—then the chicks simply have to eat it in the EXACT PROPORTIONS you give it to them; they CAN NOT possibly pick out just what they want, a grain of this, or a kernel of that. Cyphers Growing Mash, as the name indicates, is a balanced ration in mash form to be hopper-fed to chicks one month to six months old. One bag will PROVE OUR CLAIMS.

Sold by Agents If you live at points that are FAR DISTANT from our six places of business, please drop us a postal card or write us a letter and ask for the NAME AND ADDRESS of the nearest Cyphers Company selling agent who carries our SEALED-BAG-BRAND of foods in stock and therefore is prepared to fill your orders promptly. There are many such selling agents in the United States and Canada and they will be glad to SUPPLY YOUR WANTS—to give your valued orders PROMPT AND CAREFUL ATTENTION.

The Common Sense Side of Buying My Tompkins' Strain Rhode Island Reds

Utility Birds

MY UTILITY BIRDS are straight Tompkins' strain, just as much so as my top notchers. They have got the blood, but they are not quite fancy enough to put them in the higher show grades. But for business purposes, we frankly believe, you will have a hard time to duplicate them—in fact don't believe you can do it for the price.

In my breeding of Reds, I have always worked towards keeping my birds a uniform, medium size, because it has been my observation that they make a better all around bird—lay better and dress more uniformly for the market. Don't make the mistake of putting too much stress on size; results are what you are after; the kind that makes a noise like money.

I never had a finer lot of Utility Birds or a better collection of Near Silks. Single Utility Birds, $3. Five or more for $2 apiece. Utility Eggs, 15 for $2, or $10 per 100. Near Silk eggs, 15 for $5, 30 for $8, 45 for $10, and $20 per 100.

This grand bird won first ribbon and shape special at the December, 1913, Madison Square Show, New York, against the strongest competition I have ever experienced.

MATING LIST

We have taken a little more pains this year in putting better descriptions in our mating list. In most cases you can order direct from it without correspondence. It contains all the prices on all our grades.

CATALOG

Whether you are going to buy any Tompkins' birds or eggs this year or not, you want our new catalog. We are not exactly bragging about it, but we do think it comes nearer being a real Rhode Island Red catalog than anything we have seen yet.

Show Birds

I grade my birds close. For example if any of my Top Notchers don't notch up, as they should, I promptly put them in the Near Silk class. Tompkins' birds have got to grade right up to the Tompkins' standard and that's all there is to it.

I am conducting my business up here on my little old farm at Concord, Mass., not in a fancy chicken farming way, but on exactly the same dependable, result-producing lines that were pursued by my father and which have resulted in birds of remarkably uniform dependableness.

By that I mean—Tompkins' birds started winning 12 years ago, and every year at every show where shown—they have made **leading winnings.**

I do not mix my strain. The birds you buy of me are Tompkins' strain. You can depend on it. I am not much given to "glowing enthusiasm" but it does seem to me that we never had a finer lot of Near Silks, Top Notchers and Special Top Notchers.

The demand for eggs was never better and there's an unusual request for fine pens. Happily we have a fair supply still. If you want a choice Top Notch cock we have several that are worth $50 if they are worth a cent. Send for particulars.

The Best S. C. White Leghorns in America

The Best S. C. White Leghorns in America, will, we honestly believe, be hatched from our matings this season. If you could see the marvelous quality in all our pens, you would say so too. We entered in 23 classes in four shows this season and won 1st in 20 classes and 2nd in the other three.

We have won more firsts, specials and other awards in the past four years at the Grand Central Palace, New York, Boston, Hagerstown and Philadelphia than all our competitors combined.

At the last **Palace, New York, show,** in what everyone conceded to be the strongest and best class of Leghorns ever exhibited in this country (don't take our word for this—look up the comments in any poultry paper), we won the display prize by over **1,000 points more than our nearest competitor, besides Best Pullet and display in the whole Show.** Our stock has not only won for us—it has won for our customers in most every part of this country and Canada.

Hatching Eggs 60c each from first 10 pens, everyone headed by a champion male; 35c each from pens 11 to 20, each headed by a prize-winner; 20c each or $15 per 100 from good pens headed by cracker-jack males. Send for catalog and mating list. Mention A.P.J.

WHATGLEN FARM Champion S. C. Black MINORCAS

Madison Square Garden, N. Y., Winners. Since 1906 birds of my breeding and of my line have won at the leading shows the country over. Their record is history—commending them for highest quality and greatest possible worth. I offer mated breeders, line bred, in any desired number, having the largest farm and largest stock. **Eggs for Hatching** from selected pens, $5 per 15. From special matings, $1 per egg. Write me your wants and for catalog, please. **Whatglen Farms, Frank McGrann, Owner, Hiram Demmy, Jr., Mgr., Lancaster, Pa.**

Riley's Barred Plymouth Rocks

Have been consistent winners at America's leading show MADISON SQUARE GARDEN

This season, in quest of new fields to conquer, they made a record of unparalleled importance at two of the largest Shows,

BOSTON—INDIANAPOLIS

It is one of the prerogatives of many breeders to boast of the laurels they have won, themselves, at different shows, with birds they have raised and shown, which only goes to show that they are raising birds of that description for themselves. I would rather boast of the fact that I am able to supply my customers with eggs from which they raise the winners. Here is an example:

Darien, Conn., Feb. 10, 1914.

Dear Sir: I am pleased to report result of hatch. Out of the eggs from Pen No. 4 we raised five Cockerels and two Pullets. With three of the Cockerels we won First and Second at Stamford, Conn., in the open class and the other Cockerel headed the First Pen. Judge C. H. Welles (who has judged at New York) pronounced him in a class by himself **and good enough to win at Madison Square Garden.** Yours truly, (Signed) P. G. SEXTON, Supt.

I have produced winners for my customers at Madison Square Garden, Boston, Chicago, Buffalo, St. Paul, Los Angeles, etc., and I can do it for you. Before making your final decision where to purchase your eggs, send for my illustrated mating list, and be convinced.

"NOTE: Through an error in my Mating List, I have failed to credit the ownership of the 2nd and Undercolor Special Cockerel at Boston, as belonging to Mr. George D. Thompson, Jr., R. 1, Hope, R. I. I stated that this bird won 4th, which was a mistake. This being a bird of my strain, Mr. Thompson allowed me to refer to this winning in my Mating List, and I desire to give him full credit for the grand birds which he owns."

HENRY D. RILEY Box B Strafford, Chester Co., Pa.

YOU (Whoever You Are) CAN MAKE MORE MONEY

from "The World's Best"

White Wyandotte Eggs for Hatching

HOW?—you ask. AND WHY?

The quality of the birds determines the quality of the eggs. Eggs from flocks of **such uniform excellence** as Fishel's White Wyandottes will produce poultry that is a credit to any one, and that are **profitable.** No uncertainty about Fishel's Wyandotte Eggs; they are right, they must be right.

THE WORLD'S BEST may not be cheapest to buy, but are the cheapest to use for hatching. You can buy eggs for less money, for a smaller sum on the start, but, what about the "wind up"? What about **results?** There's where you appreciate the quality you have purchased when you buy eggs from our yards.

When you pay $5.00 for a sitting of fifteen (from our best breeding pens) we know this man wants quality and we see that he gets it.

If you buy eggs from our fine flocks of free range White Wyandottes, for $10.00 per 100, we give you more for the money than you can get anywhere else. How can we do it? From a lifetime of experimenting, of perfecting, of selecting, and mating, and selling. From our experience with White Wyandottes we know what the fowls must be.

We've told you about our White Wyandottes, their show record, etc., that we know you have not been able to remember all of them, but, if you want more evidence, more proof before you buy, send for our catalog. If you want eggs promptly, then order direct from this ad. First come first served.

SCHWAB BROS. BOX 451 IRONDEQUOIT, N. Y.

$500.00 IN CASH GIVEN AWAY

By The American Poultry Journal Publishing Co.

In order to secure more subscribers to AMERICAN POULTRY JOURNAL and secure them quickly, we are making one of the most liberal offers it has ever been your good fortune to receive—READ IT THOROUGHLY.

To the man or woman, boy or girl, who sends us the largest number of subscriptions before June 15th, 1914, we will give $200.00 in cash.

To the one sending in the second largest number of subscriptions, $150.00 in cash.

To the one sending in the third largest number of subscriptions, $100.00 in cash.

To the one sending in the fourth largest number of subscriptions, $50.00 in cash.

To the next six largest lists of subscriptions, the following prizes will be given:

Fifth Prize—150-Chick Simplex Feather Brooder.
Sixth Prize—100-Chick Simplex Feather Brooder.
Seventh Prize—50-Chick Simplex Feather Brooder.
Eighth Prize—20-Quart Simplicity Kant-Klog Feeder.
Ninth Prize—10-Quart Simplicity Kant-Klog Feeder.
Tenth Prize—6-Quart Simplicity Kant-Klog Feeder.

In case of a tie the value of the prize will be divided. All subscriptions mailed before midnight of June 15th and bearing the postmark of that date will be counted in the contest. In this manner those living at a distance have an equal chance with those residing nearby. Prizes will be awarded June 20th and list of winners given in the July issue of American Poultry Journal.

BUT THAT IS NOT ALL

In addition to these Grand Prizes you receive a liberal commission on every subscription. All subscriptions must be taken at the full subscription price of One Dollar per year or THREE YEARS FOR $2.00.

For every one year subscription you keep 25c commission. Send us 75c together with coupon properly filled out and receive ONE COUNT on the contest.

For every THREE YEAR subscription you keep 50c commission. Send us $1.50 together with coupon properly filled out and receive THREE COUNTS on contest.

In addition to this you can sell copies of the AMERICAN POULTRY JOURNAL YEAR BOOK FOR 1914. This is the greatest poultry book for ready reference, read all about it on page 774 of this issue of American Poultry Journal. The book sells at 50 cents per copy paper bound and $1.00 per copy cloth bound. It will cost you 30c paper bound and 60c cloth bound.

You can also take orders for the book in combination with AMERICAN POULTRY JOURNAL at the following prices:

AMERICAN POULTRY JOURNAL ONE YEAR and the YEAR BOOK for 1914 paper bound, $1.25.
AMERICAN POULTRY JOURNAL THREE YEARS and YEAR BOOK for 1914 cloth bound, $2.50.

If taken at these prices you send us ONE DOLLAR for American Poultry Journal for 1 year and the paper bound Year Book and receive credit for one count on the contest, and send us $2.00 for American Poultry Journal for 3 years and the cloth bound YEAR BOOK and receive credit for three counts on the contest.

A Good Inducement

If you want to make the best of your time and secure the most subscriptions to win the first cash prize of $200.00 you will find it profitable to offer a copy of the AMERICAN POULTRY JOURNAL YEAR BOOK for 1914 FREE with every subscription to AMERICAN POULTRY JOURNAL. Offer a paper bound copy free with every one year subscription at $1.00 and a copy of the De Luxe cloth bound edition of the book Free with every three-year subscription at $2.00.

It will cost you nothing to do this, as you are only giving the subscriber the advantage of your commissions, at the same time you are giving him greater value for his money than he can secure elsewhere at this time—you save him twenty-five or fifty cents—he helps you on your way to win the $200.00 cash prize. Try it and see how easy it will be to get subscriptions to the ONE GREAT POULTRY PAPER OF AMERICA.

How to Approach Prospective Subscribers

There are various means employed by different people in approaching a prospective purchaser. Many people would rather "take a licking" than ask a man to buy something. They are weak—lack nerve—need someone to push them along and usually are found on the bottom rung of the ladder to success. The man who lacks the "get up" to ask another man to subscribe to the AMERICAN POULTRY JOURNAL in order to assist him to win one of the cash prizes, certainly shows a lack of nerve. The AMERICAN POULTRY JOURNAL was established in 1874—it is the oldest poultry paper in AMERICA—is published monthly and contains about 1800 pages per volume (12 months). It is the largest poultry paper in the world and is profusely illustrated with pictures of prize winning poultry and drawings of houses, etc, which are of interest to poultrymen. The many interesting articles written by Dr. Prince T. Woods (managing editor) and many other writers of national reputation as successful poultrymen are worth many times the subscription price of AMERICAN POULTRY JOURNAL, and when these articles are brought to the attention of the prospective subscriber, together with an offer to give a copy of the great AMERICAN POULTRY JOURNAL YEAR BOOK for 1914 FREE with the subscription, you can rest assured that you will not be turned down.

The best evidence we have of the apparently easy way in which subscriptions are secured to the American Poultry Journal is a letter written to us by a prize winner in one of our former contests, Mr. C. E. Hartman, of Stewartstown, Pa. He writes us as follows—(read his letter carefully):

EASY AND PROFITABLE PASTIME.

I will endeavor to give my experience in soliciting for the American Poultry Journal. I first started out to get six subscriptions for a special prize, and behold, when it came, why here came a list of the prizes to be given out for the largest number of counts sent in during the contest. I looked it over carefully and decided to go right after one. So I just stuck a Journal in my pocket and started to work, asking every person I came across, and I found it no hard task to secure the counts which won first prize. I would look carefully over the Journal and explain what was in it and next I would write him up, either for one or three years. Some days I would get many names and get them all between working hours.

But whoever goes out soliciting for the American Poultry Journal will not go amiss, as it certainly is the best poultry journal that is bound between two covers. As I am a breeder of White Orpingtons and also a new beginner in the business, it was a delight for me to solicit for the American Poultry Journal. I think it taught me many interesting points that perhaps I would have had quite a time finding out. Experience is what I want, and that is what the American Poultry Journal will teach you.

C. E. Hartman.
Stewartstown, Penn.

See other page for special prizes and directions

GENERAL DIRECTIONS

All subscriptions taken to AMERICAN POULTRY JOURNAL must be taken on the merits of the paper. The subscriber must pay ONE DOLLAR for a one year subscription, or TWO DOLLARS FOR A THREE YEAR SUBSCRIPTION. The agent may offer a copy of the YEAR BOOK for 1914 FREE with every subscription as per previous mention.

The agent must remit to the publishers of AMERICAN POULTRY JOURNAL 75 cts. for every one year's subscription without any book and for such a subscription he will be credited ONE COUNT on the grand prize contest. He must remit $1.00 for a one year subscription and a copy of the YEAR BOOK paper bound and for such a subscription he will be credited ONE COUNT on the contest. For every THREE YEAR subscription without any book the agent must remit $1.50 and for such a subscription he will be credited THREE COUNTS on the contest. If a cloth-bound year book is to be sent to the subscriber with the subscription, then the agent must remit TWO DOLLARS and he will be credited with THREE COUNTS on the contest. (Note that subscriptions only are counted on the contest, and not book orders.)

Every agent will be furnished with the necessary coupons and sample copies upon request. If coupons run out send for more—if they don't reach you shortly, send in the names on a list but be sure to put your name and address on this list so that we know who sent it in.

All subscriptions which are mailed before midnight of JUNE 15th, 1914, will be counted on the contest (thus giving those living at a distance an equal chance with those residing nearby). All contestants will be informed from time to time just how the contest is progressing—where they stand, etc. This information will be given to all who state their desire to enter this great $500.00 CASH contest. Remember, EVERY-ONE GETS A PRIZE who enters and sends at least five subscriptions.

CANADIAN SUBSCRIPTIONS require 25 cts. per year extra for postage.

FOREIGN SUBSCRIPTIONS require 50 cts. per year extra for postage.

RENEWAL SUBSCRIPTIONS COUNT THE SAME AS NEW SUBSCRIPTIONS. YOUR OWN SUBSCRIP-TION COUNTS THE SAME AS ANY OTHER.

Coupons May Be Distributed by Mail

If you have friends living in other cities who are interested in poultry or who have other acquaintances who are interested in poultry, sign your name as agent to a supply of CONTEST COUPONS and mail them to these friends telling them how they can assist you to win one of the $500.00 cash prizes by filling in one coupon themselves—getting a few of their friends to subscribe and sending the coupons together with remittance either back to you so that you can send them to us, or, they can be sent direct to us and we will credit you with the subscriptions just the same as if you sent them in yourself. When calling on your friends in this manner BE SURE THAT YOU WRITE YOUR NAME AND ADDRESS ON THE COUPONS AS AGENT.

Cash Prizes

First Prize . $200
Second Prize $150
Third Prize $100
Fourth Prize $50

Six other prizes—See other side.

How to Become an Agent

Everyone sending us two or more subscriptions will be considered an agent and eligible to secure one of the GRAND PRIZES. Simply send in your subscription (new or renewal) together with one more and you have qualified as agent and are entitled to agent's prices on books and subscriptions until June 15th, 1914. TAKE ADVANTAGE OF THIS FACT; you may never have another opportunity like this to get agent's prices and a chance to secure one of the $500.00 CASH prizes.

(Agents must send in their subscriptions at least once every week; we would appreciate it if agents would send in on Saturday and Tuesday of each week regardless of how few subscriptions you have to send in. Make all remittances by Postal or Express money order and keep your receipt in case of complaint.)

SPECIAL PRIZES—For the first five subscriptions which you send us to count on the grand prizes we will send you one 10-qt. Simplicity Kant Klog Poultry Feeder.

This feeder should be part of the equipment in every poultry yard. It feeds your chickens automatically without care or attention on your part—it never clogs up—never gets out of order—is always on the job and you can go away for days at a time and rest assured that your birds are being fed properly. This feeder is made of heavy galvanized iron—well constructed—simple, yet mechanically perfect—and will reduce your feed bills by saving grain. No sparrows or rats can get at the feed in a SIMPLICITY KANT KLOG POULTRY FEEDER. No grain is left lying on the ground to get soggy, filthy and unfit to eat by the chickens. This feeder feeds your birds clean, fresh feed when they want it, never too little, never too much. Go to four of your friends, show them a copy of AMERICAN POULTRY JOURNAL, tell them about the great AMERICAN POULTRY JOURNAL YEAR BOOK FOR 1914, ask them to subscribe, then send in these four subscriptions, together with your own (NEW or RENEWAL), and receive one of these great time and money saving 10 qt. SIMPLICITY POULTRY FEEDERS.

REMEMBER—These five subscriptions will also count on the grand prizes and that one of these feeders is given only for the FIRST FIVE subscriptions sent in by a contestant in order to give everyone a prize if they are not fortunate enough to win one of the $500.00 Cash prizes.

WHAT AN AGENT CAN DO WHO IS WILLING TO HUSTLE

I, being a raiser of fine bred poultry, and an Agent of Poultry Supplies, one day while reading the "American Poultry Journal," the thought came in my mind that I could get a good many subscriptions for the "Journal" among my customers.

So I entered the Contest in January, 1909, and started in to win the Pony Rig, which was the First Prize. I kept the lead for January, February and March, then I was taken sick with Grippe and was laid up for two weeks. During this time, Mr. Hartman of Pennsylvania got in ahead of me, and when I got on my feet again it was "nip and tuck" between us until the Contest closed, on the 19th of June. He winning the First Prize and I the second, *One Hundred Dollars* ($100.00) *cash*. Mr. Hartman winning by about forty counts.

I felt a little discouraged in not winning First, as I am sure that I would have done, if I had not gotten sick and lost the two weeks' time. However, I worked for the Company all through the summer months, selling the "Journal" on commission, and when the Fall Contest started September 10th, I started in again, keeping the lead for September, October and November, when Mr. Jackson of Massachusetts ran in ahead of me, keeping the lead through the balance of the Contest. He winning First Prize, Two Hundred Dollars ($200.00), and I winning Third Prize, Fifty Dollars ($50.00). But Mr. Jackson worked in quite a different way from me, having *other* agents under him and most of his subscriptions were for three years, which gave him four counts on each subscription. Mine were all *one year* subscriptions, and I got only *one* count on each of them.

The next Contest opened on January 1st, 1910, but I did not enter it until the 10th of the month, as I was undecided as to whether to enter or not; but after thinking the matter over, I decided to make another break, so started in. The Company put up fine Specials for January, February, March and April—a $20.00 Brooder Incubator, or a Pen of Fowls for First Prize, $15.00; Brooder, Incubator, Pen of Fowls for Second prize, $10.00; Incubator, Brooder or Pen of Fowls, Third Prize.

I winning First for each month, and a Watch for May. This being the Second watch I won. When the Contest closed I became possessor of the First Prize, which was one of Wing & Sons Circassian Walnut Pianos.

All the prizes that I won were well worth working for, especially the Piano. It is Wing & Sons Concert Grand, which is certainly a very fine Piano, and my wife being a pianist and organist, has given it a good trial, as I made the Piano a present to her for Christmas, and she is more than pleased with it.

The Piano case is very handsome, being Circassian Walnut with a beautiful grain, and it is an ornament for anybody's parlor.

I can say that any agent that works for the "American Poultry Journal" Publishing Company, will be *well paid*, as they certainly keep up to what they *agree* to do.

Yours very truly,
Arthur S. Johnson.

BUILDING MATERIAL PRICES

Never again will such remarkably low prices exist. Don't delay—send your order at once. Act now.

ROOFING

Corrugated STEEL ROOFING
1¼c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of its real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice—way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

Corrugated STEEL ROOFING
Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1¼c per square foot, we furnish our grade CE-700 Steel Roofing, in sheets 22x24 inches ±1¼ inches. This price is delivered on board cars at Chicago.

Galvanized STEEL ROOFING
2¾c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing and will last indefinitely. We'll furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2¾c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2¾c per square foot is for our Lot CE-800 corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

Ready Roofing With Supplies
62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll.

The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 85c per roll of 108 square feet, and at this remarkably low price

We Pay the Freight

in full to any point east of Kansas and Nebraska and North of the Ohio River.

We will also furnish 2-ply, at 90c; 3-ply, at $1.05.

This Ajax Roofing is guaranteed to wear as long and give as good service as any Rubber Surface roofing on the market.

SEND FOR SPECIAL ROOFING CATALOG AND SAMPLES

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing.

Chicago House Wrecking Co.

Now operated under the name of Harris Bros. Company.

For 22 years the Chicago House Wrecking Company has been well and favorably known to the public. During all these years the four Harris Brothers have been the executive officers and owners, and for that reason have finally decided to operate under the name of HARRIS BROTHERS COMPANY.

There is no change in our business, except that in the future the four Harris Brothers will advertise and sell their goods heretofore advertised and sold under the name of Chicago House Wrecking Company, under the name of HARRIS BROTHERS COMPANY.

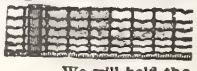
Our Guarantee

We guarantee absolute and complete satisfaction. There is no half way about this guarantee. Every purchase you make from us will be exactly as represented, and you will be satisfied in every way, or we will make such just amends as are within our power. We will take back any unsatisfactory article at our freight expense both ways and refund the purchase price. We refer as to our responsibility, to the publisher of this or any other publication, any bank or express company, and to the public at large.

FENCING

Brand New WIRE FENCING Less Than 1 cent Per Running Foot

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of its real value; lower in price than ever before, notwithstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.



Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12½ wire, with good weight barbs. Price per 100 lbs. during this sale, only $1.95. Order by Lot No. CE-600. Several thousand spools of this Barb Wire, Painted, price per 100 lbs. $1.75. Order by Lot CE-500. Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 80 rods to the spool, made of No. 14 galvanized wire No. 16 barbs, barbs 5 inches apart; price per spool of 80 rods $1.45. Lot CE-400. We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

GALVANIZED HOG FENCING AT A MATERIAL REDUCTION IN PRICE

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, only 15c. Order by Lot CE-900. Same fencing spaced 6 in. apart, per rod during this sale, only 21c. Order by Lot CE-1000. Other heights at proportionately low prices.

High Grade Poultry Fencing 48 in. High PER ROD 27c

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

Smooth Galvanized Wire $1.00 per 100 lbs.

Sold "as is," as near as possible one guage only to the coil. Our price of $1.00 per 100 lbs. is in lots of 1000 lbs. Where ordered in other quantities our price for gauges 9 to 12 per 100 lbs. $1.25. 16,17,18 gauges, $1.45.

SOME BIG BARGAINS IN NAILS

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 100 lbs., as follows:—

10 pennyweight, $2.00	8 pennyweight, $2.10
6 pennyweight, $2.15	Shingle Nails $3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, per 100 lbs., $1.38. Order by Lot CE-1100. We have other bargains in nails.

Also, in the same job, we have 5,000 kegs of Fence Staples, galvanized, per keg, $2.00. Lot CE-1400.

Crimped wire for reinforcing, cut to any desired length; per 100 lbs., $2.00 Lot CE-1300.

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is to send your order now, and we will hold for shipping instructions.

LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

20,000,000 Ft. of New Lumber at Our Yards and Warehouses ready for Quick Delivery

We have upwards of twenty million feet of first class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villages everywhere. It is our determination that 1914 will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring—talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.

Personal Service To You

You can get the kind of service that will give you absolute satisfaction—satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Greatest Architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our *Book of Plans* and Latest *Catalog of Building Material* and Supplies.

Important Announcement

THE STRATFORD FARMS take pleasure in announcing to the poultry world that they have secured the stock, trade and good will of the famous experts and breeders, Judge W. R. Graves and Mrs. S. H. Graves, breeders and exhibitors of

White Rocks
and
White Wyandottes

In making this deal, we were also fortunate enough to secure the services of Judge Graves as Manager of our Poultry Department.

This means that our former patrons and prospective customers will be furnished with the "Graves World Renowned Blue Ribbon Strain" fowls.

Mr. and Mrs. Graves as breeders and judges are known by all poultrydom—they have judged at most of the leading shows and Mr. Graves was one of the judges at the World's Fair.

Just write your wants. They will give you their personal attention and will only be satisfied when you are.

Our farm has excellent shipping facilities, being located just 24 miles from Chicago on the C. M. & St. P. R. R.
Write today—we have the stock and can satisfy you

W. R. Graves, Mgr. Poultry Dept. **ROSELLE, ILLS.**

Above All—The Henderson Strain

AMERICA'S FOREMOST

Barred Plym. Rocks for Exhibition and Utility

Madison Square Garden, New York, Chicago and St. Louis Winners

This grand strain is large framed, with wonderful type, has long, deep bodies, broad backs, well spread tails carried low, and that snappy distinct barring to the skin, that wins in the best of competition.

My first prize cockerel and grand champion male at Chicago 1912 in a class of 54 of the best in the world proves that my strain carries the maximum of quality in Barred Rocks today. His type and barring created a sensation among Barred Rock breeders of the world. A number of his wonderful sons will head my 1914 breeding pens.

When you start to make up your breeding pens this year and find that deficiency which you desire to overcome, **remember that I have the strongest lines of breeding Barred Rocks in America**, and can furnish males and females with the quality desired to balance the pen and improve the progeny.

My **Barred Rocks** have won consistently at all the large national shows for the last 20 years in all competition as a result of being line bred and pedigreed. Compare my winnings with those of any other breeder and form your own conclusion as to who has the best producing strain.

First Prize Pullet Bred Cockerel, Coliseum, St. Louis, 1913

For the season of 1914 I will mate 50 breeding pens in both my **Cockerel** and **Pullet lines**, from which I will furnish eggs for hatching at prices quoted in my mating list and catalog which describes each individual specimen that I will have in breeding. These pens will contain my Madison Square Garden, N. Y., Chicago and St. Louis winners and their descendants. The inherent characteristic quality as bred in the **Henderson Strain** both in the Cockerel and Pullet lines, and demonstrated by their public record in the best show rooms in America, enables me to mate for the season of 1914 the strongest breeding pens of **Barred Rocks** in the world.

Write for my new Catalog-Mating-List which minutely describes these pens and **the largest exclusive Barred Rock farm in the world.**

THE WELD THAT HOLDS

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

MAURICE F. DELANO, Proprietor FRANK H. DAVEY, Superintendent

Aldrich White Orpingtons

If you wish to succeed with poultry, start right by purchasing eggs from the best strain of the best and most popular of poultry, the S. C. W. Orpington.

Eggs at Reduced Prices

Our pens this season are the best ever mated in the world and contain over 200 trapnested prize winning females, each pen headed by a prize winning male at America's best shows.

After May 10, eggs from these grand matings will be **half price** or $7.50 per setting of 15, with the exception of our Special Pen, headed by Quality King, our 1st Madison Sq. Cock, 1913 and our pen de Luxe, headed by our 1st Madison Sq. ckl., '13, from which 2 pens eggs will be $1 each, and not over 5 eggs to one customer from these pens. Eggs from our $5 matings will be $3 per setting, or 2 settings for $5 and every customer purchasing $10 worth of eggs will receive our booklet "From the Shell to the Showroom" free.

Why Experiment? When you can get the **very best** at such reasonable prices. **Never before** has such value been offered in eggs of such a quality **so early in the season.** We have a larger number of early chix out than usual, so will need to set fewer eggs in May and June than usual, thus enabling us to give our cusomers **reduced prices from all matings earlier than usual.**

This opportunity has never been yours before. We do not expect to show this season, except at Madison Square Garden, thus giving **our customers a chance to win in all** of America's best shows.

Send for our new catalog and mating list, and place your order early for delivery at any certain date.

After May 15 we will have for sale a limited number of our this year's breeders at attractive prices. Mention the A. P. J. when writing.

The Golden Road To Success — Aldrich Chick Grower

A Specific for Bowel Trouble or White Diarrhoea

This preparation has been in use for over five years by the discoverer, *Mr. Leonard Rawnsley* and has met with marked success in the hands of *America's most* noted poultrymen.

Read following testimonial and send for circulars containing additional testimonials of prominent poultrymen.

Aldrich Poultry Remedy Co., Boston, Mass., April 7, 1914.
Gentlemen:—
Enclosed find $1.00 for one can of your Chick Grower, the greatest bowel remedy on the market that I have used and I have been an "easy mark" for all kinds. Last season I had two jars of your remedy and so far this season three cans and have not lost a chick since using it with bowel trouble. I have fifty chicks seven weeks old, they weigh 1½ lbs. each, following instructions in your little book "Shell to The Show Room." Yours truly, E. E. Wood.

The price of *Aldrich Chick Grower* is $1.00 per quart jar, enough to raise 100 chicks beyond the danger point. Add *zone postage 3-lbs. Do not lose your chicks* when an *Absolute Remedy* can be secured at a nominal cost.

Profitable Management of a Large Plant

Saving Labor on a California White Leghorn Ranch Where Thirteen Thousand Fowls are Kept for Egg Production

By Eugene Hodges

TO CARE for thirteen thousand fowls with but two assistants is an achievement from which many lessons may be drawn. This is what C. H. Dangers, a California White Leghorn breeder, is doing. His farm is located about four miles from one of the largest poultry markets in the state, which makes possible the marketing of eggs at a minimum cost, this with the right economy in the cost of production is making good profits for Mr. Dangers.

The most interesting part of his experience is that which has to do with the methods of handling the work to save time and expense. His place is well planned and well kept; in fact, he considers that he could not do the work so economically if everything were not kept in the best condition. "Just so soon as you let things begin to run down, you are going to waste time, and bring on unnecessary expense," is Mr. Dangers' doctrine.

The poultry houses and yards are arranged along two avenues which are used in caring for the fowls. The houses are combination laying houses and scratching sheds, each with a capacity of 350 hens. The laying house is 12 x 24, and the shed is 10 x 24. The yard is 150 x 160. The accompanying picture shows the appearance of these houses.

One of the economies in labor is found in the outdoor nests. These are seen in the picture of the house, and one is shown in detail in another picture. They are built on skids so that they may be easily moved from one part of the yard to another, or from one of the double yards to the other as the fowls are moved to be run on green stuff. The nests are made in sections of ten, with a shed roof to protect them from the weather, and to keep the nests dark. The opposite side contains a door that may be opened to expose the eggs. These nests are arranged in rows in the yards, and the time required to gather the eggs is very much lessened. The house is really not a laying house at all, but a roosting house. It contains two rows of roosts which extend along either side and are so made that they may be quickly swung up against the wall when the droppings are to be cleaned up. The roosts are about two feet from the floor, so this avoids the use of dropping boards. The floor of the house is raised about three feet from the ground and a door on the side of the drive makes it possible to scrape the droppings directly into the wagon that is backed up to the building. This saves one handling of the droppings, and the work of cleaning is done in about half the time.

Mr. Dangers has adopted the following method of feeding the morning mash. Self-feeders are arranged along the fence on the driveway side of the yards. The trough itself is built on the outside of the fence with an opening on the inside. This makes it possible to fill the troughs from the driveway without opening the gate. A man can walk rapidly from one end to the other and the work of giving the morning feed is accomplished. One of the pictures shows the appearance of this mash feeder on the inside. Wires have been stapled across the front so as to prevent the fowls from crawling out through the trough.

In transporting the food from the feed house to the pens, a low wagon is used which makes it possible to step from the ground into it or out with full pails in the hand. For some time wheels made of planks were used on this wagon. These have been found to be too expensive, however. They wear out

Combined roosting house and scratching shed on 13,000-hen ranch of C. H. Dangers, California. See article entitled "Profitable Management of a Large Plant."

Outdoor nests used to make work of egg gathering easy on the 13,000-hen plant of C. H. Dangers, California. See article "Profitable Management of a Large Plant."

too fast. Metal wheels are used now and the expense is much reduced. One horse is used on this wagon as shown in the accompanying picture. The box is built with high sides in front and sloping sides on the side. This makes it convenient to carry a surplus of feed in the front part, and keep the pails and partly

Dry mash troughs conveniently arranged along the fence of the central driveway for ease in feeding the 13,000 layers housed in flocks of 350 each, C. H. Dangers' California Leghorn Farm. See "Profitable Management of a Large Plant."

emptied sacks in the rear where they can readily be secured without climbing into the wagon. The empty sacks are hung on a hook at the side of the box.

One of the greatest expense and labor savers on this farm is the electric trolley line that runs along one edge of it. Mr. Dangers has built his feed house near the track, and the trolley company built half of the loading platform and established a station there for his convenience. Feed is bought in carload lots and is delivered by trolley on short notice and for a delivery cost of 75 cents per ton. When you know that from 50 cents to $1 a ton is saved by buying the feed at wholesale, you will see that it is a wonderful advantage to have it delivered into your barn at the small cost of 75 cents per ton. If his men had to do the hauling, it would cost much more.

Trolley line special feed station and grain house on C. H. Dangers' 13,000 Leghorn Ranch, California. This is one of the special features of this poultry plant. Trolley freight which hauls grain and carries eggs to market is shown approaching Dangers' Station. See "Profitable Management of a Large Plant."

In order to get the trolley company to build the station there, it was necessary to give it a quarter of an acre of ground. The feed wagon is driven up to the door of this storage barn, and the food for the trip loaded on. At the other end of the avenue is the packing house, and on the return trip the cases of eggs are brought to the trolley station.

The freight on eggs is five cents per crate, but Mr. Dangers has an arrangement with a dealer whereby he receives the full market price and has no freight to pay. There are two freights each way each day.

The accompanying picture will give an idea of the arrangement of the feed house with relation to the trolley station. One of the freight trains is shown approaching the station.

In the incubator house are 16 machines each with a capacity of 540 eggs. These are heated by gasoline gas made by a gas machine in the tower house near by.

The brooder house is 16 x 310 and will accommodate 10,000 chicks at one time. It is heated by hot water with hovers that run along the alleyway on one side of the building. This house is divided into 30 pens each with a yard 120 feet long. This is an unusual length for yards of a brooder, but Mr. Dangers believes that it pays to give the babies plenty of room. He declares that they use all of the space to good advantage, and with so much room in which to exercise, he has nothing but healthy chicks. The house and yards cost $4,200.

An electric thermostat is used in the hovers. A distillate oil burner is used to heat the water, and there is always the

The feed wagon used on C. H. Dangers' 13,000 Leghorn Ranch, California. See "Profitable Management of a Large Plant."

danger of the fire going out or the hovers becoming too warm. This electric thermostat rings a bell in the house and one in the brooder house when the temperature varies to a dangerous degree. Attesting its value is the experience of Mr. Dangers in which he might have lost $2,000 worth of chicks on a night when the wind blew out the fire. The chicks were only three days old, and they could not have withstood a material reduction in the temperature. As it was, not a chick was lost, because the bell woke up the owner and the fire was relighted at once.

On an average, 89 per cent of the chicks that are put into the brooder go into the rearing houses, so you see the percentage of loss is small. The chicks are kept in the broods from 8 to 10 weeks, and are then taken to the rearing houses where they remain until they begin to lay.

In this brooding house Mr. Dangers has a small cart, very simple, but useful in saving a great many steps in his three

Home-made platform, with detachable box, hand car for use in brooder house on C. H. Dangers' 13,000 Leghorn Ranch. See "Profitable Management of a Large Plant."

hundred feet-long house. Sufficient food for the whole row of pens may be taken on this cart at one trip. It is a simple platform mounted on low metal wheels as shown in the accompanying photograph. The floor of the brooder house is cement

so the small wheels serve well. Whenever food is to be distributed it is hauled on the platform, or sand to be placed in the bottom of the hovers, it is carried in the box placed on the platform as shown in the picture. The box has a handle at both ends, making it easy to move. The axles of the cart were made by a local smith from old buggy axles. The tongue is made of a three-quarter-inch rod with a T handle.

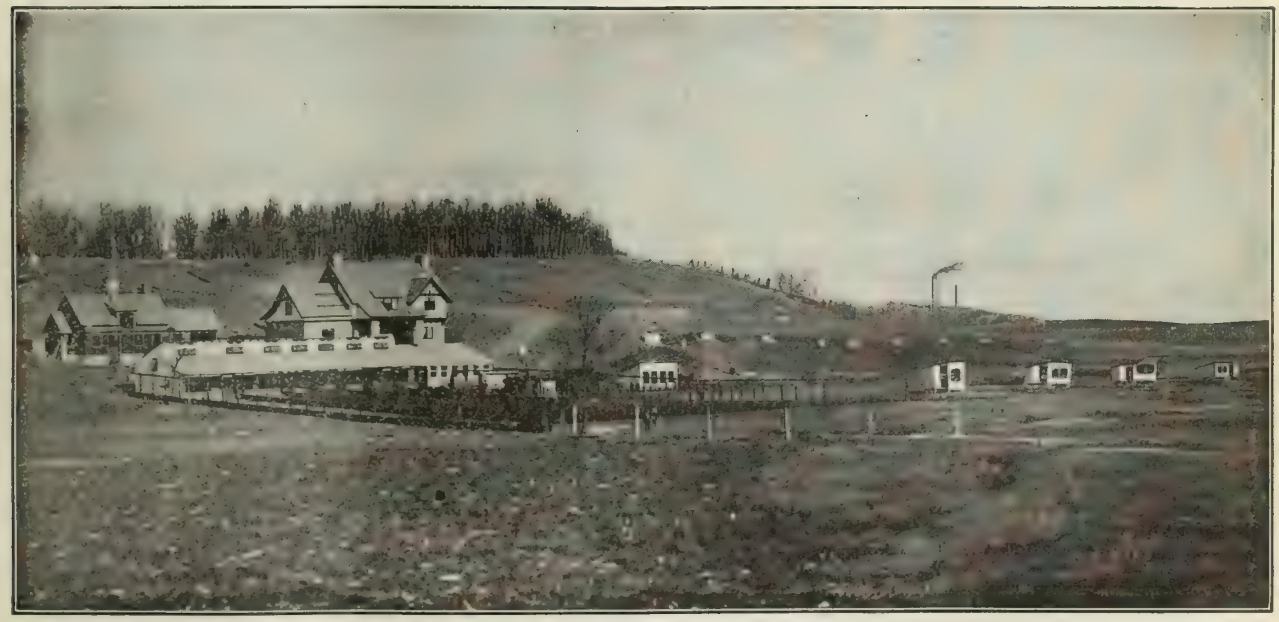
The birds in the laying and rearing houses are fed three times a day. One man makes it his business to do all the feeding and to keep the houses in repair but does none of the cleaning. Mr. Dangers goes with him morning and evening to assist, and in this way is able to keep in close touch with all the work. It would be necessary for him to make a tour of inspection anyway and by combining these with a little work, makes the employment of another man unnecessary.

The second man does all the cleaning and what farm work there is to be done. The farm includes fifty acres but the larger part of this is taken up with buildings and yards. Mr. Dangers attends personally to the feeding of the chicks in the brooder house and regulates the heat. He also takes entire charge of the hatching. With this system of arranging the work, he has found it possible to properly care for the profitable flock of thirteen thousand birds with a minimum salary expense.

Divers Things of Interest to Poultrymen

Instincts of Animals are Blind—Doctrine of Correlation—March of Invention

By H. H. Stoddard, Riviera, Texas



A LOUISIANA correspondent writes as follows:

"One of the most singular freaks in the way of food for fowls was accidentally discovered by a neighbor of mine recently. He is a blacksmith, and his fowls come to the door of his shop. The pieces of a broken pane of glass were lying around. He noticed that the fowls picked up these bits and swallowed them. From this hint he began giving them an occasional feed of pounded glass, and found they ate it with avidity. Is it the practice of any of the poultry raisers to feed pounded glass, and what office does it perform in the animal economy? Does it serve in its slow decomposition as mineral matter, or what other purpose does it serve? Any information upon these points will be interesting. I have been accustomed to keep broken glass out of the way of my hens, lest they should swallow it by accident, and supposed it would certainly poison them, if it did not injure by cutting their crops or gizzards. But the fact above narrated is stubborn. I shall look with interest for the light that will come with your experience."

To the above I make answer that the instincts of animals are blind. It is natural to fowls to swallow gravel, especially white or light colored and very hard gravel. This instinct leads them to eat broken china, glass, shells or anything resembling white gravel. Glass in itself is not poisonous to any animal, for it is simply silex, a form of stone or sand. Broken glass will, however, when swallowed by some species of animals, prove as fatal as the most virulent poison, because of its cutting properties. It is as dangerous as for a dog or horse to swallow needles or lancets and for the same reason. But fowls are often able to swallow sharp steel or glass with impunity. They were made by the celebrated Dr. Spallanzi, experimenter in the field of comparative physiology, to swallow small leaden bullets in which bits of needles and awls had been set, radiating outward like rays of a chestnut burr. After awhile the sharp points of the needles were worn blunt and with no apparent evil results to the birds.

The lining of the gizzard, though thin, soft, flexible and appearing very weak and incapable of resistance, has a wonderful way of rapidly repairing such injuries as it continually receives while the sometimes hard, rough and sharp-cornered contents of the gizzard are jammed against it by vigorous contractions of the thick, powerful muscles of which its outer walls are composed.

Gravel is not absolutely indispensable. Fowls have been kept from time immemorial in districts where not a particle of gravel or coarse sand was in the soil; yet they throve generation after generation, apparently just as well as poultry in gravelly regions. But they are so greedy for it that the safest plan is to have good sharp "grit," as the word is, constantly before them. They crave something solid and when kept on ground grain will pounce eagerly on the same kind of grain unground.

Scene on Old Forge Poultry Farm, Spring Grove, Pa.

Some of the most eminent authorities, including Dr. Woods, who has made very careful and elaborate experiments to discover the true functions of fowls' gizzards, say that there is no real grinding done by the falsely so-called "millstones." That the grit is largely dissolved chemically by the gastric juices and thus furnishes needful mineral food, and also the gravel or sand helps to keep the other contents of the gizzard from forming a tight wad or ball which would not be readily subject to the action of the

First pen Buff Orpington cockerel at Illinois State Show. Owned by A. B. Porter, Box 4, La Salle, Ill.

digestive fluids. As it generally costs very little to supply grit, it is best to have it always accessible anyway, grind or no grind.

In this connection, I want to get in my speak concerning fowls swallowing filth. The grit poultry eat is retained for days, weeks or months, fulfilling its functions in gizzard, nature having in an almost incredible manner provided that while finely ground stuff is allowed to pass out of the gizzard into the bowel, every coarse body that is solid like a pebble, or semi-solid like a partially softened kernel of grain, is denied egress. Yet mere bulk of itself is not made occasion for holding back. If the substance is fibrous or pliable, like oat hulls, for instance, it may pass out. Occasionally, however, in spite of the wonderful vigilance of the unconscious mind that acts as doorkeeper grit sometimes slips by and in due time is voided in the droppings.

Well, now, fowls are everlastingly scratching under their roosts to get at this second-hand grit, and it is swallowed over and over for years till by attrition, combined with the dissolving powers of the digestive juices, it is completely used up. In swallowing the gravel filth is necessarily swallowed. Even if no gravel is there the flies, especially in warm weather, deposit eggs, quickly making the manure full of grubs, which the fowls are ravenously fond of. In my locality at all times of the year, for one reason or another, the droppings are scratched all to flinders.

What then becomes of the doctrine that droppings are poisonous or contain poisonous germs? Even if you shut the fowls away from their roosts all day they will be distributing manure over the yard or outside range, to be scratched to pieces, so there is no escape from the so-called evil. Now I have received a friendly and an intensely earnest letter, since in these pages I recommended hen manure as a valuable and extremely potent fertilizer for rape or other crop to be fed raw to fowls. The writer vigorously denounced such a practice, because in the first place some of the manure might adhere to the green stuff and be swallowed by the fowls. To this I answered that dunghills are predestined to swallow dung anyhow, for dunghill fowls they are, and a little more or less does not matter. They might as well die for a sheep as a lamb.

My correspondent's second objection was that microbes might enter the vegetables and poison fowls that way. On consulting the best authorities I could find, learned that no proof has ever been produced that any microscopic "bug," noxious or otherwise, ever does or can inhabit vegetable sap as its natural home if its nutriment, growth and life history depend upon the animal kingdom.

Doctrine of Correlation.

A great mistake is the matter of correlation of parts. Darwin illustrates this mysterious relation by citing case of "blue-eyed cats." When a kitten appears with blue eyes it is invariably deaf. Why deficiency in the organs of hearing and the color of the pigment of the eyes should have anything to do with each other, or if these traits are both the product of some third unknown factor is "one of the things no fellow can find out," but the fact remains.

The more the laws of correlation of parts are studied in our fowls the more it will be evident that poultry keeping is for the student an intellectual pursuit, and that a lifetime is only long enough to make a beginning in studying fowls. Fanciers, some thirty-five or more years ago, made special effort to reduce the size of combs and wattles on a number of breeds, including particularly Light Brahmas and Single Comb White Leghorns, because they looked too coarse

First prize White Plymouth Rock hen at Universal Exposition, St. Louis. Owned by J. H. Lynch, R. 7, Opdyke, Ill.

and clumsy, it was thought. Whereupon Felch, one of the great poultry pioneers, always as now jealous of injury to utility, to his honor be it said, pointed out the necessity of proceeding very cautiously, since these appendages were of a sexual nature ("secondary sexual characters"), and when large were correlated with unusual procreative powers and fertility of eggs.

In this connection it is worthy of notice that the new-light professors who teach that heredity involves certain

transcendental "principles" (e. g. a principle of size, another of tendency towards fattening, another of growth of feathers on legs, another of prolificness, and so on) almost always insist that these "factors" (that is what they call them) are heritable as separate independent matters. That each has no connection with other traits. For instance, as was pointed out in these columns awhile ago, a certain Ph. D., somewhat tangled up in his own learning, insisted to the effect that a hen, though perfectly formed, perfectly healthy, and perfectly normal as regards anatomy (construction of parts), physiology (action and function of organs), histology (minute structure), and of proper age and growth for laying, also feeding and management in every respect, having always been right from hatching time to maturity, could not lay an egg until some (mysterious and unknown) factor or element of "fecundity" had descended upon the biddy, from heaven knows where, and taken possession. "Entered" into her, I suppose, as a bunch of devils in the puerile fable "entered" the swine that ran down a steep place into the sea.

And just as it was once believed that transcendental "principle of vitality" made an animal body live, whereas it is nowadays known that the vitality does not make the condition and state of the body, but that the body exposed to its environment makes the vitality—all the vitality there is, the name being merely an abstract term for functioning of bodily organs. To illustrate, there is no principle of grindity, or grinding, which makes the mill grind, but it is just the other way, for the mill makes the grinding.

"Trivial distinction, difference between tweedle dum and tweedle de"? No, not at all for the practice of appealing to an imaginary principle, a sort of spiritual element or

"VENUS."

Photo of a prize-winning S. C. Black Minorca female in the yards of Charles G. Pape, Box B-74, Fort Wayne, Ind.

spook as a prime mover to explain occurrences, is a grave error, and one so very grave that it has raised armies, shed blood untold and shaped history of great nations.

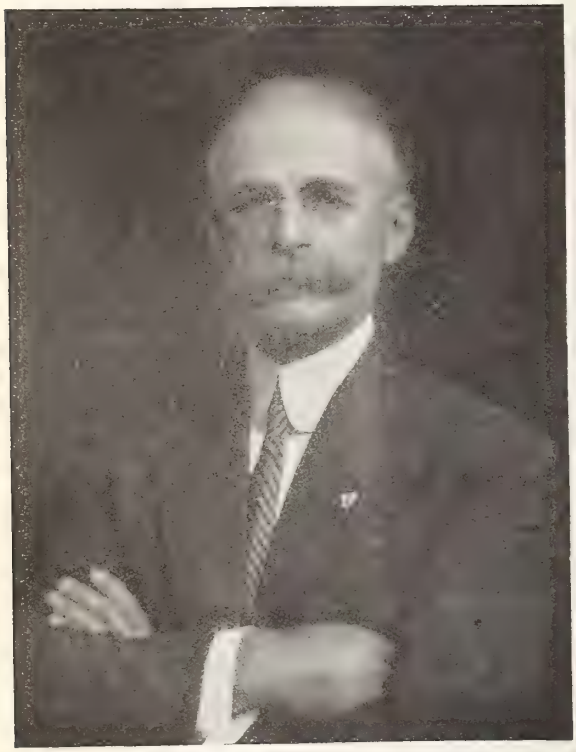
Spookism has been the great curse of the ages. But it is taught today to nearly every child in even the most highly civilized nations as persistently as when Plato taught it, and has become such an ingrained mental habitude that a professor cannot allow a pullet to lay till the spook of fecundity has animated her body.

Speaking above of the new light biologists who for some time contended that the various traits are heritable singly and not in groups, in direct opposition to Darwin with his deaf blue-eyed cats, these would-be progressives are, for some reason, coming around lately. They now say single characters, "or groups of characters" are inherited. And everybody knows that qualities or traits positively are heritable in groups. When a child inherits from parent or grandparent a certain complexion, color of eyes and hair, stature

"JUPITER."

A two-year-old S. C. Black Minorca cock bird that has never been defeated in the show room. Bred and owned by Charles G. Pape, Box B-74, Fort Wayne, Ind.

and bodily configuration generally, we can see plainly enough that said ancestor's temperament, disposition and metal endowments are commonly descended also through correlation.



Special Sorts of Both Spirit and Matter.

The new lights are not content with bringing in a whole lot of spooks to explain heredity, a white spirit to produce whiteness, a black one to make a black color, a spirit of "maleness" (that is the term they use) to create male sex and a spirit of "femaleness" to create female sex, tallness for high stature, chunkiness for low stature, and so on; but they go still further in their demands and descending from the nebulous and vapory realm where any writer may locate any and every sort of spook or eternal "principle" to suit the purposes of his attenuated imagination; they claim also a special sort of matter of which germinal specks and primal life-stuff are composed, and they name it "germplasm." They are not content with allowing the primal embryonic cells to consist of the same plasm that the body cells of the animal consist of. They demand finer clay, or different clay.

Before the discovery that animal's bodies were composed of colonies, or masses of smaller animals, the wise men like Huxley did the best they could. He proclaimed that the "physical basis of life" was protoplasm, a form of matter the simplest that the utmost study could detect. That there was no life to be found in any animal or vegetable except in connection with protoplasm. The prefix "proto" was to indicate that simple plasm, resembling white of egg, was the basis of forms of infinite number and variety comprising everything in both animal and vegetable

kingdoms. The germs of animals, whether fertilized or unfertilized, and the embryos in all stages of growth, and individuals from birth to death consist of protoplasm.

So far Huxley and his co-workers; but later appears Weisman and in pure assumption and nothing else, he teaches that there is a separate sort of matter that generative germs are made of. He calls it "germplasm." This substance is the physical basis of heredity. The swarms of spooks that confer the qualities which are distinctive of the

D. W. YOUNG, MONROE, N. Y.
The man who has made Single Comb White Leghorns famous throughout the world.

variations in our domestic animals are domiciled in this germplasm and not in the protoplasm of which animal's bodies are made. So says Weisman, but he is monumentally mistaken. The cells of the mistakenly called "germplasm," both before and after fertilization, lead separate individual lives, and are like all cells in that they are descended from other cells of the body. And in turn the last named cells lead separate individual lives in series which include descent from the mistakenly called "germplasm" cells. No reason has ever been shown for considering germ cells as belonging to any series apart from the series of body cells.

Now in breeding poultry there would have been no need for any writer attempting to explode the theory of the mythical "germplasm" at all had not modern teachers first entered the field and proclaimed Weismanism. They were drawing salaries from public treasury by teaching science, falsely so-called, which bewildered and misled poultrymen who are trying to cultivate extra laying powers specially by breeding in the male line, and they don't deliver promised goods with the celerity boasted beforehand. Their way is no better than

"The same old plan
Of holding tight
To what you get,
And getting all you can."

The old way is the way Wizard Burbank follows. It is Darwin's way. It is the way which was followed in making the hundreds of breeds of pigeons out of the original wild Rock Pigeon of Britain; in making the scores of breeds of dogs; in bringing Gallus Bankiva from eight eggs in the wild nest to eighty in barbarous ages, and then to 135 or about that, in civilized times, and which will bring them still higher, after awhile, till is reached an equilibrium of nature which will forbid further rise (as a racial trait), though transitory freaks of higher laying will not be forbidden.

The teachers of Weismanism in the poultry world get flattened out so that they do not emit even a faint peep whenever anybody gets after them in earnest. Verily there are scores of important matters waiting to be solved by the experiment stations without their funds being squandered on excursions in cloudland.

It is given to both school boy and philosopher to know that ancestors near and remote make the character of progeny. The how and why this is so no mortal knows anymore than how and why no end or beginning of time or space is conceivable; or how and why the whole of a thing is compelled to be greater than any one of its parts; or why two gases must be combined in a certain proportion to make air and some other proportion would not do just as well. Thank heaven we don't have to know. Merely go straight along about our business and prevent trouble by inventing no mythology, and stumbling over no mythical mare's nests.

March of Invention.

Show any large manufacturer or manager of a department store or other big business how he can save even 3 per cent or less of his labor bill and he will sit up and take notice mighty quick.

Once iron ore was pushed up a ship's gangplank in a wheelbarrow. Later it was lifted a few bushels at a time by means of a horse, ropes and pulleys. Now by touching buttons, a whole big modern carload, car and all, is quickly lifted, swung around and dumped aboard the vessel, with

The "Daddy" of Monmouth Farms' Buff Leghorns. This farm annually produces a large number of prize-winning Buff and White Leghorns and their winning record is well known to our readers. These farms are located at Freneau, N. J.

actually no more effort to the operator than if he inverted a sugar bowl. And so it is everywhere, except in commercial poultry, which is a business so new that labor-saving inventions have not to great extent had time to appear in the field. Does anybody suppose that the production of staple articles of such prodigious quantities and values as market eggs and poultry for the enormous cities of the future, can go on without changes amounting to almost a complete revolution in methods? A new machine is revo-

lutionizing the manufacture of postage stamps. This machine eliminates twenty-three different operations which have hitherto been essential in the work. By its use the incredible number of 12,000 stamps is printed, gummed, perforated, counted and ready for delivery in just one minute. Formerly after the plates had been prepared the services of more than a dozen people were required in making stamps, but with this machine only two are needed. The cost of making stamps is cut down 57 per cent, thus making a saving of $300,000 to $400,000 annually to the government.

Practically four machines, a printing press, a gumming machine, a drying appliance, and a perforating wheel, are combined in this invention. One of the noteworthy features of the new machine is that it takes dry paper fed from the roll, while the old process required the use of sheets which had to be moistened by a complicated process requiring two days.

Another new machine is one which winds the completed stamps into coils for use in coin or slot machines. An increasing part of the stamp output is now sold through such slot machines in drug stores, and other public places. This machine will produce 12,000 coils, of from five hundred to a thousand stamps each, in a day of eight hours. Each of the machines does work for which the services of twenty-two people were formerly required.

Thus it is, all up and down the line. It is as interesting to visit a large manufactory of any staple article nowadays

as it is to attend a theater. No matter how quickly and perfectly a machine works some ingenious Dick is trying to make one that will work still quicker. Are particular parts of a certain machine needed? Then if 50,000 or so of these machines (say auto cars) are to be built, it pays to invent and construct a special machine to make each of such parts. Say there are twenty separate parts to be united in a special model of car of which 50,000 are to be built, then twenty machines of entirely new character are to be studied out, made and installed before the first car, original model not counted, is begun.

Great barns are now being built for dairymen on the convergent plan, the cow stalls being in a circular or octagonal court at the center to facilitate feeding. Cars and grip hooks travel on overhead tracks on the principle of the receptacle which travels overhead to reach the cashier in stores. These traveling appliances not only convey grain and fodder but carry the litter or manure to or from the

stalls. Grain can be conveyed to flocks of 2,000 or more laying fowls each in the same way. What is to hinder?

Quite recently diversification in poultry matters has been shown by the attempt to unite several poultry men in a trust; by the intervention of Uncle Sam to rescue farm eggs from the broad road to perdition; by the employment of poultry movies and lectures and institutes on wheels; by the plans more or less ill-advised to include poultry as part of the public school curriculum; by the division of labor into the separate functions of the professional hatcher, the rearer and the egg raiser; by the development of methods of canning, freezing and drying eggs, also importing them in increased numbers from the orient; by ransacking Belgium and other countries for valuable breeds; by great activity in attempts to find the 200 and 300, or 600 or 1,000 egg hen; by the popularity of the trapnest, automatic feed hoppers and no end of other commercial devices, patented and unpatented now on the market; by the great growth of the A. P. A. in membership; by the application of art in photographing fowls in colors; by the development of poultry periodicals till one number is a book in itself. And now I reach one of the most important development in a half century, which stamps the able, far-seeing Burleson as one of the great lights of the times. Just as the rural route idea was first put in operation tentatively, so the enlarged parcel post is to be tried first at certain localities, to prove that the express business can to advantage be added to the mail business.

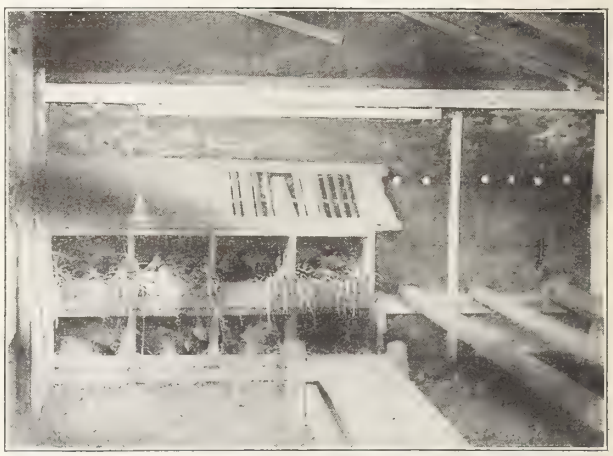
Fred W. C. Almy and Red Feather Farm

Rhode Island Egg Farm that Combines Utility and Fancy and Is Successful With Both

By Prince T. Woods, M. D.

WE have known Fred W. C. Almy, of Tiverton-4-Corners, Rhode Island, for a good many years. As the proprietor of Red Feather Farm and a fancier of Rose and Single Comb Rhode Island Reds, he is classed among the prominent breeders of today, is a factor to be reckoned with at the leading big Eastern shows and his "Sensation" strain is widely known.

It is not our intention to set down a report of his winnings herein, the records will speak for themselves, but we do want to tell something about the man, his plant and his work. Mr. Almy began small and grew. He was a successful utility man and egg farmer before he became known as a fancier and exhibitor. He is still a successful egg farmer as well as a successful fancier. He believes in combining beauty and utility, and he makes it pay. He is a young man, as we reckon ages today, and he is more capable, active and eager for work than many men who have just reached their majority. In the poultry world and on his home farm he is a very "live wire," overflowing with energy, and as conscientious and honest as he is capable.



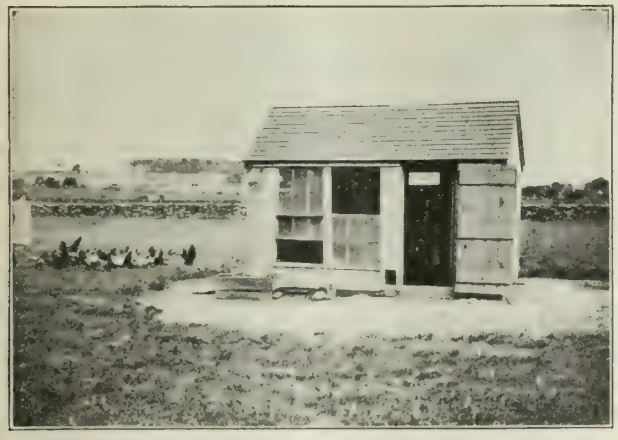
Fred W. C. Almy started in the poultry business about twenty-four years ago. He was then working on his father's farm for his board and with the privilege of "working out" for himself at spare times. The lure of the city attracted him, but on the advice of a friend he decided to stick to the farm and start with poultry. He started with a few hens borrowed from his father, who like most farmers of the district had only a small farm flock, and he became one of the pioneers in the egg farming section which afterward became famous as the "Little Compton district." His first year he

Some of the first built colony houses for breeding and laying stock on Almy's Red Feather Farm, Tiverton-4-Corners, R. I. (Photo by Dr. Woods.)

raised about 60 pullets and built two small houses at a cost of about $10 per building.

The pullets did so well that he decided to go in heavier the next season. At this time he was teaching school to help out his income and he devoted his nights and week ends to doing poultry work and preparing poultry quarters. His second season he had 180 pullets and six more small colony houses. His building operations took more capital than his salary as a teacher and his small flock of layers supplied, and he borrowed $60 from a friend to build poultry houses. His plant grew steadily and all earnings that could be spared from living and operating expenses were put into the development of the growing egg farm. The stock and buildings were increased gradually until Red Feather Farm, as it came to be known, had a capacity of 2,000 layers. It was steady, normal, healthy growth that paid its way as it grew, and for many years now the farm has been well known and supplying the best hotel egg trade in Boston. When the successful egg farm had been firmly established and paying a handsome return, Mr. Almy's attention was turned toward the fancy. Some of the best Red blood in the country was introduced into his original stock, he acquired other breeders' flocks by purchase and his success in the show room won

Interior of colony house on Red Feather Farm, showing seven Standard-bred Reds laying for F. W. C. Almy. (Photo by Dr. Woods.)

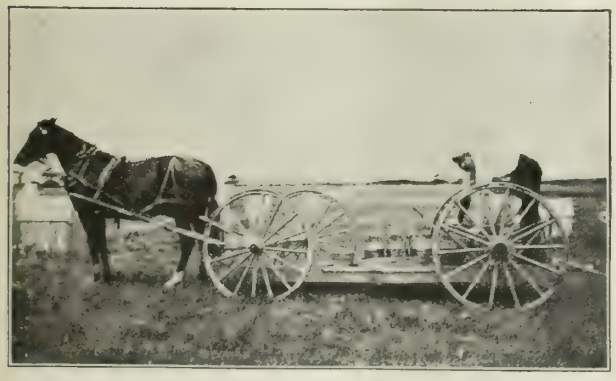


him a place among America's foremost breeders of Rhode Island Reds. He still continues his egg farm, supplying the hotel trade, markets and abundance of surplus stock annually as table fowl, and is selling breeding stock and eggs for hatching throughout the country and abroad.

Red Feather Farm is practically a one man farm. Mr. Almy and a boy helper do all the farm work and take all care of the poultry. He says: "I believe that it is easily possible, after you have built up your trade and reputation, with the help of the proceeds from the sale of winter chicks, surplus cockerels, etc., to clear $2,000 a year on a 2,000-hen plant from the utility side of poultry keeping alone." At the annual Farmers' Institute held in Providence this year he said regarding his present earnings on Red Feather Farm: "After paying my family living expenses last year I made a net profit of slightly over $2,000 from 1,800 to 2,000 hens." And he explained that his chief "secret" is cleanliness in food, pens and yards.

Mr. Almy is a tall, straight, wiry Rhode Islander. He hasn't an ounce of superfluous flesh on him. He works hard, is up early and when at home is usually to bed by ten o'clock in the evening. Active, healthy and a hearty eater himself, he carries the same thing into his poultry keeping. He feeds his flocks abundantly once a day and doesn't waste labor. In addition to the poultry he conducts a comfortable home farm that some folks would think would keep one man busy. He is an enthusiastic baseball fan and one day when we were visiting him he kept us busy following him about his work with hens and chickens, took us for a drive about the poultry-growing district in the afternoon, more farm and poultry work before supper, including the mixing of a big kettle of mash for morning, and then after supper he "passed ball" with us until it was too dark to see and then talked "hen" until bedtime. Next morning he was up and at work again long before we thought about getting up.

Most of the Almy flocks are colony housed and on free range. Special matings are penned and yarded. Breeding stock gets special attention, but the main flock of layers are fed only once a day in a box trough, mash on one side



and mixed grain on the other. The time required for Mr. Almy and a boy to feed 2,000 layers for all day is only one and one-half hours. His egg yield is fine and in January he was gathering over 600 eggs daily. Drinking water, cabbages and mangels are supplied at the same time the feeding

Colony laying house on Red Feather Farm and a flock of Reds. (Photo by Dr. Woods.)

is done. All feed and water is carried on a low slung wagon drawn by one horse.

Some 5,000 or more chicks are grown each year, practically all hen hatched and hen brooded in small colony coops on open range. Incubators are sometimes used to start the eggs until a sufficient number of hens are ready to cover them. After the test the fertile eggs are taken from the incubator and put under hens. Hatches are remarkably good and there is a very low per cent mortality among the growing chicks. The colony brood houses are placed in rows, eight or ten paces apart and about 180 of these coops are scattered about three fields. Twenty-five chickens are placed with a hen in each coop. The hen is confined for two or three weeks and the chicks range. Chicks are fed twice a day, morning and afternoon, on chick food the first week, or a home-made mixture of three parts fine cracked corn, one part cracked wheat, one part coarse bran, with grit. Enough is fed to keep the chicks busy scratching in litter on coop

Fred W. C. Almy on the feed and water wagon in one of the chick growing fields at Red Feather Farm. (Photo by Dr. Woods.)

floor all day long. Water is supplied in an open cast iron dish, about the size of a brick and not quite as deep. These drinking dishes are easily kept clean, can't be tipped over and they last for life.

When the chicks are one week old a little scalded mash is fed at noon, gradually increasing the amount until when two weeks old they get mash morning and noon and cracked corn at night. The morning mash is cooked and is the same that is fed to the layers. The scalded mash is fed at noon and is composed of one part each of bran, cornmeal and cracked corn, with one-eighth part of the whole best beef scraps. The only variation in this ration is to substitute whole corn for cracked corn at night as the birds become mature enough to take it.

When chicks are six to eight weeks old and well feathered out the hens are taken away and the chicks are fed in box troughs placed between each alternate row of coops at such a distance that six flocks will feed at one place. Feeding is done with horse and wagon and Mr. Almy and a boy easily feed and water 3,000 chicks in an hour in the morning and in about thirty minutes at noon. The cracked corn for night feeding is placed in the boxes at noon at the same time as the mash, so that it is not necessary to feed at night. The feed wagon enters the fields at different points, alternate feeding times, so that chicks do not know from what point it is coming and do not crowd and congregate to meet it at any given point. They soon learn that it pays to stick

Hustling with the chick mash on range at Red Feather Farm. Mr. Almy was caught in the act by Dr. Woods, who with his camera was close by the feed wagon.

about near the home feed trough if they want a full meal.

Chickens and mother hens are powdered well with Persian insect powder to insure freedom from lice at the time they are placed in the coops. The brood hens are powdered twice during the sitting period. When chicks are two weeks old each mother hen is oiled with a little sperm oil under the wings just at dusk. This oils the heads of the chicks when they go to bed for the night and destroys any lice missed by the insect powder. No further precautions against lice are taken.

Pullets when housed are fed liberally but are never forced. The laying ration consists of cooked mash, cooked over night in a big iron kettle set in a wood burning stove. The mash is mixed with a long, iron-shod handled shovel and it is some stunt for even a husky man to stir it well. Cooked mash

Unretouched photo of first prize Buff Wyandotte cockerel at Madison Square Garden, December, 1913. Bred and owned by W. F. Schultz, Cuyahoga Falls, Ohio.

varies according to season. In winter it is generally two parts cut-clover, three parts cracked corn, including a little corn meal, four parts bran with a little oil meal, bone meal, salt and charcoal. About one-sixth part of the bulk of

mash is good beef scraps. Sometimes cooked fresh fish is added to the mash, especially for the growing chicks. This is only to be had at times from the fisheries at Tiverton. The hard grain mixture is usually about six parts corn, one part oats, one part barley and one part wheat. Both whole and cracked corn are used. This is winter mixture; in summer more oats and barley are fed and less corn. The mixture is varied according to the appetites of the fowls and they get the most of the grain they seem most eager for. In chicken time it takes from 12 to 15 bushels of feed daily to keep the flocks supplied.

Red Feather Farm annually raises about 1,000 winter chickens as a side issue. These are hatched in December and sell as early roasters at from 30 to 33 cents a pound. All market eggs are sold at best retail prices in wholesale lots f. o. b. farm and are taken to Tiverton Station by stage. They go to the best hotel trade in Boston.

The hatching egg trade calls for over 30,000 eggs each spring, with several thousands more later in the season and many of Red Feather Farm's customers repeat, coming back year after year for more stock and eggs. The fancy end of the business has assumed considerable proportions and Mr. Almy is an advertiser of some prominence in the leading journals. He continues to combine utility and beauty in Reds and we believe he always will.

His advice to beginners is: "Deal always on the square. If he does this no man need to hesitate to embark in the poultry business. I do not mean that you shouldn't 'go in all over,' but that you should go slow, and start with a few. Learn the business as you go along, build up your plant and your reputation together and your markets with good profits will be sure to follow."

That should be good advice, for that is what Fred W. C. Almy did and that is his secret of success when combined with his remarkable energy and capacity for work.

Third National Egg-Laying Contest

A Flock of 1,000 Hens Average Twenty Eggs Each in March—English Pen of S. C. White Leghorns Breaks All Previous Records

By T. E. Quisenberry

HENS which lay 1,000 eggs in a lifetime are quite rare. Some hens live to be fifteen to twenty years old, but very few of them lay many eggs after the third year. We have a White Plymouth Rock hen at this experiment station which will soon be approaching the 1,000 egg mark if she continues to lay. She is still in good health, and after moulting began to lay again in January. She laid ten eggs in January, two in February and eleven in March, and is in her seventh year. Several years ago we had another White Plymouth Rock hen which won from two to four blue ribbons in good shows each year from a pullet until she was eight years old, and also made a good egg record each year. She laid an egg the day before her death when in her eighth year. Dr. Sanborn, of Massachusetts, just reports a Buff Wyandotte hen which laid 1,002 eggs in seven years. I would much rather have hens like these in my flock and much rather breed from hens like these than to have a flock of hens whose race was soon run, which are like a flash in the pan, and which make a good record for a few months or for a year and then because of lack of vitality are unable to stand the strain of heavy production, break down and die or become useless and practically non-productive.

The day a chick leaves the shell, it is endowed with all the yolks, or ova, or eggs, that it can ever lay, and several thousand more. Nearly every chick's body possesses several thousand of these tiny yolks, and it is possible to count as many as several thousand in practically every pullet. No amount of feeding, no system of housing, no method of care and management, however good it may be, will add one more yolk to the number already provided by nature. The method of breeding, feeding, housing and care determines largely the number of tiny yolks which any hen will be able to ripen or develop into full-sized yolks and manufacture into the finished product.

Breeding has more influence over this than any other one thing, and don't ever get this idea that you feed a hen to feed yolks and eggs into her body. You feed her for the purpose of enabling her to develop the yolks which nature and breeding have already provided and made possible.

Man has taken the jungle fowl, which only laid a few eggs per year, but was of longer life than our domestic fowl of today, and he has bred and improved the wild fowl until we now have hens laying 300 eggs in a year and 1,000 eggs in a lifetime of only a few years. Nature never intended that any hen lay 200 or 300 eggs in a year, and then by increasing production to many times what the wild fowl laid annually, man has shortened the life and in most cases has decreased the vitality from that of the original fowl. Modern methods have not only increased the production of a lifetime, but we are also forcing the overworked hen to deliver her fifteen or twenty years' supply in two or three years, as a rule.

The question of the young chick and growing stock is now uppermost in our minds. If you have not already hatched all you need, then get busy. May and June hatched chicks often develop into the best show birds, and often make good layers.

Feeding Young Chicks.

We sprinkle a little clover chaff, shredded alfalfa, fine cut straw or clean litter, free from must and mold, over the floor of the brooder or hover before the chicks are placed in it. We provide a small fountain of sour milk or buttermilk for at least the first half of the day, and water may be provided for the last half. If you cannot get the milk, then see that pure water is always before them. We prefer sour milk to the use of sweet milk for the reason that much of the bacteria which we find in the intestinal tract cannot grow and develop in sour milk or buttermilk; but sweet milk hasn't this same effect. The acid of milk aids digestion, kills bacteria, and has an appetizing effect. The chicks are not fed for forty-eight hours or more after they are hatched. Don't feed too soon. Give the chicks time to assimilate the yolk of the egg which contains enough food to last them several days.

Begin by feeding a mixture of two-thirds rolled oats and one-third wheat bran, mixed with a small amount of charcoal. Oatmeal is the finest food known to give young animals. This is fed on a clean board or paper four or five times a day and only a small quantity fed at a time. We remove the feeding board after the chicks are through eating. Clean, coarse sand or fine grit is given about the time the first feed is given, and no grit is given before. After the chicks are four days old and you have been feeding them rolled oats and bran for a day or two, we begin to add a little commercial chick feed to the above mixture, and gradually increase this until the rolled oats and bran are eliminated from the first or grain feed. The rolled oats and bran are fed morning, noon and night, and a good grade of commercial chick feed is thrown into the litter between meals. This compels the little fellows to exercise, and they soon begin to scratch as vigorously as if they had been at it for many weeks. You can almost see them grow and develop, and become active and husky. At the age of four or five days begin to feed a dry mash made as follows:

Two parts wheat bran.
One part cornmeal.
One part shorts.
One-half part rolled oats or oatmeal.

To every hundred pounds of the above mixture, we add a handful of charcoal, a handful of bone meal, and a half pound of fine table salt, mixing it thoroughly.

When the chicks are about six weeks old their ration of chick feed and rolled oats can be gradually changed to cracked corn, wheat and kaffir corn. Continue the dry mash. Look out for lice and mites. Keep the chicks dry. Sour milk used for the

start will check white diarrhea. Get the chicks into colony houses and on free range and fresh ground as soon as possible. Feed them from hoppers. They will grow faster and do better as a rule. The average amateur doesn't know as much about feeding as the chicks themselves. Let the grain food for the growing stock be composed principally of equal parts of cracked corn and wheat fed in hoppers. Feed the dry mash in the same way. Give a moistened mash to the growing stock once each day. We have had a number of cockerels fed in this way that developed so rapidly that they were crowing vigorously when seven weeks old.

The hens in the contest laid 19,630 eggs in March, or an average of nearly twenty eggs per hen. This makes a grand total of 49,369 eggs for the past four months, or an average of 47½ eggs per hen for that time for all hens, good bad and indifferent. The pen of S. C. White Leghorns from England again broke the record for March or any single month's record for the past three contests. They laid 257 eggs in March, or an average of nearly twenty-six eggs per hen in thirty-one days, which was the highest record ever made by a single pen in a single month. The fewest eggs laid by any hen in the pen in March was twenty-four eggs. They have nearly reached the 900-egg mark in four months.

The best individual records made thus far have been made by a White Wyandotte pullet from Pennsylvania and a Black Rhinelander pullet imported from Germany, each having laid 99 eggs in four months.

The best pen records made thus far by representatives from the different countries are as follows:

	Eggs
S. C. White Leghorns made best English record	867
S. C. Reds made best United States record	711
S. C. Reds made best Missouri record	711
S. C. White Leghorns made best New Zealand record	551
S. C. White Leghorns made best Australian record	452
S. C. White Leghorns made best Vancouver Island record	520
White Wyandottes made best Ontario record	528
S. C. White Leghorns made best British Columbia record	504
S. C. White Leghorns made best South African record	395

Seven hens in the contest have never laid an egg. One hen went totally blind in a few weeks after she arrived here. I don't mean that she lost her eyes by roup or anything of that kind, but she simply lost her sight. Perhaps the starvation and suffering and effects of the hard trip enroute had something to do with becoming totally blind. We discovered that her eyesight was gone and it seemed that she would almost starve before we could teach her to eat and drink of her own accord. We fed and watered her for a time. But today she is laying and is in perfect health and has now learned the way about her pen so that she gets along about as well as a normal hen. She never goes on the roost but she knows where to find her nest, feed and water. She is kept in a pen to herself. In moving about she always turns to the right. She is in apparently good health, and we believe she will continue to lay. She is from pen six and her name is Helen Keller. As she is now acquainted with her pen, we believe we can keep her with as little trouble as any other hen.

The highest averages have been made by the following varieties:

All Buff Orpingtons have averaged, per hen	62 eggs
All Buff Leghorns have averaged, per hen	61½ eggs
All R. C. Reds have averaged, per hen	60½ eggs
All Anconas have averaged, per hen	60 eggs
All Silver Wyandottes have averaged, per hen	55⅓ eggs
All S. C. Reds have averaged, per hen	53 eggs
All Buff Plymouth Rocks have averaged per hen	53 eggs
All S. C. White Leghorns have averaged, per hen	42½ eggs

but the average was cut down by a few pens being out of condition. No variety has made a very low average. Several pens laid more eggs in March than in all previous three months combined. Nearly half the pens in the contest laid over 200 eggs each in March.

National Laying Contest.

The 600 hens in this section of the experiment laid 12,291 eggs in March, or an average of 20½ eggs each.

Many changes took place in March because of broodiness, and other things which will arise from time to time; we expect to see many pens which are now far down the list among the leaders before the close. The ten highest pen records in this section of the contest are as follows:

Pen 0	S. C. White Leghorns, England	867 eggs
Pen 47	S. C. Reds, Missouri	711 eggs
Pen 18	White Wyandottes, Pennsylvania	710 eggs
Pen 36	Buff Orpingtons, Texas	694 eggs
Pen 5	Anconas, Missouri	660 eggs
Pen 53	Barred Plymouth Rocks, Illinois	647 eggs
Pen 38	White Orpingtons, Pennsylvania	642 eggs
Pen 55	Buff Plymouth Rocks, Pennsylvania	636 eggs
Pen 1	Buff Leghorns, Missouri	635 eggs
Pen 34	White Orpingtons, Ohio	633 eggs

White Wyandotte hen No. 0 from pen 18, Pennsylvania, and Black Rhinelander hen No. 8 from pen 11, California, have made the highest individual records, each laying 99 eggs.

National S. C. White Leghorn Contest.

These hens have laid 4,839 eggs in March, or an average of over 17 eggs each.

From the 5th to the 10th of March these hens began to lay with a vengeance. They are now making higher daily averages than any other section of the contest. We have no doubt but that it will continue as the heavier breeds will now go broody. We never saw a finer lot of Leghorn hens assembled at one place than these hens in the contest. The ten highest pens for the four months are as follows:

Pen 79	S. C. White Leghorns, Pennsylvania	623 eggs
Pen 70	S. C. White Leghorns, Missouri	555 eggs
Pen 65	S. C. White Leghorns, Missouri	553 eggs
Pen 77	S. C. White Leghorns, Vancouver Island	520 eggs
Pen 64	S. C. White Leghorns, British Columbia	504 eggs
Pen 71	S. C. White Leghorns, Missouri	504 eggs
Pen 61	S. C. White Leghorns, Nebraska	493 eggs

COLUMBIAN WYANDOTTES

Three first prize winners at the Boston, 1914, including 1st cock, 1st cockerel and 1st pen cock. Bred and owned by James E. Perkins, 513 Canton St., West Stoughton, Mass.

Pen 69	S. C. White Leghorns, Kentucky	471 eggs
Pen 72	S. C. White Leghorns, Iowa	446 eggs
Pen 67	S. C. White Leghorns, Missouri	433 eggs

S. C. White Leghorn hen No. 3 in pen 65, Missouri, has made the highest record for four months by laying 86 eggs to date.

National Utility Contest.

Some of the pens in this experiment have done extra well, others have made very poor records. We cannot understand the trouble or why the difference. The 160 hens laid 2,500 eggs in March or an average of a little less than 16 eggs each. The production was a little over 50%. It is not bad, but we hope to materially increase that this next month. The ten highest pens are as follows:

Pen 92	S. C. Reds, Pennsylvania	596 eggs
Pen 86	Barred Plymouth Rocks, Michigan	544 eggs
Pen 85	Barred Plymouth Rocks, Texas	482 eggs
Pen 94	S. C. Reds, Ohio	441 eggs
Pen 95	S. C. Reds, New Hampshire	433 eggs
Pen 88	White Orpingtons, Kentucky	432 eggs
Pen 93	S. C. Reds, New York	409 eggs
Pen 99	White Wyandottes, Arkansas	387 eggs
Pen 90	White Orpingtons, Missouri	381 eggs
Pen 89	White Orpingtons, Missouri	376 eggs

S. C. Red hen No. 9, pen 92, from Pennsylvania, has made the highest individual record with 81 eggs to her credit.

Poultryman's Practical Dispensatory

Discussion of Sulphur, Iron and Potash and Their Application in the Treatment of Poultry Diseases

By J. H. Petherbridge

SEVERAL months ago a well-known poultryman suggested to me that a series of practical articles on drugs in frequent or occasional use in the poultry yard would be of great value, if written with a view of everyday helpfulness to poultrymen.

It detracts nothing from the general utility of such a series for some to say that "No drugs are needed in the poultry yard," quote "prevention is better than cure," or assert that "the only cure worth while is a sharp hatchet."

In this matter we face "a condition and not a theory." Drugs *are* employed and will continue to be given and used by poultrymen even after Mexico has ceased to be a question. If by taking up these drugs, one by one, we are able to offer something that will decrease, by ever so little, their ignorant or harmful employment and point out safe and sane methods of availing ourselves of their real virtues, the writer will feel that he has not written in vain, though it should be demonstrated that his title is too ambitious. Before, however, taking up the drugs I have selected for my first elucidation, it is only fair to my readers and myself to outline the premises I assume to build up any argument I may make or advice I may offer.

As I do not favor "combinations" where a single drug will give the desired result, my opening offerings will be devoted to the "elements" sulphur, iron and potash.

I depreciate the employment of "cruel" remedies; if you imagine no humane treatment will reach the trouble, don't torture them to death. Always keep a sharp hatchet in your medicine closet. I loath to recommend *a poisonous* drug, of either mineral or vegetable origin, for use with poultry, and believe in 90 per cent of ills it is ill advised.

In "doctoring" poultry, my adaptation of the Golden Rule is to give them, or use on or about them, nothing you would hesitate to take or use on yourself or in your family for *like ills and injuries.* Yes, I believe that every poultry ill has its counterpart in the human family, not even excepting scaly-leg and vermin. Fortunately for the poultry industry, the converse is not true (as yet), but intensive culture and artificial environment, if further persisted in and exploited, will sooner or later develop those human ills in our hens they are now spared; we may yet be operating on them for appendicitis.

When I speak of a drug being a "tonic," I must not be misunderstood as saying that any tonic will atone for inherited lack of vigor. Or if I have occasion to refer to a drug as "stimulating," I do not mean that a stimulant will take the place of good food, well balanced, and seasoned with pure water, fresh air, sunshine and exercise. And I desire you to bear in mind that no drug has the power to cure without the coöperation of care, cleanliness and common sense. And finally I desire to emphasize that in my recommendations of treatment and dosage, I will refer only to adult fowls and maturing stock. Baby chicks should need no medicine or treatment, save for lice and injuries.

Sulphur.

No mineral is more widely diffused throughout Nature than sulphur. In volcanic deposits it is found in its purest state and called "native," though it is also abundant in combination with the ores of copper, lead and antimony, wherever these ores are found. Sulphur is also present in the animal and vegetable kingdoms. Among vegetables, the mustard and other cruciform plants show the greatest content of sulphur and the disagreeable odor of some plants, as garlic and asafoetida, is attributed to the sulphur they contain.

The discoloration of the silver spoon with which you eat your breakfast eggs is caused by the sulphur in the eggs, and if one happens to prove "bad" in the breaking it is the sulphur in the form of sulphureted hydrogen that salutes and outrages your olfactory nerves and takes away your appetite for that particular meal. A combination of crude sulphur, oxygen and water gives us sulphuric acid, invaluable in the arts and industries of the world. Sulphur is also in active demand for the manufacture of gunpowder, fireworks, in vulcanizing rubber, bleaching, and in combination with lime has grown almost indispensable as a spraying insecticide and fungus destroyer.

The form of sulphur best adapted for use by poultrymen is known as the "flowers of sulphur,"—a fine, yellow powder, having a slight characteristic odor and faintly acid to the taste. It is insoluble in water, but soluble in alkaline solutions, petroleum, turpentine, alcohol and others. Takes fire at a temperature of 300 F. and burns with a blue flame, combining with the oxygen of the air to form a vapor fatal to all living organisms if burned in a closed room.

There is no surer way of killing the red mite than burning sulphur in a tightly closed house, but instead of sprinkling the powder on hot coals in a pan, I advise buying the sulphur candle, if procurable, as far safer for fumigation. But do not bid biddie back to her coop, after fumigating with sulphur fumes, until you have thoroughly aired the house.

Before leaving the "house" allow me to suggest that the next time you renew the dusting boxes, you mix with the "dust" in each box 3 or 4 ounces of sulphur.

Medical properties.—Sulphur is a laxative and diaphoretic,—that is, it is a mild cathartic and induces abundant perspiration. It is supposed to be rendered soluble by the soda of the bile. It is also carried into the circulation by the fatty matters in the alimentary canal. It evidently passes off by the pores of the skin, as is shown by the fact that silver carried in the pocket of one taking sulphur becomes blackened.

Medical value in the poultry yard.—The elder generation of my readers can recall the customary spring dosing of sulphur and molasses to every member of the family and if any dodged the morning dope, it was not the kids. It wasn't exactly peaches and cream to the taste, but it was "good medicine" for a general spring cleaning, not infrequently needed, after a winter's diet of buckwheat cakes and sausage.

To our mind this conveys a lesson of a possible poultry need after a winter of confinement and heavy feeding for eggs. As spring approaches, add to each quart of your dry or moistened mash a heaping teaspoonful of surphur; mix thoroughly and repeat two or three times a week for a month.

When your birds have free range and lots of it, the addition of sulphur to their mash is superfluous, as they obtain this element from the greens they select and eat, but an occasional addition to their feed through the winter months is desirable, as well as the spring treatment.

Out of the southland, where chicken-pox or, as locally known, "sorehead" is almost epidemic in the fall, there has come of late a preventative treatment for this nasty disease, so often reiterated and substantiated, that it cannot be ignored. The treatment is as follows: About the first of July, once a week dissolve a tablespoonful of epsom salts in warm water and with it moisten enough mash for a dozen chickens; every third day also add the same quantity of sulphur to their mash and keep up this alternate treatment until the first of October.

I confess my training and experience gives me no clue as to *why* or *how* this treatment makes the flock immune from chicken-pox, but some things we only know by the results and cannot trace the processes by which said results are obtained. If a three months' course of salts and sulphur will prevent a visitation of chicken-pox, it is cheaper to accept the fact than question the theory.

Northern poultrymen will do well to try it out, for this disease is growing more and more prevalent in all the Northern States.

The Cost.—"Flowers of sulphur" is inexpensive. It can be bought by the barrel for less than 3c a pound. When you go to the drug store for it, don't ask for "5c or 10c worth," but buy it *by the pound.* It should not cost you over 10c per pound, but if you *ask* for "10c worth" you are not likely to get more

than four ounces. No, I am not insinuating that the druggist is dishonest; I am only, as a former druggist, putting you wise as to how to ask for and buy the cheaper drugs. As for honesty and fair dealing, the average druggist will not suffer in a comparison between him and the average poultryman.

The most abundant and useful of all metals is iron. A nation's progress in civilization can be fairly guaged by the amount of iron it uses. Universally diffused throughout the mineral kingdom and an important element in vegetable and animal economies.

In the animal economy iron is an essential constituent of the red corpuscles of the blood; in anaemia the blood is deficient in iron not because there exists less iron in the red corpuscles but because where there is anaemia there are fewer red corpuscles. One of the reasons why it is necessary to supply out "shut-in" fowls with an abundance of "greens" is the bird's need of the *mineral salts* the vegetables afford in an easily assimilated form. And chief among these minerals is iron. Greens particularly valuable for their iron content are lettuce, spinach and freshly cut alfalfa and clover.

Iron is one of the few metals which are not deleterious to the animal economy. It is preëminently a tonic in run-down conditions and blood impoverishment from any cause. It should not, however, be given to fowls suffering from any inflammatory diseases, as it excites the circulation and will increase the fever, thirst and difficulty in breathing.

Preparations of iron, available and desirable with poultry.—The practical question arises—which of the preparations of iron are best adapted to promote the formation of the red content of the blood, are most easily assimilated, readily obtained and inexpensive? Probably the most easily assimilated is metallic iron, or as known in the drug store, reduced iron or iron by hydrogen, administered with the food and not on an empty stomach. Dose to an adult fowl, one to three grains, twice a day in the form of a pill or powder.

This "reduced iron" yields the largest proportion of iron to the gastric juices, but there are two serious objections to its employment by poultrymen,—first, the labor and time required for the preparation and individual administration and, second, the difficulty, owing to its liability to oxidation and consequent deterioration, of buying a really good article of reduced iron and keeping it so. If, however, the poultryman has only a few birds that need treatment and he can procure from his druggist 3 grain pills of the carbonate of iron (Blaud's pills), made by a reputable manufacturing pharmaceutical house, we would advise purchasing a hundred pill package and giving each bird one pill a day. One hundred pills can be purchased for 25c. Probably, though, the preparation of iron that is most desirable for the poultryman's medicine closet, convenient, safe, active and inexpensive, is the tincture known as the tincture of the chloride or muriate of iron, or more often simply as the "tincture of iron," and obtainable in any drug store for from 5c to 10c per ounce. It is one of the most active and certain preparations of iron and can be given in the drinking water.

Anaemia, which is a condition of the blood, characterized by lightness of color, loss of albumen and fewer than normal red corpuscles, evidence of which condition is shown by a light red or yellow comb and wattles, listlessness, poor appetite and failure to make normal growth or flesh. Fortunately anaemia is no longer common, owing to better care, and the knowledge that air and sunshine in sanitary surroundings are essential to the fowl's health. A teaspoonful of tincture of iron should be added to a pint of their drinking water and this should be continued for several weeks, gradually reducing the amount of iron given. To enumerate other or all diseases of poultry in which the administration of iron may be helpful is beyond the purpose of this article and superfluous, if you but keep in mind that iron is emphatically a *tonic.* It is useful after all debilitating disorders to "tone up" the system through the circulation. In using sulphur in the mash as indicated in our former letter, we esteem it a very desirable assistant to the sulphur to occasionally add a teaspoonful of tincture of iron to the drinking water.

Caution.—Do not mix or combine tincture of iron with any vegetable tincture, for the iron will be thrown down in the shape of insoluble tannates. We consider this caution necessary, for we frequently see recommended in the disease department of poultry journals the use of iron with nux vomica and even belladonna, and as those are drugs of high potency, such combinations are peculiarly dangerous.

Do not attempt to give your fowls a course of iron treatment by placing iron nails or filings in their drinking fountains; the resultant yellowish-brown deposit on bottom and sides of vessel is only rust and adds no medicinal value to the water.

Do not imagine that by dissolving copperas (the impure sulphate of iron) in their drinking water you are giving them an iron tonic. When iron is combined with a mineral acid, such as sulphur, phosphorous, etc., the best authorities claim that *the combination adds no iron to the blood but acts solely as an astringent.* Copperas is by no means a safe internal remedy for poultry; in solution in water it is a powerful disinfectant and arrester of decomposition, but even in this connection, it is considered to be of but feeble value as a germicide.

Our interest was recently aroused by an article appearing in a well-known and widely circulated farm journal, giving a highly endorsed (by the correspondent) formula for an egg-laying compound. The principal ingredient was copperas with generous additions of venetian red and cayenne pepper and smaller portions of blue vitriol and saltpetre. If his birds didn't lay more eggs on that "seasoning," they should have shelled out a few bombs of "red fire."

Without potassium and its numerous and invaluable salts, the world of industry, the arts and the medical practitioner would indeed be at a loss.

As we pass in review these and other preparations of potassium with the view of their recomendation for use in the "doctoring" of poultry, we find that we cannot conscientiously name but one or two whose therapeutic value cannot be as well and more economically obtained *by other agents.*

Cream of tartar is a mild saline cathartic and Rochelle salts (a tartrate of potash and soda) is also a cathartic of somewhat more vigorous action, but if you have occasion to use a laxative or cathartic for your birds, *Epsom salts* will *cost you less* and give equally good results.

We have at sundry times in various poultry publications noted the advising of iodide of potash for rheumatism; it doubtless is good, if the treatment is sufficiently prolonged, but in view of *its cost* and the fact that rheumatic conditions can only exist or be developed under conditions of neglect or improper housing, the best remedy is to locate and correct the error.

The chlorate of potash either alone or mixed with sulphur is sometimes recommended to be dusted into the throat in inflammatory, cankerous and diphtheritic disorders and without question the action of these drugs on such surfaces is very efficient, but we think the better way of applying the chlorate would be to dissolve one part in ten parts of glycerine and swab it on the diseased membrane. *And it is a safe rule to never mix the chlorate of potash with any other drug. Adhere to this rule and you will never invite an explosion.*

Permanganate of Potash.

In visiting the poultry yards of the country it is surprising to see so many fowl being served with *pink tea* in place of pure, sparkling, fresh, clean water. In reading the advice tendered in the poultry press, considering the many diseases and conditions for which a solution of permanganate is recommended as a specific and cure, one is fain to infer that for poultry it is the "elixir of life." Owing to its popularity and its widespread use, it requires some moral courage to throw a doubt on its efficiency.

In the writer's opinion, *permanganate of potash is the most overrated drug in use by poultrymen.* In consequence of the facility with which it parts with its oxygen, it is a powerful oxidizing agent, but as *it can yield up only the oxygen within it,* its powers are limited even in this field. It is efficient as a disinfectant in lessening and destroying fetid odors from organic substances.

It may be kept indefinitely, *if pure,* and can be fully secured from contact with organic substances or other decomposing agents, but, in fact, in consequence of the almost universal presence of organic matter *in the air,* it is generally partially decomposed when purchased or in ordinary handling becomes so.

It can have but little value *as an internal remedy,* given through the medium of the drinking water, for even allowing that exposure to the air has not affected it, *the saliva of the mouth and the secretions of the gullet and stomach will decompose it before it can be absorbed.*

EDITORIAL

WE LEAD OTHERS FOLLOW

65,000 A. P. J.'s for May, 1914.

State of Illinois, County of Cook, ss.:
G. M. Atwell, president of the Atwell Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding 65,000 copies of the May, 1914, issue.

G. M. ATWELL.

Subscribed and sworn to before me this 21st day of April, 1914.
(Seal) HENRY G. EISERT, Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

AMERICAN POULTRY JOURNAL

TRADE MARK REGISTERED, NO. 74,059.
Issued the first of each month.
Published by

American Poultry Journal Pub. Co.

JAS. W. BELL, President.
542 So. Dearborn St., Chicago, Ill.

JAS. W. BELL, Editor.
CLARENCE WARD, Assistant Editor.

L. A. STAHMER, Artist.

PRINCE T. WOODS, M. D., Managing Editor, Silver Lake, Plymouth Co., Mass.

HELEN T. WOODS, Editor Woman's Dept., Silver Lake, Plymouth Co., Mass.

H. H. STODDARD, Riviera, Tex., Associate Editor.

H. P. SCHWAB, Eastern Representative, Irondequoit, New York.
H. H. COBURN, Central Representative, Marysville, Mich.
E. J. W. DEITZ, Special Advertising Representative, Chicago, Illinois.

SUBSCRIPTION PRICE.

United States and Mexico, 1 year, $1.00; 3 years, $2.00.
10 cents a copy of all newsdealers.
Canada, 1 year, $1.25; 3 years, $2.75.
Foreign, 1 year, $1.50; 3 years, $3.50.

Look at the address on your wrapper. See that it is absolutely correct and notify us of any mistake, no matter how slight. Note the expiration date which appears thereon, as American Poultry Journal stops with the issue marked on your wrapper.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

1914 Year Book Now Ready.

AFTER working hard all winter and the expenditure of many thousands of dollars, the editors of the great American Poultry Journal Year Book for 1914, are pleased to announce that it is now completed and ready for mailing. It has been a gigantic task to publish this book, but we believe our "Billion Dollar Poultry Industry" is entitled to a representative book of this character published in its interests. This book undoubtedly contains more information on the poultry industry of this country than any other of like character ever before published. Its contents are so large and varied (covering every branch and part of the industry) that space will not permit enumerating them here. But a full page advertisement will be found on page 774 of this issue of the Journal which will give an idea of the great volume of information the book contains.

Turn to page 774 now and read about the great American Poultry Journal Year Book for 1914 and then send for it today.

The Chick Growing Contest.

IN April A. P. J., page 653, we announced a Chick Growing Contest, in which we offer Fifty Dollars in Cash Prizes. Full details of this contest were printed in that announcement and will be found elsewhere in this issue. (See page 778.)

We have had a very gratifying number of readers ask to have their names entered in this contest. There is still time to enter, if you wish. It is a grand opportunity to do a little work that will help to boost your favorite variety. Photographs of growing chicks of your variety and a little story of how they grew and what the weights were, is certain to stimulate a lot of interest. We want your entry. You owe it to your favorite fowls to do your share.

Look up the Contest announcement in this issue and send in your entry today. There are ten cash prizes, and you may win one of them. If you don't win a prize, good pictures of growing chicks of your variety will help to advertise you and your favorites. It is well worth the effort. Get into the Contest and show what you can do.

Several who have entered ask how many chicks we want in the photo groups. That is up to you. Try to get a good picture that shows up the chicks well, and don't have them too crowded. What you want to do is to show off the chicks to best advantage. It is to your advantage to make the best showing you can.

Be sure to enter the A. P. J. Chick Growing Contest and try to win one of the prizes. Look up the announcement now.

Censoring Advertising.

AMERICAN Poultry Association has announced its intention to appoint a committee to censor advertising and endeavor to compel the elimination of misleading statements in poultry advertisements.

It will be interesting to see how this works out. Apparently the buying public has come to expect extravagant statements in ads. and unless the claims are boldly and even extraordinarily made, the buyer's attention wanders to the more golden promises. In view of the character of advertising in all lines of business, the fact that opinions vary widely, and that there is still to be discovered a breed, a cure-all, or an article of poultry equipment that fails to secure endorsement and testimonials from prominent members of the poultry fraternity, we wonder where and how the line is to be drawn when it comes to ad. censorship.

The following quotations were taken from the April advertisements of men who stand high in the poultry world. We wonder if the proposed committee would find these statements misleading.

"The only breed that stands up to the 100% as a market proposition. The only breed that can answer 'present' when the name utility is called. The only breed that can produce meat and eggs in abundance." (Is there any breed that can prove its claim as the "only breed" having such merits? As a matter of fact, the breed for which these claims are made is comparatively new in this country. It has not been proved up in a practical way and it is almost unknown to utility breeders and "meat and egg" producers. Further, there are a number of good breeds that can answer present to the call of utility and that produce meat and eggs in abundance. Ed. A. P. J.)

In half a dozen ads. of the same variety we found the statement: "More first prizes than all other competitors." It might be difficult for each of the six to prove his claim.

A utility breeder of prominence, though we do not recall his ever winning at a big show, prints in his ad., "Prize winners at all the leading shows."

No less than a dozen varieties are advertised as: "The most popular breed in America."

Another variety comparatively new in America is advertised in this wise: "The —— surpass every other breed on earth as a table fowl. If you want either stock or eggs you must come to the man who put the —— on the American map."

The A. P. A. in its own advertisement, and referring to itself, says: "On its shoulders rest this gigantic Billion-Dollar Industry"; also the ad. reads, "The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry."

Yet a prominent A. P. A. official advertises his variety like this: "The ——

—— are the Standard by which all other —— —— are judged.''

Try to reconcile the censoring committee and the statements in last two paragraphs. Maybe censoring, like charity, should begin at home.

———o———

Permanganate of Potash as a Poultry Remedy.

IN another column we print an article by J. H. Petherbridge, entitled ''Poultryman's Practical Dispensatory.'' Mr. Petherbridge, as a practical pharmacist, should know what he is talking about. We are glad to note that he makes an attempt to explode the silly ''poultry panacea'' belief in permanganate of potassium as a cure-all for poultry ills. We are sorry that he did not bear down harder on the foolish use and abuse of permanganate of potash.

In many of the poultry yards we visit, and at every show, we find ''pink tea'' being served to poultry. There is something about the pretty color that permanganate of potash gives to drinking water, that helps the poultryman to believe that he has a wonderful remedy. The real remedy part of it is mostly ''Christian Science,'' so far as any actual benefit from the drug is concerned.

We have been treated to ''parlor talk'' Government Bulletins and articles and poultry literature, ad nauseam, extolling the wonderful remedial virtues of permanganate of potassium used in the drinking water for poultry. It has been promoted as a cure for various ills, and as a great preventive of disease. We see the dope and the purple-tinted water everywhere, and some of Uncle Sam's experts and State experimenters have pronounced it good. It has been a pretty little game of follow-my-leader with the drinking cup full of prettily purple-tinted water.

Such use and abuse of permanganate of potash should be stopped. It is not a good poultry remedy when used in drinking water. Unless the solution is freshly made and is strong, it has little virtue as a disinfectant or disease preventive. Permanganate of potassium unless kept in tightly-sealed, dark bottles spoils quickly. The solution in water decomposes rapidly and loses its usefulness. The strength of solution commonly used is such as to make it of practically no value for the purpose for which it is used, even if the solution would keep, which it won't.

Aside from its prompt decomposition and general uselessness, as commonly employed, permanganate of potassium used frequently in the drinking water has an action which should condemn its use. We don't know just how or why it acts in this manner, but we have observed bad results in nearly 99% of cases where this drug was used in the drinking water. It is a clinical fact that it gives an offensive taste to the eggs, and that it may discolor the egg yolk. Aside from the fact that the solution as used is worthless, this fact should stop the practice.

Permanganate of potassium has its uses, but is no good in a watery solution unless freshly prepared and quite strong; then to be used as a disinfectant wash, but not as an internal remedy. We have found the drug very useful. We use pure crystals of permanganate of potash and grind them fresh as needed. Mix one grain of finely powdered permanganate of potash with one ounce of finely powdered, dry sugar of milk, and a little pulverized gum Arabic. Mix thoroughly and make fresh when needed. Apply to canker or diphtheritic patches with a blow pipe. We have used it personally and by proxy, thousands of times, and with good results every time.

Stop doping fowls and stop the use of ''pink tea.'' It is a bad habit to get into and does no good.

———o———

"Util-i-t-e-e" and the Fancy.

WE WISH we had more time to devote to reading our exchanges, it is very diverting and almost as good as ''refined vaudeville.'' One of Editor Cornman's ''Timely Editorialettes'' in the April Poultry Item reads:

''Have you gotten hold of the new *utility movement* in poultry culture? The purely fancy fowl is all right in her place; but to build a poultry business on her as an exclusive foundation

First prize young Indian Runner drake at Trenton, N. J., Interstate Fair, 1913. Bred and owned by E. G. Curtis, Atsion, N. J.

is folly. Get after the 'business hen.' She is the coming thing in poultrydom. In fact she is the thing today. Flowers are beautiful and of very great value; but the man who hasn't vegetables as well as flowers is in a rather bad way. *utility* comes before *beauty.*''

Now, who'd 'a thought that of ''Corney''? Wonder where he has been all these many years. Remember when Felch and Hawkins and Williams and Rudd and hosts of others used to convene with the Massachusetts Board of Agriculture and spout about utility breeds and practical poultry? In the ''good old days'' these men had a lot to say about *combining* utility and beauty. Remember how H. H. Stoddard in the Poultry World and American Poultry Yard (a weekly) used to spout about practical values and *utility?*

Go back as far as you like, hasn't almost every new breed or variety been exploited as possessing much utility value and, especially the American varieties exploited as *''general purpose fowl''?* Don't the English say that they built their standard with a view to conserving eggs and meat values? And are not some of the members of the A. P. A. of today trying to mold our American Standard into such fashion that eggs and meat values shall be mainly conspicuous by their absence?

''New utility movement,'' grab it, get hold of it. What is it? Where is it? We mean the ''new'' part of it. Remember the old Boston Show held in Music Hall and how the word ''Util-i-t-e-e'' dandled before the old-time fancier used to be like shaking a red rag before a bull? Works that way now, don't it? Recall that discussion of the words ''fancier,'' ''breeder'' and just plain ''poultry keeper'' at the Atlantic City convention last summer? Pretty warm while it lasted, and not cooled off in some places yet, is it?

Someone referred to us in American Fancier a while ago as possessing ''the true fancier spirit.'' We hope we do. But we have never been widely advertised as a fancier and have leaned very strongly to the practical and utility side of poultry keeping. If we can qualify as a real fancier we will be mighty proud of it, for we honor the true fancier who puts his whole heart into developing something beautiful that breeds true. We like the beautiful and we like to breed and grow beautiful things, but we can't get over the feeling that ''handsome is as handsome does.'' We can appreciate and admire the man who is a fancier for fancy's sake, who works with a beautiful or odd thing until he makes it breed true, regardless of whether it possesses utility merit or not. We know we can't compete in his class, for, much as we admire beauty, or even oddity, we must have practical and utility values also. We've no use for mongrels and we do like uniformity and thoroughbredness.

''Corney's little editorialette'' is quite pat at this time when the American Poultry Association, built primarily for and by the fancy, is advertising that ''on its shoulders rest this gigantic billion dollar industry.'' Not that it really does rest there, or that anyone really knows the actual facts about the ''gigantic billion-dollar industry,'' but it gives the impression that it is a little late to put the foundation under the poultry business.

We take it that such ''utility movement'' as there is has been and is of sturdy growth like the oak and that it has been developing many years. Both the fanciers and the strictly utility men have had a hand in it. The utility men are growing and developing fancier traits, are becoming fanciers. Some of the fanciers are more tolerant and less excitable about ''util-i-t-e-e.'' We are all of us getting a little broader minded and able to see a bit more clearly, as we should. Utility is not a mushroom growth, grown overnight.

We need and must have the fancier, likewise we need and must have the utility man, but we should give all the encouragement we can to the man who can combine fancy and utility. We don't think it is quite fair to speak of vegetables and flowers. Both vegetables and flowers are the work of fanciers; if they had not fancied, bred, culled, developed, specialized and standardized both vegetables and flowers we would not have such a wonderful array today. What was the humble and neeessay potato before a fancier found it and standardized its breeding? Beauty may come before utility or it may come after, but the fancy and utility, the beautiful and the practical, should go hand in hand.

Combine beauty and utility, Mr.

Cornman, for best results and to keep up the interest in good work; and for just relaxation and pleasure let's also have the good there is in just fancy for fancy's sake.

Shipping Day-Old Chicks Safely.

IT is the duty of every shipper of day-old chicks to so box the chicks for shipment that they will arrive in good order and with fatalities few and far between. Careless boxing may result in loss and disappointment for the customer. A disappointed customer seldom orders again.

In boxing day-old chicks, they should, so far as possible, be safeguarded against rough handling during transportation. It is not safe to pack 50 or more baby chicks in a smooth-bottomed box and then turn them over to the tender mercies of the expressman. The smooth floor of the shipping box does not give the chicks any foothold. Chicks that slip and fall down on a smooth floor are apt to stay down and be trampled on or killed. That means a disappointed customer.

This spring we opened a two-compartment shipping box, containing 100 chicks, shipped only about 10 hours journey, and about a dozen chicks were found trampled flat, soaked with the droppings of the other chicks and almost dead. The floor of the box was smooth and bare. It gave no foothold to the chicks, and when the box was tilted or roughly handled during shipment, some of the chicks went down and stayed down to make a foothold for the others. Luckily these chicks, in this instance, were not past help, and by drying them out in a warm oven, all but one were saved. They were particularly vigorous chicks. Had shipment been delayed a few hours longer on road, the chicks that were trampled would have been a dead loss.

It is a mistake, too, to use short, loose litter or chaff on the floor of a shipping box for chicks. Such practice is liable to result in loss by smothering chicks.

The best shipping box for chicks we have seen this season, was a home-made affair, made from waste box material. The inside dimensions for compartment or box for fifty chicks, were 12½x15 inches, and 4½ inches deep. The floor of the box was carpeted with a double thickness of burlap sacking, tacked down securely, and this was covered with a thin layer of long hay, making a fine footing for the chicks. The top of box was covered with two thicknesses of burlap sacking and a wooden bar or cleat handle was fastened across middle of top of box. Besides serving as a handle, this cleat prevented setting other boxes on top of chick box. This type of shipping box is made single for 50 chicks, or double for 100 chicks, and 300 chicks can be included in one parcel, by cleating three such double boxes in tiers, one above the other, allowing a two-inch open space between the boxes. Distance shipments have been made with this carrier without the loss of a single chick.

Each shipment is conspicuously labeled in big black letters as follows:

LIVE CHICKS

EXPRESSMAN: Please be SURE and keep this box of Chicks LEVEL, DRY, OUT of the SUN, and AWAY from FIRE or HEAT, as there is DANGER of KILLING them.

RUSH.

Trying to Satisfy the Kicker.

DURING the last two weeks of March we had more complaints sent us by dissatisfied buyers of stock or supplies, all from different advertisers, than we ever had before for a like period. Each of these we investigated carefully, and, in our opinion, the complainant was the one at fault in each case.

One man purchased three breeding birds for $15. When they arrived he was dissatisfied with them, and so wrote the breeder. The breeder immediately responded with a letter saying that he always desired to satisfy every customer, and rather than have the buyer feel disappointed and dissatisfied, in this case, he would cheerfully make any adjustment the customer considered right. The buyer asked for a refund of $10 to close the matter; and he got the $10. Then he sat down and wrote us a long letter of complaint about the breeder, and how unsatisfactory the birds were. We do not consider that the buyer acted fairly or honestly in this matter, for he certainly wrote us with intent to injure the breeder, after having accepted settlement from him, and on the complainant's own terms.

As to the birds, he lost two of them, and very likely through his own fault, but the breeder had done his best to make the adjustment satisfactory. When it comes to dissatisfaction with purchased goods, the disgruntled buyer can always find plenty of things to find fault with, in fact, under such circumstances, he seldom can see anything whatever that is all right about the unsatisfactory purchase.

In another instance, a shipper of market eggs wrote us a complaint about a dealer to whom he had been shipping. We investigated the dealer and his methods and also wrote to the lawyer who has handled the complainant's claim, which in this case also had been settled. The lawyer replied that the dealer stood well in the community, had a good reputation for honesty, and always settled all his accounts promptly, although in the case cited, he had disputed the claims and had not settled the account until satisfactory adjustment was made, when he paid promptly. Further correspondence with the complainant developed the fact that he merely "wished to warn us" against the dealer, because he had seen his name mentioned in our Journal. It appears to us that so far as honesty and square dealing goes, the dealer has the best of it in this case.

Another buyer complained about hatching eggs, for which he paid a good price, and which ran a large per cent. infertile. Investigation developed that he had received without charge, a full sitting to replace the ones he found fault with, and that he got a fair hatch from the first sitting.

One other case started last fall, when the buyer bought a $10 breeding male. It arrived with leg broken. He reported trouble, endorsed on express receipt, and got another male by return express, the shipper assuming the recovery from express company. The second bird shipped was reported to have died soon after arrival and the breeder, anxious to satisfy the customer at any cost, sent a third cockerel in response to a long, pathetic, hard-luck letter from the buyer. We got in touch with a neighbor of the buyer and found that the last two birds shipped were both alive this spring. The second bird had been ailing, but had not died as reported. Evidently the second bird came so easy, the buyer, hoping to get another, did not wait for it to die before reporting it dead. Yet he was not satisfied, and registered a complaint with us.

We haven't any patience with this type of kicker and consider them not only dishonest, but malicious. Having already cheated the breeder they seek to injure him. It is well known to observers of humankind that certain types of mentality are so made that they invariably seek to injure those who have already suffered injury or injustice at their hands. It is contemptible business. There is no satisfying kickers of this type.

Then there is another type of kicker, equally undesirable, and a most uncomfortable one to meet, either personally or through correspondence. This is the nervous type of "nagger," who can never get over a disappointment or fancied wrong in the purchase. He makes the seller's life miserable until he effects a settlement. When the settlement comes, it seems so easy that he

wishes he had asked for more, and because of that he gets a further "grouch" against the seller, and writes still more nagging letters. He tells his grievances so often that he believes in them himself and adds a little to his hard-luck tale each time and believes that. He nags about how he was cheated and defrauded continually, and makes life a burden to his friends and to the editors to whom he carries his complaint. It is not possible to feel much sympathy for a hard-luck story purveyor of this sort, yet we do feel sorry for him, for he is a sick man and has let his nervous system get into a bad rut and run away with him. He makes himself miserable and all who come in contact with him likewise.

Sometimes kicking is legitimate and useful, but to acquire the habit of chronic kicking is a curse; not only to the kicker, but to many others. When a disagreement or disappointment occurs in business dealings there is often fault on both sides. Before one seeks to lodge a complaint against the other party to any transaction, he should first make sure that his hands are clean and that the fault is not his own.

Don't be a chronic kicker. If you are disappointed in a business deal, and get an adjustment on your own terms, for goodness'-sake don't keep "squealing." After settlement drop the matter and forget it.

—o—

If You Don't Get What You Want, Work and Ask for It.

IN his admirable articles on Parcel Post in February and March American Poultry Journal, H. H. Stoddard predicted that we would soon be mailing eggs in crates, and farm produce in regular carriers, outside of the mail bags in which smaller parcels are handled. He pointed out that the great fundamental idea of the new Twentieth Century distributing system is that the producer must reach the consumer direct. Some small progress is being made in that direction and is being fought at every step by the express companies and the big distributing interests of the trade. Express companies and the middlemen don't want us to have a REAL parcel post, it interferes with their profits.

We are still a long way from having a real and efficient parcel post such as is enjoyed by the people of foreign countries. We may get one in time, if the people of this country work hard enough and ask often enough for it. We are not likely to get what we want unless we demand it, keep on asking for it and make use of it when we get a chance. The way to get a real and efficient parcel post is to make your wants known to the Postoffice Department at Washington and to make your Congressman understand that unless he works for a real parcel post as good as that in operation in Great Britian, or better, that he will not get your vote.

The Postoffice Department has taken preliminary steps in the right direction, but it stopped just a few pounds short of making the first steps of real value. Ten cities: Atlanta, Baltimore, Boston, Detroit, LaCrosse, Wis., Lynn, Mass., San Francisco, St. Louis, Rock Island, Ill., and Washington, D. C., were selected late in March to begin the work of establishing direct connection between producer and consumer, and the postmasters in these cities have begun the work of securing a list of names of "persons who are willing to supply farm products in retail quantities by parcel post." Printed lists of these names are to be distributed among city and town postmasters.

Further, Postmaster General Burleson has issued an order permitting the use of crates and boxes for butter, eggs, poultry, vegetables and fruit shipped by parcel post. Packages weighing less than 20 pounds must be specially packed according to former rules and will be carried in mail bags as before. Egg crates, boxes and packages of farm produce weighing 20 pounds and *not over* 50 *pounds* may be shipped by parcel post in the type of package that has been commonly used when shipping by express. Live poultry or day-old chicks cannot be shipped by parcel post.

The present, long established, most convenient and most economical way to ship eggs is in regular cases of 30 dozen each. The best way for the town dweller to buy eggs is in a 30 dozen case, neighbors and friends can club together and buy a case a week, where the families are not large enough to conveniently use a full case for one family. This is being done and has been done for a long time, but the Postoffice Department did not take the trouble to find out that the 30 dozen case is the best shipping unit available at this time. Best selected eggs will average above 50 pounds to the 30 doz. case. John Stewart of California has published the statement that Petaluma Leghorn eggs will run 56 to 62 pounds to the case.

Postmaster General Burleson's experiment in handling eggs by parcel post would have more beneficial and far reaching results if the commercial, returnable, egg case had been taken into consideration. Although the parcel post proposes to handle eggs in regular cases, its present (April 10th) rules *forbid it.* You can't send a case of eggs by parcel post. The rules set the *weight limit* at 50 *pounds* for parcel post packages, and a 30 dozen case of good eggs weighs *more,* than 50 pounds. There is also a *size limit* for parcel post packages which is that the length and girth of package, added, shall not exceed 72 inches. The length and girth of an egg case is nearly 80 inches. So, you will see that while the parcel post pretends to experiment with shipments of eggs in case lots, the postal *rules do not permit it;* for a case of eggs is too large in size and too heavy to be accepted as parcel post matter. No doubt this will be remedied in time, but it is a good thing to call to the attention of the Department.

Congress has fought the increase in weight limit for the parcel post, the express companies are against it for it hurts their business. When the ruling was made that live chicks and fowls could not be shipped by parcel post, express rates on live poultry and chicks were advanced in several parts of the country. Unless the Postoffice Department makes a ruling that will permit shipment of full cases of eggs, it is probable that there will be an increase in express charges on eggs in case lots also. If the postoffice experiment of giving the public the "full benefit of the parcel post" by "establishing direct relations between the ultimate consumer and the original producer" is to be of real benefit, instead of a bluff and farcial sop to public opinion, then the rules should be so amended to admit sending full cases of eggs by post. Advance the weight limit to 100 pounds, as was at one time

Crusader III, a Boston Winner

May for Regal Chicks

I have always maintained that the month of May is the very best month to get out the chicks for the January and February shows. On account of the severe winter and the cold, late spring, the May eggs should have an additional value this year. Fertility will be at its best and when the chicks come out you will have the fine spring weather to give them the desired quick growth. At the Boston show, 1913, I had five cockerels and eleven pullets under ribbons in the single and pen classes. Not a single bird was hatched before May 20th of the preceding spring. Why not choose this month to become acquainted with

REGAL WHITE WYANDOTTES

I guarantee a good hatch. Eggs for hatching from twenty beautiful exhibition matings, $5 per 15, $9 per 30, $12 per 45, $24 per 100. Pens 21-26 (Dorcas Line) $5 per 15, $15 per 50, $27 per 100. Utility Eggs, $9 per 100. Special Matings, $10 per 15, $18 per 30, $25 per 45.

FREE—Send for 20-page illustrated catalogue and mating list.

John S. Martin : Box 51 : Port Dover, Canada

promised, and increase the "length and girth" limit to 100 inches.

Trade publications are skeptical about the handling of butter, eggs, poultry and produce by mail. They raise the question of "quality," "differences between customer and producer," and other imagined obstacles. As they represent the middlemen, the shippers, packers and dealers, it is to be expected that they will be pessimistic about the increased utility of the parcel post. Quality won't suffer. There are a lot of farms now doing a direct to consumer business. The up-to-date producer knows that he must deliver quality and satisfy his customers. The best eggs now consumed on city tables, don't go through the regular trade channels, but are shipped direct by the producer. More will be so shipped when we get an efficient and real parcel post. Most of us know something about the "quality" of the "fresh eggs" of the market. It doesn't matter how much the middleman squeals, his days of golden harvest of profits on goods someone else worked hard to produce, and for which he paid the lowest price he could, are drawing to a close. There are better times coming and producers are going to deal direct with consumers, more and more as time flows on.

The elimination of the middleman may not lessen the high cost of living, it is probable that cost is up to stay up, for reasons that should be obvious, but a more effective and better distribution by parcel post will effect a small saving for the consumer, insure him better quality and better foods, and it will give the long suffering producer a chance to get a better living and put by a little for the "rainy day." The producer has been underpaid and robbed quite long enough.

Keep in touch with parcel post progress. If you don't get what you want, —*work* and *ask for it.*

As we go to press we note that one more thing American Poultry Journal has worked and asked for is bearing fruit. The Postoffice Department has issued orders that hereafter a letter, bill, or other first class mail matter, provided it is duly addressed and properly stamped with the required amount of postage, may *be attached to the outside* of parcel post matter. This is a step in the right direction. The law does not permit a parcel post package to be sealed and writing cannot be sent *inside* of a parcel post package, if this should be done the whole package becomes first class matter for which two cents an ounce is demanded,—don't forget this. But, you may attach a properly stamped letter to the *outside* of an unsealed package.

Keep right on asking for what you want and you'll get it in time. There are good times coming. The parcel post is young yet and there is a lot of wealthy opposition. The *people* don't rule in this country *yet*, but they *can rule* if they keep everlastingly trying for it. *Wake up* and *get busy!*

"The High Cost of Living."

WE hear a great deal about "the high cost of living" and certain it is that the cost IS high. It has been worked to the limit as political capital. We have been told in the press and by public speakers about many things that were sure to "reduce the high cost of living." Some of us fondly believed that the revision of the tariff and the new currency act, might in some mysterious way help lessen the cost of living, the newspapers said so and some believed them, but, though we have new laws, the cost of living stays up and keeps climbing higher. Our lawmakers knew that such would be the case, even while they proclaimed the blessing we were about to receive.

It is quite probable that the cost of living cannot be reduced very much. It is also obvious that it may be better to earn and receive more money, be better paid, even with high living cost, than to have wages cut down and a lesser cut in cost of living. Few of us would be content to live as did generations that have gone before us. We wouldn't, if we could help it, live as did our grandmothers and grandfathers. Population was thinner in those days. Some things were easier come by than now, but many things, we now consider necessary, could not be had at all. Natural resources were abundantly drawn on in the "good old days" and in some things our forebears were prodigal and wasteful; but could they return and see us, how extravagant and wasteful would they deem us?

Our population has increased by amazing leaps and bounds. Deserts have been made to bloom and are now being cut up into farm homesteads. Some of our farmers have over-worked the soil without preserving its fertility, some have cut our forests without provision for conservation; plenty came so easy that no thought was taken of protecting the source. Farm living comes hard, farm produce has sold low and tenant farmers have stripped the farms for immediate profit without thought of the future. Everywhere the prevailing thought has seemed to be that with so vast and fertile a country the resources must be inexhaustible. Waste is everywhere and we keep right on wasting. We continue to let steamship companies dump all sorts of immigrants on our shores to increase the population and the average quality isn't up to that of our "immigrant ancestors"; not by a long way.

Every four years, and in some States and most communities every year, we get all worked up and excited over politics and saving the country, or saving the community, but the men who work at and study politics the year around, instead of periodically as do the voters, are the ones who tell us how we must be governed and what we shall and shan't do. "The sovereign people" is a phrase to juggle and flatter with and to get votes with. It might mean a whole lot and if it meant more it would mean better times and a better living for everybody. The people

C. N. MYERS, Box A, Hanover, Pa.

could rule if they would give sufficient time and attention to it, but they don't. "Public opinion" is made in newspaper offices at the instigation of those who are willing to pay for making it. Read half a dozen different papers, representing as many different interests, and it will help to give you a better understanding of how the public mind is played upon and how "public opinion" is manufactured. Don't read just one paper, read many and learn to think for yourself.

Men do not seek government offices on account of their health or because they are particularly concerned about the rights of the people. Most of them are concerned in matters more directly and deeply affecting their own personal and selfish interests. The time when they are most concerned about the "rights" and the "will of the sovereign people" is when they are seeking votes. It is the same old story year after year. The bell-wether jumps through the gap in the fence, with a great jingling of bells, and the rest of the sheep scramble wildly after, though they don't know why. It is probable that if you were not told about it and did not read about it, that you would never know the difference as to which party was in power, so far as the results concern you. The exciting clamor about party helps to keep you in line like the sheep just mentioned and your competitive instincts are played upon to keep you from thinking for yourself, and to see that you let your political bell-wether do your thinking and leading for you. It's a beautiful system. Think it over and next time you consider "the high cost of living" do a little thinking for yourself and don't be in too great a hurry to swallow ready-made opinions.

The cost of living is high. It is going to stay high. We will be fortunate if we can keep it from going higher and if we can increase our means to meet the increased living cost. It costs more to produce foods than it did. The producer has in most instances been under paid and he must now get more. The middleman has been hoggish and has gobbled big profits to live in luxury, and keep a garage full of high priced cars, and he needs to be taken in hand and either eliminated or made to mend his ways. The producer must take into consideration the production cost and must fix the price of his own goods, instead of taking what he could get as heretofore.

SENSATION IV.

Winner of first prize and color special at Madison Square Garden, New York, Dec. 26-31, 1913, in what was universally conceded to be the grandest bunch of Reds ever shown. Bred and owned by Red Feather Farm. Also won fourth cockerel and second pullet. Box 100, Tiverton-4-Corners, R. I.

The big ranges of the West are becoming farm homesteads and up go the fences. Cattle can no longer be grown for almost nothing on ranges that cost only the herders' wages. Poultry and eggs have outgrown being simply a farm by-product fed largely on waste. It costs more to produce beef, poultry and eggs and the price has to go up. A great many farmers are not getting more for their produce, but they should. Some producers are being frightened into accepting low prices because the big-monied distributing interests have been importing beef, milk and eggs in great quantities and told about in the alarming figures of pounds, quarts and dozens, which permits juggling with figures in millions and billions. If the producer attends strictly to business the scheme won't work.

An effort was made by the Boston contractors to lower the price paid for milk to Reading producers. To this end big importations of milk were made from outside the state and even from Canada. The Reading farmers were threatened with loss of milk contracts unless they lowered their prices. The price was already as low as it could be and allow the milk-farmer a fair living. The independent milk farmers combined on April 6th arrived in front of the State House with a big auto truck loaded with milk cans, and offered free milk to all who asked for it. They said they would do this as long as the Boston contractors held out for lower prices. Nine hundred quarts were given away because the producers said they didn't want to see it wasted and they refused to sell it unless they could have a decent price. The Governor made a short speech expressing his sympathy for the farmers declaring that it seemed to him that the proper solution is the elimination of the middleman, so that milk can go direct from farmer to the consumer.

"It seems to me," he said, "that the state should find a market for Massachusetts milk, and eliminate the cost and extra profits of the middlemen." The contractors capitulated and renewed contracts at the farmer's price.

EVENTUALLY, if you want the Best in all breeds, you will send to the UNITED POULTRY FARMS, Inc., Scotch Plains, New Jersey. **Ornamental Land and Water Fowl for sale.**

The big importation of milk was mostly bluff to scare the farmers.

Eggs in lower Plymouth County, Mass., dropped in April to the lowest prices that have been paid in many years. The cost of grain and supplies stayed up. During the first week in April, in our immediate section, 18 cents a dozen "in trade" was the highest offering by grocer collectors. The trade organizations sent circulars broadcast to collectors and buyers to "keep the price of eggs down" and much was published to the effect that eggs should go into storage at 16 cents a dozen or less. Within twenty miles of our home the small farmer had to sell 6½ dozen eggs for $1 and all this time eggs in Boston were retailing for from 30 to 32 cents a dozen. A number of people, in our immediate neighborhood, who keep poultry decided to refuse to sell eggs for less than 24 cents a dozen. People always used to get panicy when eggs began to accumulate and the price began to drop. This time there were symptoms of a little improvement. It don't pay to keep hens all winter with production at low ebb and then sell the eggs at cost of the hen's food in March and April. Some of the producers began to "put down" eggs in water glass, others decided to hatch more chicks, as there is a good demand (greater than the supply) for chicks at 10 to 12 cents each and that is as good as 5 to 6 cents each for the eggs. It wasn't real coöperation, or really effective effort, but it produced results. Eggs became scarce in our neighborhood right at the time of high production, and within one week the collector, who had reluctantly and languidly accepted eggs "in trade" at 16 to 18 cents a dozen, was begging for eggs and offering 22 cents a dozen. Does that suggest anything to you?

Egg farmers need to get together and to work for their own interests. The cost of living is just as high on the farm as it is elsewhere. Production cost must be counted. The producer must get in touch with the consumer and must get a better price for his product. The consumer should not pay more than he is now called upon to pay, but he must expect to pay according to quality. The only way to get results is to cut down the fat profits of the middleman and to stop believing their glib yarns about the effective and efficient distributing channels they have established and must maintain. As a matter of fact these distributing channels are exceedingly wasteful, but not at the expense of the middlemen, and the producer and the consumer are the ones who have to stand the loss.

Don't worry over the high cost of living. Don't believe all you hear about the manner in which this high cost may be reduced. The way we live and the times we live in affect the cost. The cost of living may be expected to remain high. You, Mr. Poultryman, have to stand your share of the high cost and you must look out for yourself. Work for your own interests. Figure cost of production and do it right. Fix your prices where you can

—o—

A New Book on Poultry Diseases.

WE have just reviewed a new book entitled "Poultry Diseases" by B. F. Kaupp, M. Sc., D. V. S., who is Commissioner of Health, Spartanburg, S. C., and author of "Animal Parasites and Parasitic Diseases." Prof. Kaupp is a well-known writer and investigator of poultry diseases and was formerly Professor of Pathology, Division of Veterinary Medicine, Colorado Agricultural College and Pathologist to the Colorado Agricultural Station; formerly Professor of Parasitology, Kansas City Veterinary College and Director of the Anatomy Laboratory; formerly Veterinary Inspector, Bureau of Animal Industry, U. S. Department of Agriculture and chairman of committee on Disease of the American Veterinary Association, 1911.

From the foregoing it may be easily seen that Prof. Kaupp has a high standing in the medical world and is recognized as an authority on poultry diseases and his latest book, "Poultry Diseases" is certainly the last word in print on this subject. We quote a few paragraphs from the preface of the book: "This book is written to fill a demand from veterinary students, students in poultry husbandry courses at our agricultural colleges, for veterinary practitioners and for others interested in the scientific treatment of poultry diseases. An effort has been made to make the language so plain that all can comprehend the subject-matter, which is a summary of the thoughts from experimental research in the laboratory of pathology of the author and of many other investigators. For the purpose of simplication, the synonyms are given for the various names of diseases. Then follow, in order, the cause, or causes, the symptom, the conditions found upon post mortem examination, and lastly the treatment for each disease."

The book contains 185 pages, 5x8 inches in size and is profusely illustrated with original half-tone and pen and ink engravings illustrating the many parasites, germs and bacteria that attack our domestic poultry. It is printed on a high-grade super calendared book paper, substantially bound in cloth, linen sewed to make it flat opening and title stamped in gold.

—o—

DR. WOODS' NOTES AND COMMENT.

A certain bacteriologist and laboratory experimenter, who has attained considerable prominence of late in the newspaper press, recently submitted to us a lengthy article on poultry diseases in which he claimed to have proved that roup, canker, sorehead, chicken-pox and several other diseases are all caused by one and the same germ. We returned his manuscript because it proved that he had little or no practical knowledge

A Golden Opportunity

To secure some of the best S. C. Reds in the world. Eggs from Scranton's S. C. Reds will be sold at one-half price after May 15. This includes all matings listed at $5.00 per setting of 15 and above this price. It is not too late to hatch your Winter show birds. Remember my Reds have been the most consistent winners in the big shows of any strain. Catalogue free.

B. H. SCRANTON, Box 350, RISING SUN, IND.

Young's Strain S. C. White Leghorns

I Have No Other Breeds

They are the standard for all the Leghorns of America, and the greatest layers of all domestic fowls.

At the World's famous and Premier Show of America at Madison Square Garden, New York, for the past 13 consecutive years I have won best display and from three to five first prizes, every bird being bred and raised by me.

Winnings at Madison Square Garden, winter of 1913, were as follows:

A STUPENDOUS VICTORY

Cocks, 1st, 2nd and 5th
Hens, 2d, 3d and 4th
Cockerels, 1st, 3rd, 4th, 5th
Pullets, 5th
Pens, 1st

Grove's Trophy, val. $500

Elmhurst Sterling Silver Cup, value $150.

N. Y. State Cup, value $50.

N. S. C. W. Leghorn Club Medal for best cock, best cockerel, best pen and best display.

The Association $10 Gold Special for best display and Grand A. P. A. Medal, value $50, for best bird in whole show, all varieties competing.

This bird is the most superb specimen that has ever been produced of any variety. This achievement was made possible from a thorough knowledge and scientific practice of line breeding for over 35 years, and from a strain that has been bred by our family since 1855, making it the oldest strain of Leghorns in all the World, the male line never having been broken by adding new blood. The **Young Strain Characteristics** follow through all my yards and my matings this year should be superior.

WATCH the Show Reports throughout the United States and Canada, and you will find that Young's Strain predominates and wins the coveted prizes and lays the greatest number of eggs.

Remember you cannot win without my strain. Mating list free, address

D. W. YOUNG - E-3, MONROE, NEW YORK

of poultry, was not competent to diagnose the diseases he presumed to know the cause of, and appeared to be sadly muddled as to the symptoms of the diseases he discussed. Somebody ought to call a halt on the near-scientific twaddle now being circulated relating to the bacteriology of poultry diseases. Unless some of these investigators show greater familiarity with their subject, make more careful and thorough investigations and are less anxious to jump into print with half-baked theories, without practical foundation, they will do much to create a doubt in the public mind as to the value of the study of specific germs.

* * *

While one investigator is trying to load the responsibility for a number of unlike diseases upon one long-suffering variety of micro-organisms, a bacteriologist of international repute, investigating four varieties of bacteria found in stored poultry, says:

1. "All of these bacteria are normally present in the intestinal tract of healthy human beings."

2. "All of these bacteria are widespread throughout nature, being present in water, air and soil."

3. "These bacteria gain admission to man's intestinal tract by being taken into the mouth in the food that he eats, the water that he drinks and the air that he breathes."

"From these three facts we get the obvious deduction that these bacteria or any products produced by them while in the intestinal tract of man are not dangerous or deadly to him, for if they were, the human race could not, by any possibility of chance, have existed until the present hour."

* * *

The above quoted bacteriologist was working for and paid by the packing and cold storage interests. It is reasonable to assume that he manipulated such facts as he possessed to influence opinion in favor of storage poultry and to make the bacteria found in such poultry appear harmless. Another investigator equally prominent showed that these very same four species of bacteria may and do, under favorable conditions, cause serious diseases in man. So we are still "betwixt 'tis and 'taint." The harmlessness or the dangerousness of the germ, on paper, still depends upon who payes the wages of the bacteriologist. We also have the spectacle of a bacteriologist of note, heading the laboratory of a well-known temple of learning, on the witness stand for the defense in a now notorious egg case. In the course of his testimony he declared that there was no danger in the bacteria in rotten eggs and that such eggs were perfectly wholesome food. If you have money enough you can buy a scientific expert to testify to anything on either side.

* * *

Delving deeper into "expert testimony" we find the statement that: "Bacteria or products produced by them while in the intestinal tract of men are not only harmless but beneficial to him." And so on ad infinitum. The viewpoint seems to depend a lot on the "hobby" of the "expert" or upon "whose ox is gored." Sift it right down to bed-rock and man is made up of a multitude of individual living micro-organisms of many kinds; some are good and some are bad; the bad are not always bad—but chiefly remain in subjection until they have an opportunity to be bad. As long as the body balance is kept on the side of soundness and health we have little to fear from germs; when the balance tips

Day-Old Chicks Hatching Eggs And Breeding Stock

Bred from Range Grown Birds

It's Not How Many You Buy, It's How Many You Raise That Spells Success

Sunlight Poultry Farm's chicks are livable chicks, as well as quality chicks, because they are bred from quality birds that have vitality, stamina and the best laying qualities bred into them. They are the chicks that will develop into robust cockerels and pullets, that will please you. Not a yarded breeder on the farm, but just a large flock of breeders, out on unlimited range, housed in open front houses. Is it any wonder that I get such good fertility in my eggs and such strong, healthy chicks?

Read What One of My Many Satisfied Customers Says About My Chicks:

Friars Point, Miss., April 6th, 1914.

Sunlight Poultry Farm, Lynchburg, Ohio.

Dear Sir: The day-old chicks you shipped me on the 1st arrived here about noon of the 3rd. There were two dead in the box, the other 101 were as lively as they could be and today are all scratching like old chickens. They are as large as some two weeks old chicks hatched under a hen and are far more lively. I am more than pleased with your treatment and will be glad to speak a good word for you and your breed of chickens whenever I can. Several of my friends after looking at these chicks have asked me to save them a setting of eggs as soon as they begin to lay.

If I can raise half of these I have to grown hens I will feel that I have gotten my money's worth. Will send you a picture of these in a short time.

Thanking you for your fair treatment and wishing you every success for the future,

I am yours very truly, a satisfied customer,

A. C. JOHNSTON.

"The Most of the Best for the Least."

SUNLIGHT POULTRY FARM E. N. Lemon, Owner **LYNCHBURG, OHIO**

the wrong way and susceptibility begins, then look out for trouble. At the same time the bacteriologists have taught us that there are certain species of germs that have never been known to be good and that are always bad and looking for a chance to be worse. If you know a certain thing is poisonous, but though very dangerous some persons under favorable conditions have taken a big dose and escaped unharmed, you still respect it as a poison and steer clear of it, if you possess good sense. It is the same way with bad disease germs. They may be all about us. We may swallow millions of them without knowing it and without being injured, but there is no sense in eating food that we know to be contaminated with these germs, particularly when we know that eating such food has caused and does cause dangerous disease oftentimes. Some of our bacteriologists have done a wonderful and good work of great benefit to humanity, but these men are too busy working for the best interests of the race, and for the love of their calling, to waste time seeking the glamour of publicity. But from the vaporings of publicity seekers and of the highly paid scientific experts of our "courts of justice" Good Lord deliver us!

* * *

A correspondent says: "Would it not be a good idea to have competent people state, NOT the good points, but the defective points of breeds, varieties and even strains? A symposium of that kind, by those who have had experience, would be more enlightening to inquirers than oceans of adjectival eulogium. It is all very well for the enthusiastic to 'lay it on thick,' and perhaps pardonable, but the inquirer must choose. Nor is it exactly helpful to tell him to choose what he likes. There are chickens that do not lay large eggs, chickens that are hard to raise, some more prone to this or that ailment. There are chickens that are voracious eaters, chickens with much offal, chickens with coarse meat, others naturally dry. There are chickens quite hard to breed true. A man might choose a thing, notwithstanding some other thing; may choose certain qualities beyond its known drawbacks, but it is a pretty serious thing to be fooled in choosing by suppressing facts. Cumulative disappointments may be a valuable experience but they are not likely to promote sustained enthusiasm nor to advance the interests of sound trade. Incidentally, have not 'strains' been strained to the breaking point? (Signed) Senex."

* * *

The above quoted letter assumes much that is as yet unproved. M. "Senex" should be employed as the editor of a poultry paper for several years; he might learn wisdom from experience. Let him so much as criticise, or seem to criticise, any particular variety or strain and then witness the deluge of correspondence damning the editor and telling him of the error of his ways. In these columns we strive to give our readers helpful and accurate advice, but we can't choose a breed or strain to suit the individual. The thing that pleases one does not please another. A variety or strain that suits one man so well he even wants to talk about it in his sleep, another man calls worthless and wouldn't have for a gift. And that is the way it goes. We endeavor to give such information as we possess in a fair and unbiased manner and tell the truth about each variety. But who knows the whole truth? Individual specimens even in the same strain vary in quality with the specimen examined. We find good points and inferior or defective points in different specimens of the same variety. There are no hard and fast separable differences such as M. "Senex" would have one believe. For example, take one of our largest breeds: There are Brahmas that are fine layers of big eggs, possess big bodies full of fine-grained, juicy flesh, little offal, and that are not voracious eaters, that possess good qualities to the maximum. And (perhaps in the same flock) there are other Brahmas that possess qualities quite the reverse of these good ones. Any man who has handled poultry for market and for eggs knows that such conditions are to be found in most breeds. Will M. "Senex," in his infinite wisdom, tells us how, for example, we might pick and choose to suit M. "Senex" himself, for instance?

* * *

Nevertheless, there is food for thought in M. "Senex'" letter. That is why we print it. Breeders might well spend more time trying to tell the actual facts about their favorite varieties instead of trying to fill so much space with sickening praise that borders absurdity. Some claim all the virtues on earth, and above or below it, for their favorite variety. It cannot all be true. Yet, when a man rides a hobby, he sees value and quality where little may really exist—there is a glamor about one's favorite poultry that seldom leaves the owner or promoter with clear vision. He sees only the good, and forgets the bad. He remembers the heavy layer of big eggs and forgets the poor one. He always recalls the pullet that matured and began to lay at five months, but he conveniently forgets the many that waited a full seven months or longer before shelling out the first small eggs. By all means, let's have more real facts and less eulogy, but at the same time let's try to be fair and just—also to try to remember that what

BRED AND OWNED BY ARTHUR G. DUSTON,
SOUTH FRAMINGHAM, MASSACHUSETTS.

may suit us, quite likely will not suit someone else.

* * *

We mentioned the Brahma; now let's consider another extreme, the Campines. One man, claiming much experience, told us in all seriousness that the flesh of their small bodies was dry and tasteless, the eggs small and few. That was only his particular individual experience, perhaps his own fault, because of poor management. We know that Campines, though small in size, can be grown into plump, fine-meated excellence that compares favorably with the partridge. It is a matter of knowing how to grow them and of knowing when the meat is ripe to eat. As for eggs, there are plenty of good sized white eggs exhibited to testify to quality and there is no doubt that the breed lays well when properly handled. While not a market meat breed, their flesh can be made a desirable addition to the family table. Then take the Cornish, another extreme type. Some folks will tell you that they harden quickly and that the flesh is apt to be coarse and tough. The fault is not in the breed but in the grower. For many years capons from Cornish fowl have been esteemed highly among English epicures. Writers who know good things to eat have written much about the high excellence of this English "beef breed," and artists have filled many pages with illustrations of Cornish dressed for table poultry. There are a host of breeds in the Standard, and out of it, and there are mighty few of them that are not capable of being bred to great excellence and considerable profit, if handled by a man who likes them, who is suited with his choice, and puts real effort into getting the best out of them.

* * *

Our associate, H. H. Collier, is turning out some mighty good copy for the Pacific Coast Department. We hope you read his grist in the April issue; there were some good things in it "worthy of a thought." If you haven't read it yet, look up the April issue and read pages 690 to 693 inclusive. It is well worth noting that on the plant of D. Tancred, Kent, Wash., that the man in charge of that important duty of collecting eggs and attending trap nests gets a salary better than that paid to many college professors of poultry husbandry. Mighty few of said "professors," by the way, do any egg collecting themselves. They haven't time for it. As Mr. Collier suggests it might be interesting to know just how the egg collecting and attending trap nests is done, and by whom, at college experiment stations where world's records are being made. Egg collecting and attending to the nests are among the most important duties on any poultry farm and require the services of a very reliable and responsible person, whether you sell hatching eggs or market eggs, or are simply out to make a record. We recall a certain professor of poultry husbandry who once said to us that he wouldn't dare to express a wish for a 300-egg hen, or a hen that laid two eggs or more a day, for if he did some of his students would be sure to find the phenomenal bird for him and produce "unimpeachable evidence" of record.

* * *

We note also that when Mr. Collier came east last summer he was in one continual state of moult. He says he would have shed all his plumage if the sun had not been so bright. We did not realize that there is such a difference in climate. When we talked with Mr. Collier at Atlantic City, we didn't know he was in full moult. He must be a regular full-feathered Cochin when he is at home. Come to Plymouth County next time, Harry, and we'll find you cooling breezes and cool nights almost as good as you have 'em at home.

* * *

According to press advices the Department of Agriculture, in response to the protest of California egg farmers against the wholesale importation of Chinese eggs claimed to be of doubtful quality, has ruled that the importation of Chinese eggs cannot be prohibited as long as they are fresh.

That raises an interesting question: How long is an egg FRESH? For some time we have kept our legal authorities busy jumping on the grocers who have offered stale or aged eggs for sale as "fresh" or "new-laid" and have fined some of them. Rightly so too, for ancient eggs of doubtful quality, no matter where laid, should not be permitted to be falsely labeled. But how about the Chinese egg? How can it be "fresh" when it lands in this country? If it isn't fresh, why can't the importation be prohibited? And, in any case, why not insist that eggs from foreign lands be labeled?

In this country we are beginning to pride ourselves on "yesterlaid" and "this-day-laid" eggs. We don't look upon an egg as really fresh after it is a few days old. We ask that our fresh eggs come to us direct from the egg farm with the new-laid bloom of youth and purity still on them. How can eggs from China be fresh? In China the jobbing unit for eggs is 1,000 eggs instead of a 30 dozen case which is the unit in the U. S. Eggs in China are quoted and sold at so much per thousand. Shanghai is the receiving and shipping point for export eggs and collectors bring in the eggs from the surrounding country for three days journey. Wonder how much longer it takes

HINE'S MEAT SCRAPS
AND POULTRY BONE

No successful poultry breeder can eliminate meat in some form from his chicken food. The meat scraps made by us is a highly concentrated protein food. It satisfies the natural craving of fowls for flesh food, insuring health, thrift and vigor—which means "laying hens." This meat scrap contains the necessary ingredients for building up "money-making fowls." Hine's Meat Scraps are endorsed by experiment stations and the world's largest poultry breeders. No matter if you own one or ten thousand chickens you need meat scraps. Just write us and we will send prices and a sample.

Sold on its merits.
If not satisfactory money refunded.

HINE BROS. CO.
Manufacturers
4023-37 S. Ashland Ave., U.S.Y. Chicago, Ill.

the average Chinese poultryman to collect 1,000 eggs than it does an American farmer to get a case? Careless exposure to heat and bad odors will spoil a perfectly good fresh egg in a few hours; imagine a three days journey for eggs in China. After the eggs are graded and packed for export in Shanghai, it takes 28 days steamship trip to land them in San Francisco, and then more time to get them marketed through usual channels, (as long or longer than for domestic eggs). If a Chinese egg is not less than five weeks old and probably over three months old when it lands in San Francisco, how can it be a "fresh" egg?

* * *

Charity should begin at home and so should missionary work. In every American city, town, village and hamlet there are appalling conditions resulting from poverty, ignorance, ill-living, greed and lust. There are poor and deserving and poor and undeserving who need help and enlightenment and should have it. There is privation, misery, child-labor, sickness and crime; all caused by ignorance, poverty, hardship and ills without number that should be remedied. Our good people help some it is true, but prejudice hinders helping the many or helping all. "Jones is a drunkard and undeserving." "Smith is a criminal and ought to be in jail." "She is bad, we can't help her, she's too brazen." And so it goes all along the line while we subscribe thousands and millions of dollars to help the equally "undeserving" in foreign lands who don't want to be "uplifted" and who if unlifted become a problem because they seek to meet and intermarry with us as equals. No one seems to consider why "she" is bad and brazen or what were the conditions that made her so. Perhaps she may be more sinned against than sinning and who is qualified to fling the first stone? Isn't the badness a symptom of brain sickness and the curse of ignorance, poverty and bad environment? Isn't "Jones" the drunkard really a sick man instead of an evil one and isn't he poisoned with alcohol that someone sold him at a profit? Why is "Smith" a criminal and isn't it just possible that his is a case of community-caused sickness also? Aren't we all just a little bit responsible? Are we charitable at home? Isn't there a lot of room for missionary work right in your own neighborhood if you will take pains to clean your own mind and heart of petty prejudice and the self-satisfied "I am holier than thou" spirit? We are too eager and ready to employ lawyers and start litigation. Too eager to make laws and prosecute those who break them. Too eager to send the sick and diseased to jail, when we should be helping to remove the cause of such diseases and seeking to aid the poor victims to recover. Our jails make criminals, never cure them. Our country schools, to which we so often "point with pride," are a disgrace to the nation and a seeding ground for much evil. Shake the scales from your eyes and look about you. To those who have the will to see, sight will be given and we warrant that you will be amazed and appalled by what you see. Begin charity and missionary work at home, in the neighborhood and in the church. Social ostracism, punishment, jails and public charities (?) have been worked for years and the evils are still with us. Why not get together, forget neighborhood differences, petty gossip, prejudice, meanness and smirking public charity, and strive to get at the root of the evil and to cut the cancer out of the vitals of the home community. Try a little real brotherly love and real charity that does not offend and antagonize the recipient. Strive for better home government, better schools, better education and better conditions in and out of the home. Cure the sick ones with kindness, good example and helpful education and work. Use preventive measures more and the jails less. Just because we have been trying to work the cart in front of the horse for a hundred years or more with little success, is no reason why we should not strive to find and try a better way, especially now that we have a chance to know better and the trend of the times is that way. Then too, even if heredity does do it, we should not visit the sins of parents upon the children.

* * *

PROGRESSIVE POULTRY PAPERS GUARANTEED CIRCULATION

Modern advertisers rightfully expect the publications in which they **buy** space to guarantee and prove the circulation of each and every issue. Certain such papers are known as the **Progressive Poultry Papers.** Each publisher of such paper is progressively atriving to furnish their readers with live, scientific, up-to-date reading matter and agrees to prove his circulation, promote and protect the advertisers interests by refusing objectionable advertising. It will pay advertisers to get acquainted with these papers. For list of papers, rates and circulation information address

when there has seemed so often to be cause for funeral tears?

* * *

Viewing the contest for place on the A. P. A. Executive Board from Massachusetts, one wonders what there is so attractive about holding office in the A. P. A. that makes men cling so tenaciously to the job and work so hard for re-election. The game never seemed to us to be worth the candle. If "honor of position" is all that is sought, it would seem that a brief term in office ought to satisfy. Yet, from various sections of the country we find men constantly striving for re-election and spending time and good money in the effort. Why? What is there about holding office in the A. P. A. that makes some members appear to want such a place as a life job? Apparently we have perpetual candidates in Massachusetts and in Texas.

* * * *

A good many hatcheries report low fertility and poor hatches in March with more nearly normal results in April. Demand for day-old chicks unusually good, orders booked well ahead, and in some cases not possible to supply the considerable number of chicks wanted. A number of plants are also offering day-old guineas, several varieties of ducks and even turkeys. The business of commercial hatching by skilled incubator operators is developing rapidly and showing strong, healthy growth.

* * *

Don't neglect variety foods for the small chicks. Keep the broods on clean ground. Give them a grass run. Supply short sprouted oats. In the early days rolled oats, coarse oatmeal, cracked wheat, shredded wheat, bread and cracker crumbs, boiled rice and raw potato are all relished and help to start the chicks well. Keep the chicks comfortable and happy. A good home-made chick food that can be ground in an ordinary hand mill may be made from: best flint corn, 4 measures; best hard wheat, 3 measures; best heavy, clipped, white oats, 2 measures; best, sound, heavy barley, 1 measure. Mix and grind all together so that coarse particles are size of commercial chick food. Feed coarse and fine together in box hopper. It is not necessary to sift out the hulls. If desired, the granulated portion can be sifted out and fed in an automatic feeder.

* * *

As the sun warms things up don't forget that shade is essential to chick comfort. Board shelters, tents of awning cloth or old canvas and shelters of evergreen boughs may be used to advantage for the growing chicks. Many a good chick has been spoiled in a sun-baked field without proper shade and shelter.

* * *

At this season we like to set hens out-of-doors in some sheltered spot. Make the nesting boxes or barrels with a rain-tight roof and a rat-tight wire netting bottom. Place the nest on the ground and fill in a little damp earth before putting in the nesting material. Be sure to dust the hen with a good insect powder at the start of the hatch and

just before the close. Spray used nests with a good mite killer before starting a hatch. Mites will kill sitting hens.

* * *

Fine appearance of goods when delivered goes a long way in helping to satisfy a customer. The impression made by the goods on arrival is always a lasting one and it sticks to the customer's memory whenever he considers making another purchase. Many a shipment of eggs or fowls has proved disappointing to the purchaser, not because they were not good, but because they did not make a good impression when received. Good eggs in a poor carrier or mixed lots of eggs, don't look as good to the buyer as well-selected eggs in a good, neat package. A good breeding bird can be spoiled in appearance by shipping in a crowded, ill-made, and even dirty box. His poor arrival will be remembered for a long time, even if he makes good. Use care in making shipments, send all goods out in good condition so that they will arrive in good order and create a good impression to be remembered by the recipient.

* * *

We needed a new incubator in a hurry early in April and telephoned Manager Prouty of the Cyphers Boston Branch to ship us one rush by express. It arrived promptly and in good order, neatly packed and crated. When uncrated its fine appearance excited favorable comment from a visitor who was present. Not only that, but everything was "ship-shape" and ready for business. In less than four hours we had it up to temperature and ready for regulation. There is a pleasure and satisfaction that goes with working with such goods that is never experienced when one gets a machine that looks as if slapped together any old way and packed in slipshod fashion. Same feeling you have working with Standard-bred fowls instead of mongrels.

* * *

The great volume of poultry remedy advertising to be found in foreign poultry publications would lead one to believe that poultry diseases must be much more prevalent in the old country than in America. Possibly intensive methods and frequent showing have much to do with susceptibility to disease and the frequency thereof. It is a point to be borne in mind when considering the importation of eggs or breeding stock. We have an abundance of poultry diseases in this country at present and plenty of work to do to get rid of them. Already we have imported a fine assortment of insect pests to harry the trees and injure the farm crops and the human diseases of the Old World and the Far East are becoming altogether of too frequent occurrence in this Land of the Free. It don't help a whole lot to lock the doors after the pests get in, yet it is better late than never, though better never late.

* * *

We don't suppose that H. H. Stoddard will ever agree with us that there is danger in filth—even for poultry. Nevertheless we are "agin" filth, especially against encouraging poultry to feed in and on filth.

He maintains that fowls are normally dunghills, bred to thrive on the dunghill, but we doubt that. The **Gallus Bankiva** as far as we can learn, had, in the normal native state, habits not unlike the grouse and pheasants of today. It was naturally quite a cleanly bird. That it degenerated to a farm scavenger and dunghill habitue was largely the fault of those who kept fowls where good food range was not plenty, left them to hustle for a living and forced them to fill up at the dung piles or go hungry to bed. Filth, of course, is only matter out of place, and as fertilizer or in the dung pile it is quite good in its place, but scarcely to be commended as an article to make eggs out of for human food.

Eggs acquire a taste from the food a fowl eats. We don't believe that fowls habitually scratch over and eat their own dung unless there is something wrong with them. Of course, in a country overflowing with insect life the droppings might become quickly populated with bugs and maggots that

NEWTON COSH
Manager of Poultry Department

fowls consider edible and desirable. Then the droppings being sheltered might prove a more convenient foraging place than out in the broiling sun.

Market poultry growers know that when a flock of capons begin to eat their dung there is something wrong with them and such birds don't develop into prime first quality stock. Chicks that form the abnormal habit of eating paper, brooder felt and droppings, seldom do well. There is something that they need that they lack. The thing to do is to find what is needed and supply it before the habit becomes fixed. For similar reasons some children acquire the habit of eating chalk and slate pencils or other substances not recognized as normal in the diet. It is safe to assume that when fowls eagerly scratch over and eat portions of their own droppings, there's a reason. We have had confined fowls do it and those which were short on some foodstuffs, but we have one 10x16 foot house in which 30 adult fowls have been roosting and laying for six months and the droppings beneath the roost remain undisturbed and will until we use 'em on the garden. Why? We think it was because all their wants have been well supplied. But some flocks will and some flocks won't, and there the matter rests. Even the hog is a cleanly animal if given a chance, yet a lot of hogs have to live and thrive in a wallow of filth.

* * *

Most of us have noticed that on a new farm, with new equipment and new soil most poultry plants run pretty smoothly for quite a while. Then things generally begin to go wrong. We have a notion, frequently voiced by us, that failure to keep the soil sweet is a common cause of trouble. Of course sunlight is a great factor in disinfection and keeping things sweet. In a country where the sun fairly bakes the earth for a goodly portion of the year and where the soil leaches with every rain to a considerable depth, it ought to be easy to keep the soil reasonably sweet, but it can't be so easily done in all climates or all soils.

* * *

Not so very many years ago you could find on most farms (still can on many today) an old-fashioned privy located uncomfortably near the well or spring. You were told that it couldn't possibly do any harm and the water was clear and cold. Of course now and then some member of the family, or visitor, had typhoid or dysentery or something else, but you couldn't blame the water, now could you? You bet you could! That is just where the blame could be laid—to the water contaminated by the seepage of privy filth. But, said Mr. Farmer, why isn't everybody sick that drinks the water? Of course there were cases of sickness and death, but mostly it was blamed as a visitation of Providence, but not because of the house by the well curb. No one can explain why some are made ill by infected food or water and some are not, or why those immune at times are infected at others. There is a state of body, or mind and body, known as susceptibility and another as immunity. When the former reigns you become infected and sick while when the latter rules you escape. Who wants to take undue chances?

Modern sanitary science has worked wonders in preventing disease. Protecting the water and food supply has stopped many cases of disease at the source. Today an army would not consider it safe to permit bathing, washing or the use of sanitaries at a point upstream from the camp. We have learned something about contaminated water in the past few years. Maybe we will learn something about contaminated soils in the years to come.

It is noticeable that where intensive systems prevail there you commonly find poultry diseases abundant. Some poultrymen cannot now produce eggs that will hatch livable chicks. Some have a great deal of rearing trouble.

300 LICE Or More on One Hen

is by no means uncommon. No one would expect to fatten a steer with that number of "ticks" sucking his blood, but many expect the old hen to go ahead shelling out eggs while lice and mites are sapping her very life. We have counted over 2000 dead lice under a row of ten hens, on a roost board painted the night before with Lee's Lice Killer. This great killer does double duty—contact kills mites, lice, bedbugs, etc. about the roosts; the vapor kills lice on the chickens sitting over it. Put up only in airtight cans. For sale at over 10,000 towns.

Three sizes—35 cts., 60 cts., $1 00. Poultry Book free.
GEO. H. LEE CO. Omaha, Nebr.

YOUNG CHICKS

die of bowel trouble more than any other cause. It is estimated that of every 1000 chicks hatched each year less than 400 reach marketable size. Germozone users raise, usually, 90% of chicks hatched. Germozone keeps the bowels regular. It prevents diarrhoea from overdrinking of water; from eating musty or spoiled food, etc. It should be given in drinking water twice a week from the day they are hatched. It stops the loss. Every chick that dies cuts badly into the profit from the rest. Every chick saved will pay the cost of a bottle of Germozone.

One size only, 50 cents, at dealer's or postpaid.
GEO. H. LEE CO. Omaha, Nebr.

GERMOZONE'S Big Value

is not so much in its great efficiency as a remedy for roup, canker, chicken pox and other diseases of poultry, but it is the greatest bowel regulator in the world for either poultry or stock (including pet stock), counteracting, especially, bowel troubles due to musty, spoiled or improper food. With man, fowls or animals, regular bowels means health. Continued irregularity means some sickness, difficult to cure if not fatal. Thousands give Germozone regularly twice a week to chickens, young and old, at the same time having it ever handy as a ready remedy for other diseases. Sold by dealers or postpaid. One size only, 50 cents.

GEO. H. LEE CO., OMAHA, NEBR.

Some only get a "good season with poultry" once in every three or four years and the balance of the time are barely able to pull through with a burden of high mortality and heavy losses. The men who observe reasonable cleanliness, common sense resting and sweetening of the land after poultry crops, practice prevention far enough ahead to prevent trouble, continue to have good results season after season. We believe that it pays to rest and sweeten the soil used for poultry.

* * *

We don't hold any brief for artificial incubation and brooding. We believe that hen hatching and rearing, when well conducted, is conducive to maximum values in the breeding stock. But, we do think it is arrant nonsense to habitually condemn the use of incubators and brooders as the parent of all poultry ills. There are mighty few people these days who are not sufficiently intelligent to successfully operate the modern incubator and brooder, if they will take pains to secure good eggs and follow instructions.

While we lean toward the assumption that the naturally hen hatched chicken may possess some indefinable virtue that its incubator hatched cousin does not have, we have never been able to prove the case in our own work. Every year we have incubator chicks. We, as a rule, get fine hatches of strong chicks out of a modern incubator and they look quite as good as any chicks we ever saw, no matter how hatched. They stand shipment well. They live and thrive in brooders with almost no mortality, not only for us but for our many friends. Now and then someone has trouble with a brood. Now and then we find a hatch that doesn't seem to be "buttoned up right." Once in a while, in dissecting an adult bird, we feel certain we can tell whether or not it was artificially hatched and brooded; but most times we can't. Of course modern machines are not entirely "fool proof," but they are nearly so and artificial incubation is a very old art, with very little that is really new about it. The modern machine simply has modern labor saving and fool proof devices, that's the main difference from ancient methods. When we find someone everlastingly harping on the evils of artificial incubation, we usually learn that he has never yet used a really good modern incubator and brooder. Then, too, there is a certain knack in handling artificial incubation and brooding that seems to be born in some folks—a sort of hen sense. Good, sound breeding stock and good eggs go a long way toward making good chicks, apart from the manner of hatching.

Current News of the Poultry World

by J. F. Shureman

Zenas Deer and J. B. Butts have acquired several hundred acres of land about six miles from Galveston, Tex., and will establish an extensive poultry farm.

Pheasant raising is to be tried out at the Ohio State University under the direction of Prof. F. S. Jacoby, head of the department of poultry husbandry. It is to be determined whether or not pheasant raising is profitable in Ohio. If there are indications that it will be a profitable business, the department will be maintained at the University.

Poultry raisers of Missouri can now go to school and stay at home at the same time. A complete correspondence course of twenty-four lessons in poultry husbandry is now offered by the State Poultry Experiment Station to any resident of the state.

Claude Dale, of Twin Bridges, Mont., has invented a new electrically heated incubator.

In an address on poultry culture, delivered in the Chamber of Commerce rooms at Meadville, Pa., recently, W. Theo. Wittman, the well-known poultryman and lecturer of Allentown, Pa., is reported to have made the statement that "within the next two or three hundred years the hen will be laying 365 eggs a year, or one every day, Sundays and holidays included." As a genuine optimist, Bro. Wittman sure takes front rank.

A big poultry farm is to be established near Moosejaw, Sask., Canada, with William Grayson as the financial backer and George Cumming as the manager.

"The Santa Rita" and West Poultry Plants, at Montgomery, Ala., have been consolidated into one, bearing the name of the former and under the management of Cornelius Betz and Mrs. Robert West. It is planned to make this one of the most complete and up-to-date poultry farms in the country.

According to Professor Pren Moore, of the department of poultry husbandry of the University of Idaho, one of the greatest dangers confronting the poultrymen of that state is tuberculosis in their flocks. Professor Moore has examined many flocks and has found that in very few cases have the lungs of the fowls been affected, but the disease has been confined almost wholly to the intestines. This, he says, is an indication that the birds have contracted the disease not by breathing foul air, but by eating food which they gather from the ground on which tubercular hogs or cattle have been kept.

Members of the Lewis and Clark poultry association at Helena, Mont., are agitating the matter of either selling eggs by weight or making the size a consideration in the grading of eggs. The association expects to take definite action at its next meeting.

A large shipment of Chinese eggs, direct from Shanghai, China, was received by an Indianapolis poultry and egg company the latter part of March. The eggs cost 7 cents per dozen in China and were placed on the Indianapolis market at 15 cents. They arrived in good condition, but were smaller than the eggs produced in this country. Forty

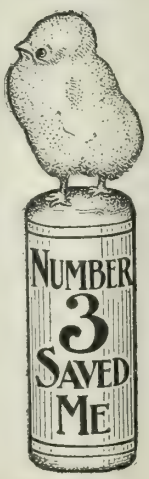
SAVE THE CHICKS



White Diarrhoea **cured** by **Prescription No. 3.** J. C. Fishel says "It does the work."

White Diarrhoea **prevented** by **Prescription No. 5.** G. Owen says, "The only thing worthy of the name."

White Diarrhoea **avoided** by feeding **Baked Biscuit Meal.** Supt. Teebs, The Coombs Poultry Farm, says, "Of 100 chicks hatched in Feb. I lost only four." He feeds Baked Biscuit Meal from the first feed.

Big box either No. 3 or No. 5, 25c; both, 40c. 5 lbs. Baked Biscuit Meal and a box of either No. 3 or No. 5, 50c; all three, 65c, and your money back after using if not satisfied.

Insist on your dealer keeping all these and save money.

THE NABOB REMEDY CO.
Box A Gambier, Ohio

days elapsed between the time the order was placed in China and the arrival of the eggs in Indianapolis.

Tulare, Cal., is to have a factory for the manufacture of a new type of incubator.

A movement that promises to become nation-wide has been started in Elgin, Ill., by members of the Elgin poultry association. It is to be known as the Poultrymen's Protective League of America and its object is to protect fanciers and the general public from being defrauded by dishonest poultrymen. Eugene M. Bishop, of Elgin, was the originator of the movement.

The secretary of state has issued incorporation papers to "The Prospect Poultry Farm" of Freeport, Ill. The company expects to establish an extensive poultry farm near Freeport for the production of poultry and eggs for the Freeport and Chicago markets.

The St. Louis Post-Dispatch will establish a permanent poultry exhibit in connection with the Zoo at Forest Park, near St. Louis. The exhibit will consist of more than 100 pens of land and water fowls, practically all of the standard breeds of poultry to be represented. More than fifty pens have already been promised by breeders. An expert poultryman will care for the birds and superintend the experimental work that will be conducted.

The youngest member of the Missouri State Poultry Association and one of the youngest poultrymen in the country is Robert Koch, 13 years old, of Creve Coeur, Mo. A year ago he purchased some breeding birds with money he had saved and at the fall county fair won several blue ribbons. He looks after the breeding end of his business and takes care of his own correspondence.

The United States Department of Agriculture has issued a bulletin on "The Organization of Boys' and Girls' Poultry Clubs" and it is desired that copies be distributed to the pupils of the rural schools throughout the country. The government is urging the formation of clubs of this kind to give a better knowledge of the value and importance of the poultry industry, and the marketing of first-class, uniform product, to teach better methods of caring for poultry and eggs and to show the increased revenue to be derived from well bred poultry.

Leo J. Broesmer, junior animal husbandman in the United States Department of Agriculture, is doing good work among the poultrymen of Tennessee. He is organizing them in the different counties, with four poultry centers in each county, along co-operative lines. He is also delivering lectures on poultry culture and doing much to encourage and enthuse the Tennessee poultrymen.

The Texas Railroad Commission has given notice that on May 12 it will consider an application by Texas railroads to amend the regulation in connection with the transportation of poultry in car lots so that one person may be passed both ways with one or more carloads of poultry.

During 1913 a total of 17,667,000 dozen eggs were exported to other countries from the United States, greatly exceeding in number and value the total egg imports.

A class of about fifty students from the New York State College of Agriculture at Cornell University, who are making a special study of the marketing of poultry products, spent three days in the early part of April in the New York City markets for the purpose of gaining a first-hand idea of the practical operation of the country's greatest poultry and egg markets.

Poultry raisers in the vicinity of Tucson, Arizona, are to adopt a trade mark to be used on all eggs produced and marketed by members of the Tucson poultry association. The eggs will be guaranteed and the trade mark will protect local purchasers from getting eggs shipped in from outside points, which is oftentimes inferior stock.

150-Chick size—2

A Real Life Saver for Chicks

You have used and heard of many types of Brooders and Hovers—but in all of them there was something lacking—that something, that would reduce the great chick loss.

Well, that something has been found and is embodied in the Simplex-Perfection Fireless Feather Brooder and Hover.

We have experimented with Simplex Brooders and Hovers in a hundred different ways and in each and every case they have proven a grand success.

If you use a Simplex Brooder your chick loss is reduced to a minimum, as has been proven by the use of same in the largest poultry plants in the country.

When you buy a Simplex Brooder—a guarantee goes with it — that you will raise more chicks and have less trouble than with any brooder on the market.

If little chicks could choose their birthday they would undoubtedly prefer to arrive when conditions were favorable; the month of June or July, when the poultryman as a rule is through with his work. There would be no profit in raising chicks hatched at that time of the year, for it would be fully six months before they matured and began laying. In order to be profitable chicks must be hatched as early in the season as possible. The old fashioned way of setting the hen and letting her raise her brood is no longer resorted to, for the old mother hen at her best is but a stupid thing, and if she did brood out her batch during the early part of March and April the chances are that she could not hover them properly, that she would desert them altogether, or lead them out into the damp grass and let them die from exposure from the weather; therefore, the modern poultryman resorts to artificial means of raising chicks.

The little chicks are helpless and cannot prevent you from housing them wherever you please, but instinct tells them that feathers will keep them warm and for this reason they take to the Simplex Perfection Feather Brooder like young ducks take to water, and they are perfectly contented and well cared for when they get inside.

Dear Sirs:—Regarding the Simplex Automatic Feeder which I purchased from you on Dec. 31, 1913, will say that I think you have solved th problem of feeding, and without a doubt it is the greatest and most practical feeder on the market. It has reduced my feed bill fully 50 per cen during the past three months and I find that m birds are far healthier and the egg yield great by a larger percentage than ever before. I tak great pleasure in recommending it to everyo and would not be without it for ten times t cost. As an example, I have one installed in pen which consists of twelve S. C. White Orpin tons. I fill it on Monday and don't have worry about my birds until the following Mo day when I refill it. Anything I may be able do for you I will be glad to. Wishing you t greatest success in the world, I am,

Yours truly,

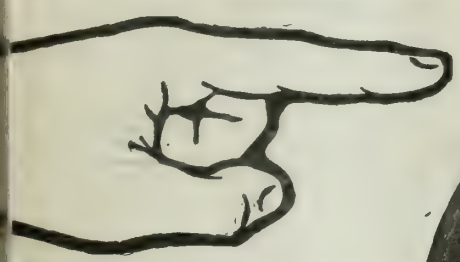
Simplex Perfection Feather Brooders Are Superior to Heated Brooders

Pages could be written on the reason why our Simplex Perfection Feather Brooders are superior to those requiring artificial heat, but suffice to give you a few of the more important ones. Less than 50% of all the chicks hatched live to a marketable age. This percentage of loss can be greatly reduced and overcome if the Simplex-Perfection Feather Brooders are used, because when using them there is no danger of fire, no danger of overheating, no danger of chilling, no danger of gases or fumes, no danger of leg weakness, no danger of crowding, no danger of smothering, no danger of bowel trouble, no oil to buy and lamps to replace.

When heating a brooder artificially you may be able to hold the same temperature for days, or as long as no chicks enter the brooder, but as soon as the chicks enter, the temperature begins to rise. This condition is caused by the additional body heat of the chicks, and often results in the loss of many chicks which would have lived had the temperature in the brooder remained the same.



When entering a fireless feather brooder the chicks take their own body heat in with them, and the feathers in the brooder distribute it equally. No matter how many or how few chicks you put into the Simplex-Perfection Feather Brooder, the temperature never rises above or falls below normal. A successful user of a Simplex Brooder put twelve chicks less than 24 hours old in a Simplex-Perfection Feather Brooder when the thermometer registered near zero, he put the brooder in a barn over night and in the morning was greeted by 12 lively little chicks ready for their breakfast. This was done simply as an Experimental test to see what could be accomplished with our Simplex-Perfection Feather Brooder. This test was as far as we or any reasonably fair-minded person would care to carry it, but it proved beyond a shadow of doubt that chicks do not require artificial heat no matter how cold the weather, as long as they are protected by feathers and no draft reaches them.

In conclusion let us say that your chicks are safe from cold, safe from exposure, safe from rodents, safe from overheating, safe from poisonous air, when they are raised in Simplex-Perfection Feather Brooders.

in every way money will be returned promptly---no excuses---no arguments---

The Mexican Athletic Club

HEAR Ye! Hear Ye! The new Mexican Athletic Club is now open for business and wants every "eligible" henman to become a member. The membership list is unlimited, the dues nothing and the benefits of the club less. Already a fine and select list of officers are in charge of the club and we promise that before long our club and its members will become world famous. The objects of this club are the furtherance of Mexican athletic sports, which, as is well known, possesses "unusual" merits for the development of the "Billion Dollar Poultry Industry." As this club has a great rival in the well known Ananias Club, we expect to pull off some stunts not only in "throwing" contests but also in the "piscatorial" line in which the Ananias Club is unusually strong. ("Piscatorial"—i. e., telling "whoppers," catching "suckers," same thing.)

* * *

At the first regular meeting of the club the following officers were elected: President, Senior Houdano; vice president, Senior Barrocco; secretary, Senior Rocco Blanco; treasurer, Senior R. I. Reddo; directors, Senior Orpintonio, Senior Wyandotto, Senior Legorno.

* * *

It was voted to have a life-size portrait painted by one of the "world's best artists" of George P. Burnham, one of the greatest Mexican athletes the poultry business has ever produced, for it was he who at the Hartford meet scored 99¾ on a Light Brahma male and 98¾ on hen. This magnificent feat has never been equalled in modern history as the talent of the younger generation runs more in the direction of vocal power, in which line some of the members are so well developed that they can make themselves heard for unlimited distances.

* * *

Senior El Toro, who by the way is the most talked of member of the club and an expert on advertising, gave an interesting talk on matters connected with poultry publicity. Among others he read an ad poem which he says has influenced more people to separate themselves from their hard earned dollars than any other advertisement he ever used.

For the benefit of our members we reproduce same herewith:

"Bunk," "Junk" and "Punk."

We have won at Crystal Palace, Philadelphia and Baltimore,
And at Cleveland, Chicago and New York have won ribbons and cups galore;
We have cleaned up the bunch in New Jersey, and trimmed them at New Orleans,
Have copped off the ribbons at Scranton, for we've "the best in the world," so it seems.

An egg every day our hens lay, and they do it the whole year around,
And much larger than any we know of, for three of them will weigh a pound;
Their flavor and color is better; that is an absolute fact;
We have fully a thousand letters that will prove it to you, by Heck.

We will sell you a setting of eggs this year that will hatch you some cracker-jack birds,
"There's a reason" again what we say here, it's the absolute truth you have heard.
Fifteen fine lively chicks from each setting is our iron-clad guarantee,
They will start you in business much quicker than anything else we can see.

As the parents of these chickens were winners at Boston and Madison Square,
They will certainly cop off the ribbons at any old show or fair.
Our price, twenty dollars per setting, is as cheap as the proverbial dirt,
So send us your money real quickly, for we have only very few birds.

And when you begin advertising you can copy our ad which you read,
Some people may think you are lying, while others believe what you said.
As bait for catching the suckers you will have to hand them some "Bunk,"
For that is the only good method by which you'll get rid of your "junk."

* * *

We mentioned before that every "eligible" henman could become a member. In order to become "eligible" you must own at least one direct descendant of a Madison Square Garden or Boston winner, no matter if it was hatched from an egg, that was laid by a hen, that was hatched from an egg, that was laid by a hen, and so forth "ad libitum," as it says on the doctor's prescription.

* * *

The official motto of the club is "Mucho vivo el toro." Every member knows what it means and it's no secret with them. We give you a tip: Look it up in a Spanish dictionary.

* * *

At the close of the meeting Senior El Toro said that in looking over some of the poultry publications he noticed unusual talent among some of the advertisers; even the weaker sex gave promise of great results with a little more knowledge of the subject. Their work was a trifle crude as yet but that they knew a good thing when they saw it. He suggested watching them and if they continued as well as they started he would vote to make them full-fledged members of the club.

L'Envoi

The Mexican athlete can throw the "bull."
(This is no news to state.)
For if he would not do it
He'd soon be out of date.

Green Ridge White Orpingtons

Cook Strain, Win at Pittsburgh Fanciers' Show, February, 1914—Championship special for best display, cock 1st, pullet 1st, hen 3rd and 4th, cockerel 1st and 2nd, pen 1st, on eight entries. Eggs and Stock for sale. Write us your wants.

Green Ridge Poultry Farms, Inc. -:- **Green Ridge, Maryland**

Are You Looking for Real Eggs?

That's what you get when you buy the famous Vibert Trapnested Red eggs. Every fowl on our farm is hatched and raised by a **mother hen,** they have been raised on free **clover range** and sleep in open front colony houses.

They are scientifically line bred according to **Government methods.** These birds are the oblong type, low tails, long backs, red eyes and our farm is **free from roup and we have never known a case of white diarrhoea.**

We gather our eggs hourly and deliver them to you promptly, unbroken—they are highly fertile, full size and weight and unblemished.

Per setting, $5, $10 and $15, special prices in hundred lots.

A few trios, cockerels and mated breeding pens for sale—all of these from trapnested hens with laying records of from 211 to 267 eggs. Write to us today.

VIBERT RED FARMS
Box 70 **Weston, New Jersey**

"MUCHO Vivo El Toro." Thus sings the poultry poet in his splendiferous and grandiloquent language, and by jinks! we feel like joining in the chorus. We have seen

Black Orpington bred and still owned at the present time by Wm. Cook & Sons, Scotch Plains, N. J.

at times magicians on the stage make the same thing appear in different places at the same time, but we had no idea that the same chicken could be bred or owned by different people in different parts of the country. In looking over the pages of the "Industrious Hen" we find that this really can be (?) the case, for on page 339 we read that the same bird which we know was bred and is still owned by Louis Lee Haggin of Lexington, Ky., is also owned by "The Womans College Poultry Farm," of Meridian, Miss. Looking further, on page 341, a picture of a Black Orpington, which was bred and owned by Wm. Cook & Sons of Scotch Plains, N. J. Again the Womans College claims ownership. Looking still further we find on page 361 an advertising design used by these people that looks a whole lot like the one we made for the Blue Ribbon Poultry Farm of Columbus, Ind. The Womans College is not the only one that can perform these feats of magic. The Bruce Poultry and Stock Farm of

White Orpington bred and still owned by Louis Lee Haggin, Lexington, Ky.

Lynbrook, L. I., has them beat to a frazzle. On page 97 of the Poultry Item they show a picture of "Sensation" and below it give a description of the bird. Now we know to a certainty that the original was bred and is still owned by A. E. Martz of Arcadia, Ind., the well known breeder and originator of the "Fashion Plate Strain" of Buff Orpingtons. We also know and have Mr. Martz's assurance that he still has the bird in his yards and a picture of same appears on a page of his catalog. It is an easy matter to take a picture from a breeder's catalog and have some artist put in a new background on the picture or change the shape a trifle and palm the bird off as their own production. The amateur who knows little about these stunts is the one who will be deceived and seldom is satisfied with what he gets in stock or eggs from breeders who will use pictures bought and paid for by somebody else.

We believe that this practice is as

Buff Orpington bred and still owned at the present time by A. E. Martz & Son, Arcadia, Ind.

wrong as it is to fake birds or to borrow some for exhibition, and every breeder who is a member of the American Poultry Association should be expelled not only from the association but

EGGS from my best pens after May 1 at half price or will sell a number of our best breeding birds at a bargain. Satisfaction guaranteed. Write for mating list. **G. A. Walker, Polo, Ill.**

his advertising also should be refused by the poultry press. The American Poultry Journal will under no condition run a picture of a bird unless the advertiser has absolute right to it or permission from the former owner.

EDITOR A. P. J.

How to Kill and Bleed Poultry for Market.

"Grasp the chicken, when killing, by the bony part of the skull. Do not let the fingers touch the neck. Make a small cut with a small, sharp-pointed knife on the right side of the roof of the chicken's mouth, just where the bones of the skull end. Brain for dry picking by thrusting the knife through the groove which runs along the middle line of the roof of the mouth until it touches the skull midway between the eyes. Use a knife which is not more than two inches long, one-fourth inch wide, with a wide, flat handle, a sharp point, and a straight cutting edge."

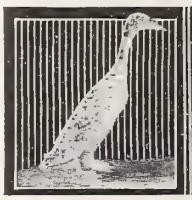
The above instructions on the proper methods of killing poultry were issued by the Department of Agriculture. At least 30 per cent of all the poultry

Original trade-mark of the Blue Ribbon Poultry Farm, Columbus, Ind., which the Woman's College Poultry Farm, Meridian, Miss., copied to a certain extent.

coming into the New York market is incompletely bled. Much of it is so badly bled that it results in a loss of from 2 to 5 cents a pound, as compared with the corresponding poultry which is well bled and in good order, continues the Department. Aside from the bad appearance of incompletely bled chickens, their keeping properties are very inferior. The flesh loses its firmness sooner; its flavor is not so good; the odor of stale flesh and finally of putrefaction comes sooner; and in every way the product is more perishable.

A very large proportion of the unsightly poultry in our markets aside from the rubbing and tearing of the skins, is caused by an incomplete removal of the blood. This is evidenced by red dots which frequently occur where the feathers have been removed, especially over the thighs and wings, or by the small veins, which mar the appearance of the neck. Generally it is the neck which shows most plainly the presence of blood in the fowl, or that a wrong method has been used in cutting the blood vessels in an attempt to empty them. The neck is the first part to discolor, becoming first red, then bluish red or purple and finally green as aging progresses.

SCHULTZ'S BUFF WYANDOTTES



Four grand pens mated. Headed by the following males: 1st cockerel and 2nd cock, Madison Square Garden, Dec. 1913; 1st pen cock, Hagerstown, Oct. 1913; 1st cock, Cleveland, Dec. 1913. A few males to spare. Eggs and baby chicks. Mating list free.

Questions and Answers

Conducted by
Prince T. Woods, M. D

Labeling Foreign Eggs.

Q. Would suggest that the poultry journals circulate pamphlets giving reasons why foreign and cold storage eggs should be labeled and that the readers sign a petition for proper labeling of eggs. It seems to me that the Government is in duty bound to give their attention to a matter that affects so many citizens. Something ought to be done to protect the producers of good new-laid food eggs.

Chicago, Ills. J. J. T.

A. We doubt the effectiveness of a campaign of circulars and effort to get a petition. A better way would be for every person interested to write a personal letter to his Congressman and to the member of the State Legislature from his district. Also to take the matter before the State Board of Health and the Pure Food Department of the U. S. Department of Agriculture.

Our present laws require that foodstuffs be properly labeled and a penalty is provided for misbranding or labeling with misleading labels. A number of States now require that Cold Storage Goods be labeled and fine any dealer who misrepresents them as fresh goods and is caught at it. Cold storage eggs are not fresh eggs. Foreign eggs from the Eastern Hemisphere can't be fresh eggs when they get to this country. To sell them without a label is undoubtedly illegal and to sell them as "fresh eggs" is criminal misrepresentation. We have already given in the editorial columns for the past few months many reasons why foreign eggs should be labeled, but there is one great reason that can't be overlooked and that is, that it is fraud to sell eggs as "fresh" that have been collected abroad and shipped a month's journey, or that have been held in storage many weeks or months. An effective method of getting after this matter would be to lodge a complaint against every dealer who offers eggs for sale that are not properly labeled.

We are disposed to believe that the heavy importations of foreign eggs are made largely with the intent to scare our own producers with the bogey of cheap foreign competition, in order to get the price of the domestic product down. The better class of trade is not going to take kindly to stale foreign eggs.

Even in a small territory, comprising only a few towns, brief witholding of eggs from the collectors effected a betterment in price during April. Collectors had been reluctantly offering 16 to 18 cents a dozen to small producers. The most of them stopped selling and begun to put down eggs in water-glass and to hatch more eggs. The result was that within a week the same collectors were offering 22 cents a dozen and later offered 24 to 25 cents a dozen and could not get enough eggs to supply their local trade. At the same time the collectors were paying 16 and 18 cents to small producers, the large plants were shipping eggs in case lots to the city and getting 24 cents a dozen at wholesale. If egg producers would co-operate they could help themselves and more readily meet cheap foreign competition.

Spring Cleaning of Poultry Runs.

Q. Is it necessary or a good thing to plow up the chicken yard and at the same time plow in lime? Does it help to prevent disease?

Cold Spring Harbor, N. Y. R. R.

A. It is necessary to keep poultry runs clean and the soil sweet. For small yards scrape the surface and carry away manure and soil so collected to use as fertilizer on garden. Top dress ground of runs with air-slaked lime or with land plaster (gypsum) and then turn over the soil as deeply as you can with a plow. Harrow and sow to oats at spring cleaning time. In fall scrape and plow again and sow to rye or wheat. Keeping the soil sweet helps in prevention of disease.

Crop Bound. Rattling in Throat.

Q. (1) Have two Orpington hens, crops very full and seem as if packed with dough. Skin under feathers has turned a dark blue color. Both appear well otherwise and eat. Both are broody.

A. (1) Trouble is crop bound, due to indigestion and to obstruction of crop. With a rubber tube passed down the gullet introduce about half a pint of warm water into crop. Work crop contents well and then invert the hen and endeavor to make her eject the crop contents without choking her; work it out by massaging crop and gullet. After

1st Cock St. Louis, Mo., Nov. 1913

BARGAIN PRICES

Ferris Leghorns

Now is the time to buy. May chicks make fine winter layers. Prices greatly reduced and prompt shipment guaranteed.

Ferris Leghorns have been trapnested for heavy egg production for many years. Will lay 160 eggs a year with ordinary care.

Splendid exhibition quality also—their record of **35 First Prizes and 41 Second Prizes** in one season has never been equalled. Winners for years at such shows as St. Louis, Toledo, Pittsburgh, Chicago, Detroit, Louisville, Nashville, Topeka, Indianapolis, Terre Haute, Grand Rapids and the Iowa, Maryland, W. Michigan, W. Virginia, Kansas, Alabama, Georgia, Mississippi and Colorado State Fairs.

Eggs and Chicks that will give you the benefit of our thirteen years' effort to increase egg production and improve exhibition quality. Prompt shipment whether you want a setting or a thousand.

Eggs from heavy laying stock; May, $1.65 per setting, $8.00 per 100; June, $1.35 per setting, $6.00 per 100. From exhibition stock; May, $3.30 per setting, $16.00 per 100; June, $2.70 per setting, $12.00 per 100. Chicks from heavy laying stock, May, 25 for $6.00, 100 for $20.00; June, 25 for $5.00, 100 for $16.00. Safe arrival guaranteed. Prompt shipment—we hatch 5000 per week—ship them everywhere. See catalog for particulars.

Breeding and exhibition stock of finest quality shipped C. O. D. and on approval. Hundreds of cocks, hens, cockerels and pullets with laying qualities bred in the bone. Fine shape—low tails, backs that are long and concave, full breasts, good heads, pure white plumage, yellow shanks. Write and let us describe them fully and quote prices.

Sold under a liberal guarantee of satisfaction or your money back. All stock insured for 30 days—replaced free if anything happens to them.

Ferris Leghorns are being bred on many of the leading egg farms and your success will be assured if you breed this heavy winter laying strain.

Send for our new catalogue and see what hundreds of our customers say about laying and exhibition qualities. Gives the complete story of how we established and improved this strain so that they win wherever shown and out-lay any other breed or strain. Fully describes all grades of stock, eggs and chicks and will enable you to get started right at small cost. Just mail a postal today—the catalog is free.

George B. Ferris, THE FERRIS LEGHORN FARM, 905 Union Avenue, Grand Rapids, Mich.

you have cleaned out crop, give hen a rectal injection of warm soapy water a few hours after the first operation. Keep away from food. After bowels are emptied give warm sweet milk seasoned with a little grated nutmeg and ginger, all they want to drink for a day or two. Follow with scant feedings of soft food and return to regular ration gradually.

Q. (2) Have a Partridge Wyandotte that has what appears to be a heavy cold, rattles in throat, breathes hard and gapes at intervals. Have given her roup cure, castor oil and other dope without relief. She eats and drinks all right and has no discharge from nostrils. Does not lay.

Ontario, Canada. G. W. N.

A. (2) Trouble may be incurable. It is evidently chronic and of long standing. Would put her alone in small open-front coop where she can have a small sheltered grass range. Feed only on hard grains. Supply drinking water and grit. Three times daily give her a tablet representing 1/1000 of a grain of arsenite of antimony. Same can be bought of Boericke and Tafel, New York City. If she does not greatly improve in from ten days to two weeks, would not waste any more time on her.

Probably Intestinal Irritation.

Q. One of my hens can't stand up, stays on side, and neck seems to be cramped up. Is it gape worms or a louse in her ear?

Dagget, Wash. R. R. L.

A. Neither. Trouble is intestinal irritation of some sort. May be poisoning from indigestion or may be due to intestinal worms. Give enema of warm soapy water to wash out bowel. Allow only a little warm milk to drink and keep the bird quiet for a few days.

Trouble with Sitting Hens.

Q. I am having trouble with sitting hens. Eight of them were given 14 eggs each. All but two of them have diarrhoea. It developed after they had been sitting for about a week. Combs and face pale and yellow. Droppings very soft dark green, tinted with yellow and pink and white. They get off the nest every day, yet they get the nest and eggs all messed up and also themselves. The rest of the flock seems good and healthy, but as soon as they begin sitting they get in this shape and by the time a hatch comes off they are not able to take care of the chicks on account of weakness, seem to lose all ambition and crush their chicks.

Have a 20x32 open-front house divided by center partition, one-half for sitters and the other for layers. Sitters have their feed before them all the time, which is whole corn, corn chops, oats and wheat bran. They have good grit, shell and water. Also have a dust bath and a large scratching shed. I throw some of their feed in litter, but they also have it before them in a box. I cannot give them free range as this would give other birds access to the brooding room. I also give them a little green bone about twice a week. House is cleaned and looked over the first thing every morning.

Arkansas City, Kans. O. W.

A. STOP feeding green bone to sitters. Also cut out all mashes dry or moist for sitting hens. Feed only on a very little wheat and plenty of good sound whole corn kept in a box always before them. Allow grit and drinking water.

Before you use any more hens for incubation purposes treat the whole flock to a dose of Epsom salts. In a moist mash use ¼ teaspoon (level) of Epsom salts per hen. Dissolve the salts in water and add full amount of water to be used in mash to this first, then mix in the ground feed thoroughly. Give another dose in a few weeks.

Be sure to dust sitting hens with flowers of sulphur or with Persian insect powder before setting and after they have been on nest 17 days. Look out for mites and keep the house free from them.

Sex of Guinea Fowl.

Q. Please tell me how to tell the sex of Guineas.

Utica, Mont. G. R. K.

A. The call of the fowl is easiest way to tell the sex. The female has a two-syllabel call which sounds like "buckwheat" or "good luck." The male uses a one syllable sound which resembles "click." Both sexes have the same peculiar rasping alarm cry. The male can also be distinguished by his gallantry

and he will usually be found on guard when female is nesting. The female talks the most and almost incessantly in the early evening at roosting time or on bright moonlight nights. The male has very little to say except when disturbed and then only a series of rather excited clicks. The appearance of strangers, dogs or hawks will start both sexes off on the alarm cry which sounds like the old fashioned wooden-cog rattle once used by watchmen and now as a toy. The call of the female may be heard at all hours of the day or at night when she wakes and proceeds to discuss matters with Guineas on neighboring branches. Some observers have said that these habits of speech remind one of human kind.

Open-Air House in Cold Climates.

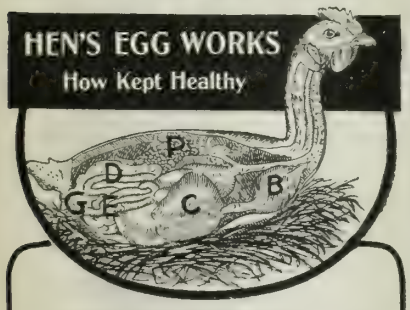
Q. I have the book "Open Air Poultry Houses for All Climates." All climates? Are you of the opinion that the open-front house would suit this climate? The lowest temperature during this winter has been around 35 to 40 degrees, but unfortunately it is a foggy damp cold. Knowing Dr. Coard, farm editor of Calgary News Telegram, I told him of the book and recited some of its contents and he emphatically declared that such a house would not do in this climate.

Of course there are people who cannot forget the medieval style of things and anything modern is opposed by them therefore I want your personal opinion. The open-air plan certainly appeals to me, but I am not in the position to experiment.

Calgary, Alberta. W. H. S.

A. Bulletins isued by the Canadian Government have advised and recommended open-front poultry houses for use in Canada. We believe you would find either the Woods or the Tolman house entirely satisfactory in your climate. They certainly would be much more comfortable than the damp chill of the ordinary type of closed house. We have had a number of reports of success with open-front houses in the Northwest and subscribers have reported wintering fowls satisfactorily in such houses where temperature fell to 40 degrees below zero. We had only five fowls in a 20x20 ft. Woods house, right on shore of a large pond and within four miles of the Atlantic coast and they were entirely comfortable, happy and laying during a prolonged spell of below zero weather this winter when the temperature fell to 24 degrees below zero.

There are a lot of people who are still afraid of fresh air in the open. They can't understand or appreciate the benefits of open-air living or its comforts. Dr. Woods' entire family including a six-year-old girl and a ten-year-old boy slept every night in the open air on a wide open sleeping porch all winter long and found it very comfortable and healthful even when thermometer registered 24 degrees below zero. It was actually more comfortable in the open-air sleeping quarters than in a cold bedroom in a house where the other rooms are heated.



DIRK'S RED MITE KILLER

Mites cannot breed or harbor where it is used. One application each year does the work. Write for special trial price.

WHAT DO YOU KNOW ABOUT A

To the first hundred readers of this Journal, who guess two of the organs of a chicken as represented by B. C. D. E. G. and P. in this picture, we will send **free** a dollar bottle of **Oculum**, if you send 25c for postage, packing, etc. **Oculum** will add from ¾ to 1½ lbs. to the weight of each chicken you raise and it will greatly increase your egg out put. Use **Oculum** and Cholera, Roup, White Diarrhoea, Blackhead and Leg Weakness will **get out and stay out.**

"OCULUM has performed miracles for us."
—Foxhurst Farm.

"I would not think of doing without OCULUM if it cost five times what it does."—U. R. Fishel.

"You surely should have a large sale for "OCULUM" when its qualities become known."
—A. C. Hawkins.

"Never found its equal."—Oscar E. Miles.
"Works like magic."—Trexler Poultry Farm.

At your dealer, 50c and $1 a bottle. If it is not O. K. money back upon request. Send in your guess today. Literature free. Agents wanted.

H. I. CO. Box B Salem, Va.

Loss of Neck Feathers.

Q. My entire flock is apparently affected with lice of some variety but I am unable to find any on the birds. Trouble starts with loss of few feathers from neck, which appear to be eaten off closely leaving just a stub or quill and it gradually extends around the neck until all the feathers are off. Skin is red and irritated and the feathers look as if eaten by lice.

Pana, Il. W. W. H.

A. Trouble probably is caused by depluming mites, although a similar condition results from feather pulling, indigestion from lack of fresh raw greens and from several parasitic diseases. From your druggist obtain some compound sulphur ointment (Hebra's itch ointment) and apply this to the affected parts. After a few days wash parts with warm water and soap. Give birds a liberal green range with plenty of shade. If you can't do this then feed fresh raw greens freely.

Alternating Males—Eggs Did Not Hatch.

Q. I am breeding S. C. W. Leghorns and have had a little trouble so far this season hatching chicks. I have been hatching with incubators the past two seasons but never had the trouble I have at present.

I placed 139 eggs in a hot water incubator February 24th, tested out 10 clear eggs on tenth day, all rest being fertile. When hatch was due not an egg pipped.

I have 20 females hatched in 1912 mated to males of 1913 hatch. I use the males alternately allowing one in the pen for a week while other is cooped by himself. I got this idea from a good authority who has a few more females mated to one male than I have.

I began saving eggs February 1st, put them in bran, little end down. Did not turn them. They were kept in basement where temperature did not go below 40 degrees. I opened eggs when hatch was due and found chicks not fully developed, but I should judge about three days behind, which same fact I noticed at testing time.

Doswell, Va. O. A. P.

A. Incubator thermometer probably did not register properly or some other fault with operation of machine. Think you make a mistake to alternate males. Would prefer to keep only one or to let both run with the flock at the same time. Would not pack eggs in bran, simply put them in box or basket in same way they usually lie in nest and let them alone until wanted. Some of the eggs were rather old to incubate well.

Feeding Beet Pulp.

Q. Would like to know if you have had any experience in feeding beet pulp for green food to chickens. How is it used? How about feeding sprouted oats. Are they likely to give chickens canker?

Springfield, Mass. E. H.

A. Dried beet pulp is not a green food. It is simply a bulky vegetable food and a waste product from manufacture of beet sugar. It will not take the place of fresh raw green food. Fowls eat it readily and if short of bulky foods will eat it eagerly. It should be scalded with water seasoned with a lit-

MRS. GUY BLENCOE, Alma Center, Wis.

tle salt and allowed to swell for half an hour or so before feeding. It can be fed plain or in a moist mash. Both plain and in mashes our fowls ate it and we found it did very well when vegetables were scarce. We used about a ton in experimental work and did not note any injurious results, nor did we note any increased production while the fowls had it. For poultry keeper who finds it difficult to get a supply of vegetables for winter feeding it makes a cheap bulky vegetable food. Young chickens did not take readily to it, but half grown chickens on a range where green stuff was scarce were quite eager for it.

Sprouted oats, if not allowed to grow too long and if not mouldy are excellent food for chicks and fowls. Clean sprouted oats, free from mould, will not cause canker. Canker is caused by a micro-organism found in certain forms of mould.

House Room.

Q. (1) How large a house will I need to accommodate 20 Buff Leghorns?

A. (1) An open-front house 6 feet wide by 12 feet deep will do very nicely.

Q. (2) I have a coop with 25 sq. ft. floor space, it is well ventilated, do you think it will be big enough for a pen of Black Cochin Bantams?

A. (2) Yes.

Q. (3) Can Bantams be fed with a poultry feeder?

A. (3) Yes.

Q. (4) Would you advise me to breed a cockerel with pullets?

Canton, Ohio. C. R.

A. (4) It all depends on age of the birds and how well matured they are. If fully matured or if cockerel is about 12 months old and pullets well established in laying, mate them.

Wants a Large Variety of Non-Sitters.

Q. I have White Orpingtons and they have bothered me all winter wanting to sit. Is there any large variety that are non-sitters?

Epping, N. H. L. E. B.

A. We don't know of any. Even the so-called non-sitting varieties produce quite a goodly number of broodies. If you take a broody hen when she first begins to stay on the nest at night and handle her properly there is no need to have much bother with broody hens. Provide a slat bottomed coop, preferably one that is swung so that it will tilt out of position when bird moves about. Put the bird in this the first night you catch her on the nest. Allow drinking water but no food for first 48 hours, then feed a very little wheat and oats once a day only. In a week she should be ready to begin laying again.

Animal Food.

Q. (1) What is animal food fed to poultry for and what is there in it that the fowls require?

A. (1) Animal food is fed to poultry to take the place of insects, worms, snails, and such small land and water creatures as they would get on natural range where same had not been pastured almost free of such forms of life. Natural animal food is not to be had at all seasons and on most poultry farms in scant supply even during the flush season. Fowls are very fond of both flesh and fish and these foods are good for them and help productiveness. Animal food contains animal protein for building the muscles of the body, keeping the fowl in good condition and helping it to make eggs. Animal foods supply desirable flesh, bone, nerve, tendon, blood and fat making material, and in practical experience it has been demonstrated that a mixed diet of animal and vegetable proteins yield much better results with fowls and keep them in better health than a diet that contains only the protein from vegetable foods. Animal protein is very easily digested.

Q. (2) Will blood meal take the place of beef scraps? How much can be fed?

A. (2) Blood meal is rather richer in protein than most beef scraps, contains much less fat and bone ash and cannot be fed as freely. Beef scraps of good quality can safely be left before fowls in a hopper, but blood meal is best mixed with the mash. Beef scraps are used in the proportion of about 10 to 15 per cent of the whole; while blood meal is rarely used above 6 to 8 per cent.

Q. (3) How long does it take good scrap to spoil when mixed with the mash?

A. (3) Good beef scrap will not spoil, if properly kept, any more quickly than other foods. If mixed with the mash, it will in hot weather cause the whole to become rancid and undesirable if kept long. Mixed with the mash as it is required to fill feeding hoppers it will not spoil under any ordinary feeding conditions. The precise time depends wholly on conditions under which it is kept.

Q. (4) Do you know anything about "Hen-e-ta" bone grit and which it is claimed supplies all the ingredients to be derived from beef scrap?

A. (4) Not from personal experience, although the manufacturers have advised us that they intend to send us a supply for test. It is said to be made of ground phosphate rock mixed with soda ash and silica and moistened into a doughy mass and then baked at a temperature of 2,600 degrees. This gives a

Rockford, Ill.

porous lava-like material which is then ground to suitable size for feeding. As a source of phosphorus and lime it should be of value but we do not see wherein it takes the place of beef scrap. From the testimonials we have seen it is evident that quite a number of poultrymen are using it with satisfactory results.

Q. (5) Do you know anything about "Succulenta" tablets to be dissolved in drinking water to take the place of green food?

A. (5) We do not. We have seen them advertised and have seen testimonials from poultrymen who claim to have used them with good results. We have also had letters asking for information concerning certain poultry skin disorders and loss of feathers, which we attributed to an insufficient supply of green food and in these letters the correspondents stated that they had used the tablets regularly as a green food substitute. It is our candid opinion that no tablet can take the place of fresh raw greens. Fresh raw greens and their contained fiber, when at the right stage of tenderness and succulence, before the fiber becomes too woody, are the kind of green food Nature intended for fowls and we consider raw greens very necessary for both chickens and fowls. If you have any doubts about it watch the fowls on young grass range or the chicks less than a week old when they are given a sod with fresh young grass on it. We have used sprouted oats freely for both adult fowls and small chicks and always with good results.

Q. (6) Is this a good mash for winter layers and for breeders?

Wheat middlings	50 pounds
Wheat bran	50 pounds
Ground oats	50 pounds
Corn meal	50 pounds
Beef scrap	50 pounds
Linseed meal	30 pounds
Alfalfa meal	30 pounds
Salt	2 pounds
Wood ashes	2 pounds

A. (6) We would add 50 pounds of Buffalo gluten feed and would cut out the wood ashes. Would also omit the linseed meal every alternate two weeks. Give them a box of coal ashes to pick over and also a box of good feeding charcoal.

Q. (7) I used 100 pounds of Purina chicken chowder beginning February 2d and my hens have laid double the amount of eggs since I started to feed it, but it smells a good deal like fertilizer? Do you know anything about it?

A. (7) Have never used it. Evidently you had good results, although the egg yield should normally improve from the first of February on.

Q. (8) Would a Woods open-front house be all right for a brooder house if windows and curtains were used in the front?

A. (8) Yes.

Q. (9) Doctor I wish you would put your picture in the paper, will you?

Anderson, Ind. F. B.

A. (9) Maybe some time, if everybody is good and the camera can be found with a lens strong enough to stand the strain.

Long House or Colony Type, Which?

Q. (1) For a flock of laying hens, which style of houses or system would you advise, the long continuous house or colony houses?

A. (1) A great deal depends upon your location, the lay of your land and the amount of acreage at your disposal. Where there is plenty of land with opportunity for large alternating ranges, the colony plan works well. Diseases are more easily prevented and epidemics suppressed where there are several colonies than where a long house is used. Where most of work must be done afoot, the long house saves labor, while if a horse or car is used in work then a well planned colony system can be handled very conveniently and with considerable saving of labor and expense.

Q. (2) Among successful poultrymen, what is used as green food and how is it prepared and fed?

Nashotah, Wis. G. D.

A. (2) A variety of vegetable foods in season. Some sow rye and oats for forage, clover and corn fodder to be cut while young and tender and put through a feed cutter, mangels, waste potatoes, rape, cabbages, waste from truck gardens, and any good cheap vegetable food. Some have special cellars for sprouting oats. Green foods and vegetables should be fed when succulent and tender. Withered vegetables are not readily eaten and those that have grown old, tough and full of woody fiber are of little value. Some throw down or hang up the vegetable food and let the fowls break it up and eat what they want. Others consider that much is wasted unless the whole is chopped up fine and so fed. With fine cut vegetable food the fowls undoubtedly eat more indigestible woody fiber.

We doubt if the advantages of cutting up the green food really pay for the labor involved, usually the fowls will eat up clean all that is of real value as food when supplied with the green stuff as it comes from the field. Where fowls forage for green stuff on range a good deal is spoiled by trampling and soiling and the birds will not eat old growth as long as young and tender food is available.

Farming Out Growing Stock.

Q. (1) What would be a fair price to pay for fowls in the fall that were hatched and raised from eggs supplied by the breeder?

A. (1) From $1 to $1.50 each for your selection, depending on size and condition.

Q. (2) In farming out chicks in this fashion do breeders use any form of agreement to protect themselves?

A. (2) Don't farm out eggs for hatching and chicks unless you have confidence in the honesty of the farmer. Better have a written agreement. You agree to buy your selection from the flock on stated terms. The farmer agrees to give eggs and chicks the best of care, to sell you your selection at terms named, to sell to no one else the balance of flock except as killed and dressed market poultry, or to only keep such chickens to supply family eggs as you may further agree upon. Or you contract to take entire flock at a stated price and dispose of the culls yourself. State your wants to your legal adviser and have him draw up a simply worded agreement, but be sure that the terms of the contract are plainly worded and equally fair to both yourself and to the farmer who is to raise the chicks. You can't get him to do the work well unless you show him where he makes something out of growing chickens for you. You risk the eggs only, but he risks his time and labor as well as considerable cash paid for food for the youngsters.

Q. (3) Chickens sell for about 13 cents a pound in the fall and wheat costs about 70 cents a bushel. What proceedure should be followed when the farmer has a pen of fowls placed on the farm by the breeder instead of receiving eggs? H. P.

A. (3) You retain ownership of breeding birds and simply loan them. Agreement should so state and should require all good eggs to be incubated and balance to be used on farmer's table, or any good eggs he could not handle to be supplied to you at market prices. Fowls to be fed according to your requirements as set forth in agreement. As greater obligations now rest with the farmer you should agree upon a rather better price for the young stock you select than where you supply eggs for hatching. You could take all produce as before at a stated price or your selection at from $1.50 to $2.00 each. If your selection was small and confined to only a very few extra good ones, you should pay more for your choice of birds. Unless you share profits and give the farmer a chance to make a fair thing out of the job, he can't be expected to do good work for you. You are practically taking him into a partnership arrangement with you, and the better work he does for you, the more compensation he should receive and that can only be worked out on a profit sharing basis.

Can Turkeys Be Caponized?

Q. (1) Are turkey males ever caponized and if so at what age?

A. (1) There is no advantage to be gained in caponizing turkeys. They mature slowly and remain soft meated for a sufficiently long time without the operation. We don't know of anyone who has attempted the operation. Turkeys are rather difficult to rear and the loss from operations would be liable to be considerable. Few raisers would be willing to take the risk, as the turkey

CAMPINES
GOLDEN and SILVER
America's Champion Blue Ribbon Strain

At Madison Sq. Garden, N. Y., Boston and Baltimore, America's three Greatest Shows, **my birds won more First Prizes than all competitors** combined, winning **17 First Prizes** and **20 Specials,** also over **20 other Regular Prizes** completing an unparalleled record.

BUFFS—BLACKS

STOCK AND EGGS AT HALF PRICE AFTER MAY 10th

Following my usual custom, after May 10th my regular prices for Buff and Black Orpington Hatching Eggs will be cut in two. This means that you, reader, can obtain eggs from Rose's Buff or Black Orpingtons for $5.00 per 15. This is just one-half what you would have paid for these very same eggs during March and April. You have never had a better opportunity to obtain eggs at so low a figure from matings containing so many winners at America's greatest shows.

May and June Chicks Win

If you were to take a census of the prize winners at the big New York and Boston Shows, it would prove that many, if not a big majority, of the birds that win the coveted awards are hatched during the months of May and June. These months are the natural hatching months. Not only do the eggs hatch better, but the chicks grow more rapidly and make the best birds for exhibition purposes.

The remarkable winnings made by **Rose's Buff and Black Orpingtons** at New York, Chicago, Boston, Baltimore, Pittsburgh, Toronto, Allentown, Syracuse, and other leading shows of the country should be ample proof of the high quality of my stock, and if necessary reassure you of the splendid position that I am in to furnish you with eggs from birds with the best blood lines in existence.

During the present season I have shipped Orpington eggs from ocean to ocean and from Canada to the Gulf. Eggs have never hatched better and reports from customers have been most satisfactory. Many have reported as high as 90 per cent fertility.

Now is the time! Don't delay; take advantage of the reduced prices and see for yourself the quality of my stock. All orders will be filled in rotation, so get yours in early. Order direct from this ad, if you want to save time. Depend upon it, I can and will please you.

Summer-Sale Price List

I want every reader of the A. P. J. to send for a copy of my Summer-Sale Price List. It tells more about my reduced prices for eggs and stock. I am offering bargains in pairs, trios and pens, at one-fourth to one-half less than the prices at which you can get them later on.

N. B.—If you have not had a copy of my large catalogue printed in colors, I will be glad to send you a copy on request.

HUGH A. ROSE, FONTHILL, ONTARIO

at suitable age for castration is at a rather critical period in its growth.

Q. (2) Could the same rules be followed as for caponizing chickens?

A. (2) Practically. As they mature slowly the birds would probably have to weigh four or five pounds each before you could operate successfully. The precise period for operating would have to be determined by the examination of several young males and noting the growth of the testicles. The time to castrate is when the testicles are just large enough to be easily seen and removed.

Q. (3) Does it change the growth and character of the fowl any?

Falfurrias, Tex. S. J. B.

A. (3) Cockerels are caponized because it renders them more docile, quiet, less inclined to quarrel and run off meat, also it results in meat staying soft and tender for a longer period. A young tom turkey is different. Young males can be herded together without much fighting, they grow best on liberal range, stay soft meated for a long time because of slow maturity, and we doubt if there would be sufficient benefit from caponizing young turkeys to warrant the additional risk of loss.

Skim Milk in Place of Beef Scrap.

Q. (1) Would you use beef scrap in the mash when you use hand-skimmed milk?

A. (1) If one has an abundance of skim milk it could be used in place of beef scrap. If supply of milk is limited would use both.

Q. (2) I use sprouted oats for green food. How long should they be when fed and how deep should the oats be in tray of sprouter?

Elmira. N. Y. J. R. C.

A. (2) Feed the oats when the sprouts are about a half inch or just under an inch long. We put the soaked oats about 1½ inches deep in tray, sometimes not over 1 inch.

S. C. WHITE ORPINGTON.
First prize Milwaukee cock, 1913; sired by imported cock, winning first prize at Springfield, Ill., State Show, 1912. Bred and owned by Mrs. John H. Harnly, Zion City, Ill.

Strong Fishy Smell in Eggs.

Q. My customers are complaining of now and then getting eggs that on being opened have a strong offensive fishy smell. I have one of the most sanitary henneries in this section and consider my feeding methods O. K. The only thing I can think of that would do it is that I may have been feeding too much of Conkey's forcing food mash or my inoculating some hens for roup with Oculum. How about this in your opinion?

A. If you have been feeding too much fish scrap in ration would expect to find more general complaint. Use of remedies does sometimes give offensive odor or taste to eggs, but would not expect it unless you have been dosing your fowls pretty liberally. The most probable cause of the eggs with fishy odor is that you have some old hen with vent gleet or disease of lower portion of oviduct and cloaca. Examine all the birds. When you turn up one that has vent gleet a strong offensive fishy odor will assail your nostrils and you have the one that produces the foul smelling eggs. Get rid of her.

Crown Bone Cutter

Cuts up scrap bones easily and quickly—no trouble. Feed your hens fresh cut green bone daily and get more eggs. Send for catalogue.

Best Made Lowest in Price

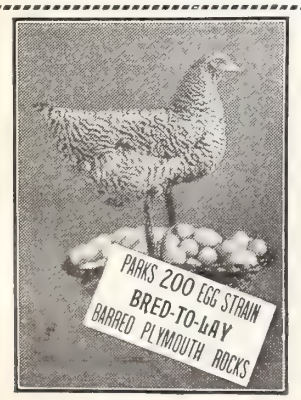
Peerless Poultry Promoter

Port Richmond, N. Y.

Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.



As Lyman C. Byce, president of the Petaluma Incubator Company, has refused the position as superintendent of the poultry department of the Panama-Pacific Exposition, at San Francisco, in 1915, the field is now open to several contenders. Charles G. Hinds, Oakland, Cal., is asking for the job. Mr. Hinds has for years successfully handled the Oakland poultry show. He has judged poultry for years, holding an American Poultry Association license. Mr. Hinds is wide awake when it comes to publicity and he has put Oakland on the map as one of the big shows of the Pacific Coast.

It is rumored that Ed. Schoel, Albany, Oregon, will be the commissioner of poultry from Oregon. Mr. Schoel was for years superintendent of the Oregon State Fair poultry show, and he has shown his fowls at nearly every fair held on the Pacific Coast circuit, which begins at Sacramento, Cal., and ends at Lewiston, Idaho. Over in Idaho I suppose that either Oscar Nelson or Miller Purvis will represent Idaho. Oscar is at present president of the Idaho branch of the American Poultry Association, while Miller Purvis is the retiring president.

British Columbia will take quite a prominent part in the big fair and it is expected that J. R. Terry, government poultryman at Victoria, will either be the man in charge of the British Columbia exhibit or he will name the man that has charge. W. M. Coats, Vancouver, will have quite a following for the position. Mr. Coats has judged poultry all over the Pacific Coast and stands well with the poultrymen. J. R. Terry is a very active man in poultry matters. He has made a big record for British Columbia when it comes to poultry. The province of British Columbia has been very liberal with the poultrymen and Mr. Terry seems to be giving general satisfaction. H. E. Upton is the active poultryman in the field for British Columbia and his lectures have done a lot to create a more general interest in poultry. Vancouver, B. C., was the market that reached the highest price for eggs last winter of any city in Canada and the United States. Eggs sold wholesale at 70 cents per dozen. British Columbia realizes the importance of the poultry industry, but that province, like the states of the Pacific Coast, has built her cities so much faster than her rural population that the surrounding country cannot begin to furnish the necessary poultry products for home consumption.

There are insect powders being placed on the market that are too strong for setting hens. These powders may be all right for hens that are running around, but when a hen is forced to stay in a small place setting on a setting of eggs, these powders should not be used. Not long ago I dusted my hens with an insect powder that was highly recommended—results, two hens out of eight quit the nest, and I found them with a bad case of bowel trouble. All hens were fed the same and there was nothing fed to them that could have caused the trouble. Not being satisfied that the lice killer had caused the trouble, I put two other hens on the same nest where the insect powder had been used and they also came down with loose bowels, and I was forced to get two other hens to take their place, but I put in new litter the next time and fresh sand in the bottom of the nest. The last two hens are all right. Some of the scientific poultrymen may disagree with me in this lice powder business and say that there was some other cause for the sick hens, but I will always believe that the smell of the lice powder did the work, and I would warn poultrymen against using any kind of powder for dusting hens unless they had seen it tried by others. I would like to have Dr. Woods' experience in such matters.

In the states of Oregon and Washington and the province of British Columbia we always have rainy Junes. It is to the readers of those localities that I want to address myself this month. The rains come in June, not in deluge like I have seen them back in the South and Middle West, but they come and we get a lot of cold, cloudy, chilly weather and, what is worse, the days get warm and the nights are cold. The June chick is our hardest chick to raise and there is a reason for it. Our first chicks come off and the youngsters take up our best coops, soil our clean yards, and then comes on the later birds. The early chick finds yards ideal for the reason that the winter rains have purified everything, lice have been well cleaned out and the conditions are ideal. The later chicks must roam over yards that have received the droppings of the early chicks and as a result the conditions are not so good as they were earlier. The early chicks mess up the coops and often they have been allowed to get lousy. At night in June the thermometer drops down, say, from eighty degrees in the middle of the day to fifty degrees at night. Results: colds, bowel trouble and a general weakening of the youngsters, which results in the saying out here that the early chicks always do the best. In the early spring the nights are cold, but the days are also much cooler than they are in June and the chick is not shocked by such a wide change in temperature. The thought I want to put forth is this: Be sure and have the conditions for the June chick, if anything, better than those of early spring. Do not run so many chicks to the hen. Clean up the coops and yards. Paint the coops with liquid lice killer and allow them to stand at least two days before putting old biddy and her young in them. Lice killers are strong and they affect the youngsters where the fumes are fresh. Be sure and see that the coops are well ventilated, yet be free from drafts. The coops that I have used are made with a lean-to room. The part with the roof is two feet long and three feet wide. The back of this coop is 12 inches and the front two feet. This gives a roof that will readily shed water. For a run I have twelve-inch boards made into a box (a part of the coop or housing place for chicks) three feet wide by four feet long. This is covered over with two-inch mesh chicken wire. On rainy days I keep the old hen and chicks in this enclosure and on sunshiny days I put a brick under the edge of the run which raises it high enough to allow

If its Eggs, as well as Fancy Feathers you want, you'll find them combined in America's Oldest and Greatest Laying Strain—

Parks Strain Bred-to-Lay Barred Ply. Rocks

The strain with over twenty-five years of careful selecting, pedigreeing and trapnesting for EGGS back of them; that are also bred close enough to the Standard requirements to win a good share of the Blue, as our 1914 winnings show.

EGGS SELECTED $5-15, $8-30, $11-50, $20-100. Half price after May 15.
SEL. UTILITY $2-13, $6-45, $12-100. One-third off after May 15.

It's not the month your chicks are hatched in that counts; it's the way they are developed. Our Treatise (sent free) Growing Big Healthy, Husky Youngsters tells how we make June hatch chicks mature almost as early as the average April hatch. **After May 15th** I will dispose of about half of my choicest breeders and at greatly reduced prices in order to make room for the young stock. This will be your chance to get Foundation Stock with but a small outlay of money. Don't write for prices on them by the hundreds as we will only have about 150 birds to spare. **EGG and CHICK Circulars Free.** Large 40-page catalogue, acknowledged to be the most complete treatise on the utility subject to date, A DIME.

J. W. PARKS BOX J ALTOONA, PENN., U. S. A.

the chicks to run at large, but I keep the old hen in. I find that the June rain is liable to come up at any minute, and if the old hen is allowed to run with her brood she is more than apt to be caught in one of the chilly showers that means a great mortality to the chicks.

These coops are so arranged that they can be put upon fresh ground as often as they get foul. There is no bottom in them; the earth is used for a floor. When the ground gets the least foul I move the coop, put in fresh sand where the mother hen makes her nest under the roof and spade the foul ground, turning under such droppings as might accumulate. By following the above directions, feeding good wholesome food, grain and plenty of green food with sour milk, I cannot say but what my June chicks have grown as well as the earlier birds.

Dr. Woods will certainly bring forth a lot of good ideas in his chick-growing contest. This contest will bring out ideas that have not been published and will be of untold good to the readers. I am going to take part in the contest, not to compete for the prize, but to simply see what I can do with a clutch of chicks. This bunch of chicks will be hatched on the 18th, when I will photograph them, as directed, and begin my feeding according to my best ideas on the subject, and what is more, I am going to use more meat in these chicks as an experiment than I ever fed them before. I saw somewhere not long ago where a Frenchman fed his chicks meat and they outgrew the grain fed birds all hollow. This little experiment I am going to tell the readers about, beginning with the next issue of the American. If there is anything in this meat feed proposition, it would not be a bad idea to demonstrate it to one's satisfaction. I know that milk fed chicks do better than those that do not get milk, and if meat fed chicks will beat the grain fed chicks, someone should demonstrate that fact. I thought that I would give these chicks a daily feed of meat. One day boiled meat, soaking their feed in the juice from the meat, the next day a little raw meat, giving commercial chick feed as a staple.

We have had a very good season here on Puget Sound, but the last week has been full of rain. I suppose the trouble is that we are trying to open the baseball season. Last week was ideal and we could have had a ball game every day in ideal weather, but this week we were forced to either go into the grandstand or use umbrellas on the bleachers, and any good baseball fan knows that in both instances such action would not suit an 18-karat fan.

William Barry Owen

In Memoriam

Death of William Barry Owen.

Just as we were going to press with the last form of this issue of American Poultry Journal, we received a telegram from Maurice F. Delano, Vineyard Haven, Mass., informing us that Mr. Owen passed away on Sunday, April 19.

Mr. Owen established the Owen Farms which has been so extensively advertised in the poultry press during the past several years. A little over a year ago at the time when the Owen Farms was recognized as the greatest standard-bred poultry establishment in existence, he was compelled to give up the active work connected with the management of these extensive farms as his health was rapidly failing him and he disposed of his interests to Maurice F. Delano, who had been with him since the establishment of the Owen Farms.

In the death of Mr. Owen standard-bred poultry loses one of its strongest supporters and the heartfelt sympathy of the entire poultry fraternity goes out to Mrs. Owen and the two children who survive him.

Entries in Chick Growing Contest.

American Poultry Journal offers $50 in ten cash prizes in a 1914 Chick Growing Contest. Annoûncement was made on page 653 of April issue and appears also in another column in this issue. You should look up the announcement and enter this great contest for the best interests of your favorite variety and yourself. Do it now. A postal card will do it.

Herewith are the names of poultry breeders who up to April 12th had written us stating that they desire to enter the 1914 Chick Growing Contest and compete for prizes. Your name should be in this list next month. Look up the rules and conditions and send in your entry. Entries have been made by:

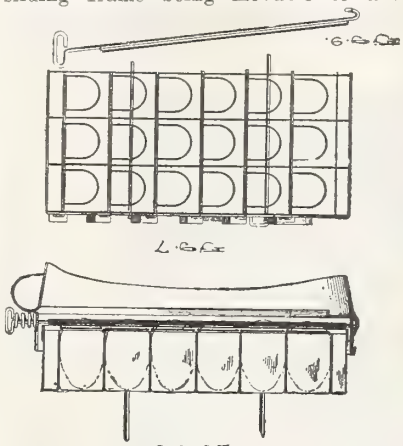
Recent Inventions for Poultrymen

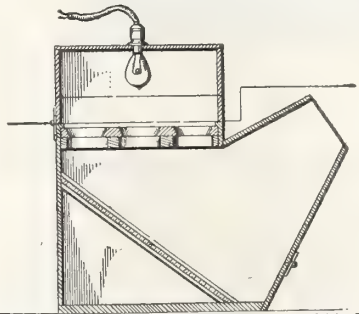
By Lester L. Sargent, Patent Attorney, Washington, D.C.



An egg-tray, of the collapsible box type, formed in an improved manner has been invented by John S. Hedden, Newark, New York, the patent rights

Egg tray, patented Feb. 24, 1914, by John S. Hedden, Newark, N. Y. Rights sold to Bloomer Bros., of same address. No. 1,088,570.

having been disposed of to Bloomer Bros. Co., of the same city in the empire state. It is made from a single blank, as indicated in the accompanying illustration. Patent 1,088,570.

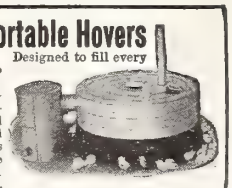


An Egg-Tray has also recently been patented by this inventor—Elbert R. Winslow. It may be advantageously used with his Egg-Tester, for handling eggs to be candled. Its novelty resides in a sliding frame adapted to coact with egg retaining means, the sliding frame being movable to and

Egg tray, patented Feb. 24, 1914, by Elbert R. Winslow, Kearney, Nebr. No. 1,088,504.

fro for allowing the eggs to be removed from the tray when so desired.

An egg-tester having a novel construction is the joint invention of Oscar J. Kogel and William T. Simmons, of Louisville, Ky. With it a large quantity of eggs may be accurately examined within a comparatively short period. The apparatus may be used with either natural or artificial light. The several eggs under examination may be simultaneously turned or changed in this candler, to the end of examining them from various angles. A casing is constructed to admit light—electric light or sunlight. It has a horizontally-disposed grate. This grate has guideways. A tray is fitted within the guideways and slidably mounted on the



Egg tester, patented March 24, 1914, by Oscar J. Kogel and William T. Simmons, Louisville, Ky. No. 1,091,353.

grate. The eggs are placed on the tray for inspection above the grate openings. A diagonally-disposed reflector or mirror is mounted in the casing beneath the grate. An inspection aperture is provided in the casing disposed in front of the mirror or rather, opposite to it, so that all the eggs in the tray may be seen in the reflector at a glance.

Prairie State Portable Hovers

Made of galvanized steel. Designed to fill every requirement of those who brood flocks of 50 to 100. Fire-proof--Positive ventilation--Automatic regulator. Burns one pint of oil in 24 hrs. Each $8.50. Full information of all kinds of brooders free. Prairie State Incubator Co., 201 Main St., Homer City, Pa.

Katonah, N. Y., Feb. 27, 1914.
Simplex Brooder Stove Co.,
Gentlemen:—
The heating efficiency of the Simplex Brooder is certainly beyond expectations, and the manner in which the regulator controls and holds the desired temperature is wonderful. In the past we have tried many brooders, but have found them all lacking when it came to heating and holding a desired temperature, but now we feel we have found the long sought in the Simplex Brooder Stove.
Woodland Poultry Farm,
P. W. Schmidt.

A second order for the Simplex Brooder was received from Mr. Schmidt March 30.

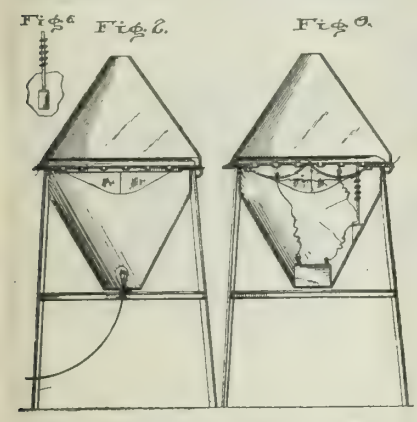
Heavy laying Rose Comb White Leghorn pullets and yearlings, $1.00 each, 75 cents on orders of 30 or more.

Write for free illustrated catalogue, containing reduced prices on everything for May and June delivery.

FUNK EGG FARM
Lyle W. Funk, Proprietor
BOX 38 BLOOMINGTON, ILL.



A chicken-roost invented by Frederick Schardt, Arapahoe, Neb., is likewise designed to destroy vermin through the use of a chemical contained within a reservoir fixed below the perch. The roost or perch bar in this device is supported by springs that normally retain it in elevated position, thus holding disk valves over openings in the parasiticide-containing reservoir, the disk valves being rigidly

Vermin killing roost, patented Feb. 17, 1914, by Frederick Schardt, Arapahoe, Nebr. No. 1,087,833.

fastended by stems to the perch. The result is that the lice killing fumes are permitted to escape as soon as fowls roost on the perch, but as soon as their weight is removed the openings to the reservoir are closed so that fumes cannot escape. Patent 1,087,833.

Elbert R. Winslow, Kearney, Neb., an improved Egg-Tester or candling device in which electric lamps are used, and which is provided with a simple circuit closing means so that when the eggs are placed within the tester the weight will close the circuit

Egg tester, patented Feb. 24, 1914, by Elbert R. Winslow, Kearney, Nebr. No. 1,088,505.

and light the lamps for the candling of the eggs. A light reflecting dome, and a light reflecting plate carried by the upper portion of the dome are features of the device. Patent 1,088,505.

Read page 774--its great

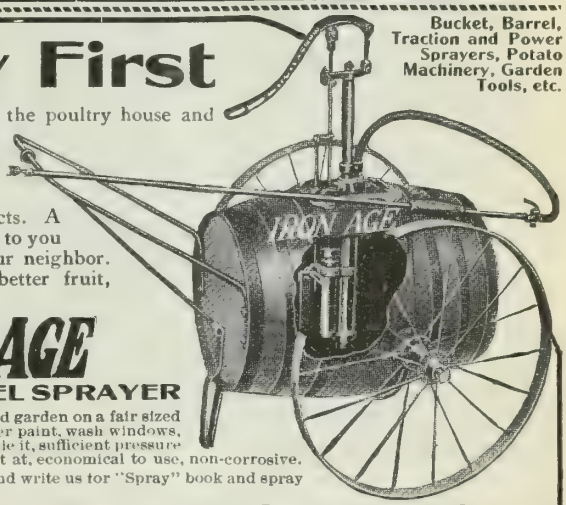
On page 774 is the big announcement

"O. K." Poultry Litter
TRADE MARK

Cheaper to use and better than Straw, Clover, Alfalfa, Sawdust, Shavings, etc.

"O. K." KEEPS THE BROODER CLEAN DRY SWEET

One lot of "O. K." Litter lasts until the chicks have outgrown the brooder without once cleaning out. In COOPS, LAYING HOUSES, COLONY HOUSES and SCRATCHING PENS, "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once in three or four months. "O. K." Litter will NOT BURN. Lice will not come where it is used. Tell us how large your house is—we will tell you how much "O. K." Litter you need. Write today for FREE SAMPLE OF "O. K." and NEW POULTRY BOOK.



O. K. CO. DEPT. 183 157 WATER ST. NEW YORK

"O. K." Trade Mark is on every bale of genuine.

Safety First

Bucket, Barrel, Traction and Power Sprayers, Potato Machinery, Garden Tools, etc.

Whitewash and disinfect the poultry house and other buildings—then lice won't bother you. Spray your trees and bushes—scale will disappear and you can control disease and insects. A scale infested tree is no good to you and very destructive to your neighbor. Cure it now and make better fruit, enough to pay.

IRON AGE
20-gallon BARREL SPRAYER

Will care for trees, bushes and garden on a fair sized place, apply whitewash, cold water paint, wash windows, wagons, etc. One man can handle it, sufficient pressure for effective spraying readily got at, economical to use, non-corrosive.

Ask your dealer to show it, and write us for "Spray" book and spray information.

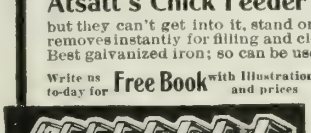
BATEMAN MFG. CO., Box 119, GRENLOCH, N. J.

ATSATT Is The MAN Who PUTS PROFIT into Poultry Raising IF YOU WANT IT, READ THIS NOW

After the practical poultry owner has cooked hundreds of chicks in the shell, and got tired of low hatches because of faulty, smoky, bound-to-run-up lamps, he pitches them all out and uses nothing but the

"Zero" Safety Incubator and Brooder Lamp

IT'S SAFE, because the oil cannot get heated; Clean because it never smokes; Reliable because it cannot run up and the temperature must remain uniform. Notice the double jacket. All metal. Fits any incubator or brooder. At dealers, $1.00, or mailed on receipt of 15c extra.

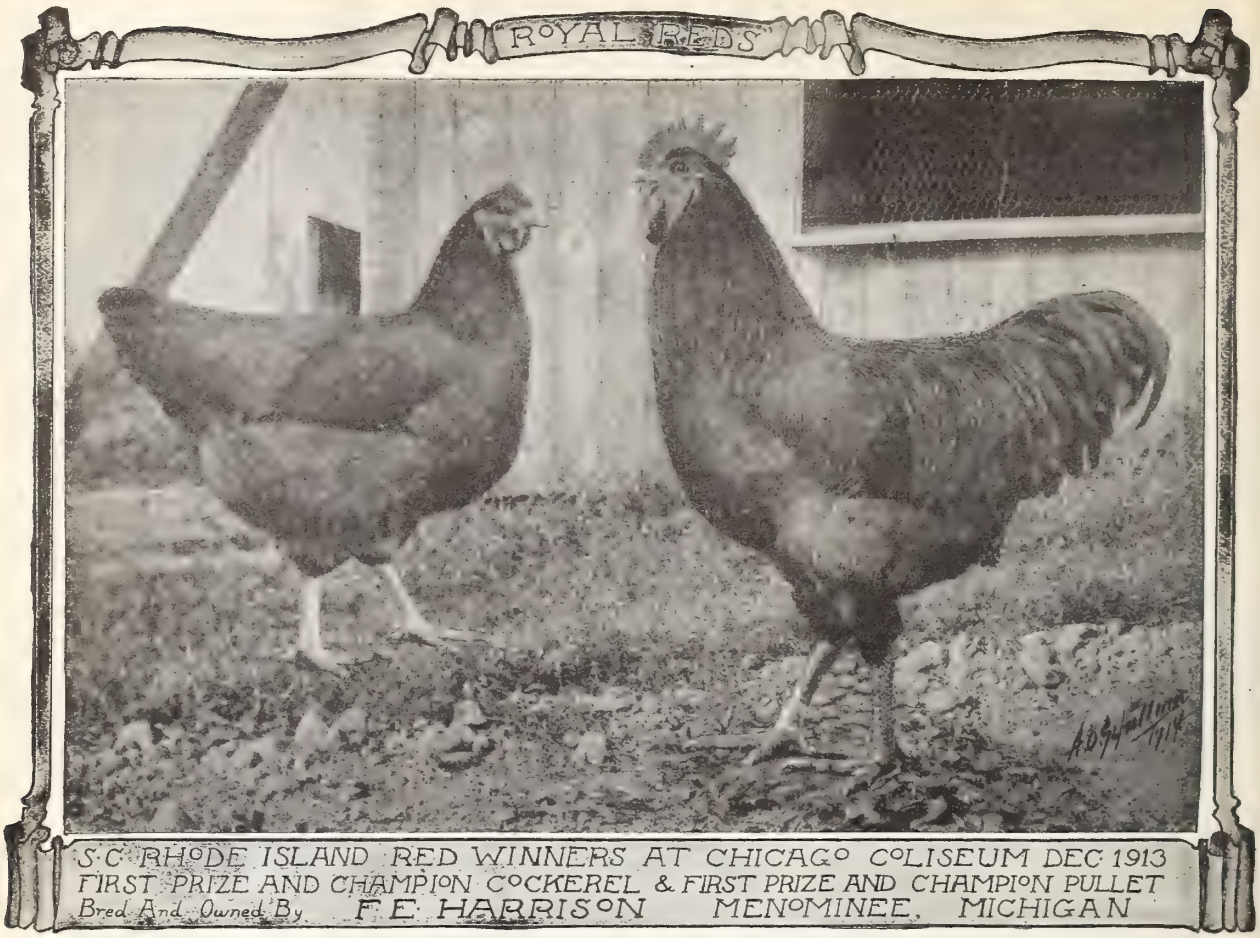


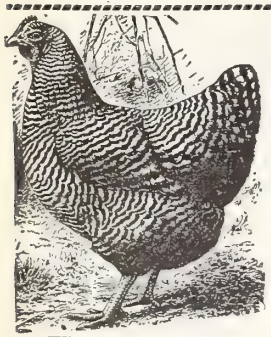
Atsatt's Sanitary Chick Fountain can't wet or drown chicks. Easily cleansed and filled, holds a quart and fits any brooder. Heavy galvanized iron. 25c at stores, or mailed for 8c extra.

Atsatt's Chick Feeder absolutely stops waste. Lots of room for chicks to get their food, but they can't get into it, stand on top of it, or scratch food out. Top removes instantly for filling and cleansing and springs back into place. Best galvanized iron; so can be used for wet or dry feed or water. 10x4 inches—just right size for brooder. 25c at dealers; mailed on receipt of 8c extra.

Write us to-day for Free Book with Illustrations and prices

Some breeders make more money than others because they've had the foresight to see that it pays to have Feed Saving, Time Saving and Money-Saving Equipment such as Atsatt Makes.





ATSATT BROS., 27 Pearl St., Mattapoisett, Mass.

One lamp, fountain and feeder mailed to one address at one time $1.70, so that you can see how fine they look.

Notes from the Southwest

Conducted by H. H. Stoddard, Riviera, Texas

Concerning Heat.

IT is worth noticing that settlers along the Gulf Coast who come here from the North and West remark, with emphasis, that they have never before seen poultry "do so well." The secret of the great egg production may be partly the absence of yards in many cases, and the consequent opportunity for the birds to procure animal food, but a more potent factor is the heat.

Nature, in the vegetable as well as in the animal world, always tries to defend a race from extinction when injurious influences begin to appear, by striving toward increasing prolificness. This principle or law has been often mentioned.

The familiar fact is that cotton, if it is crowded so closely as to be somewhat stunted and dwarfed, blossoms earlier and its blossoms are more numerous in consequence, though smaller. That the glare and heat of a semi-tropical sun is injurious to fowls to a certain extent is proved by the eagerness with which they seek shade even when quite hungry, and when a very tempting range is close by. In the morning they scatter about and forage lively, but at eight or nine o'clock they seek a shady spot, and there they stay until four or half past. It is noticeable that often, from this habit once formed, or the remembrance of past suffering, they stay under cover when with an equal degree of heat, fowls at the North would range all day long.

When saying that intense heat is to a certain extent injurious to fowls, I mean by this the importance of providing for them thick, dense shade in some form, and plenty of it. Many settlers rely on mesquite trees, and in clearing their land leave some for that purpose. Could the fowls speak they would say with Job: "Miserable comforters are ye all," for mesquite shade is not dense enough. With suitable shade by day, and an open roost at night, a high state of health of poultry can be maintained.

It may seem paradoxical that the best place in the United States to keep poultry is where they suffer most from the heat, when not properly protected, but the fact is that heat is very important. It is the keynote to success everywhere, North and South. The home of the wild originals of our domestic poultry is in a temperate rather than in a hot climate and winter not being a favorable time for young chicks, nature decreed the postponement of laying and sitting till the approach of warm weather.

I once heard a man say that in the northern states hens commonly begin laying just as the grass starts, and he reasoned that eating fresh grass set the productive organs at work. Rather, heat is the common cause which starts laying, whether or no there is fresh grass available, just as truly as it starts the grass whether or no there are any fowls to eat it. This assertion, however, does not deny that fresh, tender grass is a most excellent thing for poultry.

It is as natural for hens to just everlastingly hold up and refuse to lay in winter in the northern states as it is for water to run down hill, because all wild birds the world over must either lay and rear a brood when they are about six months old, before cold begins, or defer laying till after the cold is over.

Suppose in a state of nature, birds should lay and hatch when seven or eight months' old. What then? Why, of course, their young, if not brooded all the time, would freeze to death and if they were brooded all the time they would starve to death. It is as natural for song birds, predatory birds, ground birds, waterfowl, and all sorts of birds, to begin to lay when they are about a year old and when the grass starts, as it is for them to refrain from laying before that time. The appearance of new grass means that there has been heat. Nature says to the birds, "The rigor of the winter is now pretty much over, the fresh herbage is for your food, to which is added the insects that live on vegetation and you can fill up quickly when you leave your incubating job for a little while and by the time your younglings are out there will

We Have No Other Breed

By concentrating all our efforts in improving the qualities of our breed of fowls, we are in a position to offer you chicks from breeders possessing unsurpassed utility combined with exhibition qualities ,and at prices asked by others for the ordinary strain. Our advance during the past season in perfecting the OLD RELIABLE SPRING WATER STRAIN has been marvelous.

We have among our breeders both male and female birds that have won first prize as singles and pens at some of the leading Eastern Shows.

We guarantee chicks hatched from eggs laid by our breeders only and their safe delivery to you.

Join our army of satisfied customers. You must be satisfied before we consider a transaction closed.

Order early, thereby assisting delivery on desired dates.

Eggs for Hatching. 90% fertility guaranteed.

We also offer choice breeding cockerels at tempting prices. Mammoth Incubators. Capacity 20,000 Eggs at one sitting. Write for free illustrated booklet.

SPRING WATER POULTRY FARM
Frank J. Eppele, Prop. Stockton, New Jersey

be lots of food for them. You can go ahead laying anytime now for the forage to make eggs of is increasing fast.''

When the spring comes and the hens begin to lay, it should not, therefore, be hastily inferred that this is because cold is over, for if they are Asiastics or Americans it may be because it is deeply seated in their nature to be of an age approaching one year before laying, for during the long period of their wild state, if laying and hatching began too early, the chicks would be without the green stuff and insects that appear only with warm weather. Everything points to a temperate region with cold winters as the ancestral home of Gallus Bankiva for a long period. This is the reason no doubt why in summer pullets of a particular breed and strain will sometimes start laying at seven or eight months, while in winter others of same breed, strain, size, degree of health, and thrift, and fed in same way, will stubbornly refuse to lay until they are nine or ten months old.

* * *

The Best.

The question which is the best breed or variety of fowls will be settled just when another interesting question is solved or perhaps, we might say, two interesting questions. ''I've got the best wife in the world,'' writes an enthusiastic young benedict to his bachelor friend, or it may be his married friend, and no doubt he firmly believes it all. Later on he confidentially informs the same friend that we are blessed with just the sweetest, dearest, darlingest baby that ever woke the echoes of night.

It may not be very easy to designate just how or why the wives or babies surpass all others, but it is about as easy to decide what fowls are the ''best,'' and why they are so.

All the good points of the various breeds of fowls are worthy the esteem bestowed upon them and it is a strong argument for the culture of thoroughbred poultry that every man can find his ideal in some of the various families. Beauty, utility, courage, docility, all have their exponents, while for the man that doesn't care there remains the mongrel barnyard fowl.

A counterpart of the situation is found in the canine races. The preferences of people for one type or another of this good friend of man have resulted in the development of the big breeds and little breeds. Where no particular breed is cared for, there remains as paralleled in common fowls, just dog—plain dog. Only one other species of domestic animals has been bred into such diversity as fowls and dogs, and that is pigeons, the different types of which are a world wonder. Horses, cattle, sheep and swine have, of course, been wrought into great diversity, but not to the extent of poultry, pigeons and dogs.

* * *

Like a Watch.

Successful poultry keeping is just like a watch, of which every part must be right in order to enable the whole to run right, and one part wrong makes all the rest useless. Illustrating this, I have a case in mind where the foundation principle that all poultry, young and old, need three things every day, to wit: grain, fresh vegetable food and animal food, was ignored by people intelligent enough in other matters but accustomed to seeing poultry look out for themselves. These folks had moved to town, where they kept their poultry, young and old, in roomy yards. Fed grain in different forms, and nothing else. Gave their table leavings to a pig, which kept thrifty—but not so the birds, for the yards soon became as bare of vegetation as a billiard table. They were not actually sick! oh, no, but they didn't look right. Eggs paid but a trifle more than grain cost. Chicks never looked quite right, though a hasty observer would not notice it. Though hen hatched they somewhat resembled the poorly hatched incubator chick, ''born to die,'' a goodly number of which may be found all over the country under average amateur incubator management. Other than the feed part, management was fairly good. This family had a garden where just over the poultry yard fence, cabbage, beets and other green stuff were in plenty and growing luxuriantly, yet not a bit was fed to birds, either young or old.

Another family was fortunate in regard to both vegetable forage and insects for their laying birds which had the range of some vacant lots. They were thrifty and their eggs hatched

SHEFFIELD FARM H. B. Hark, Mgr. Poultry Dept. **GLENDALE, OHIO**

well and yielded strong chicks. Many broods were raised by hen mothers, in coops set closely "side by each" in a long row, the chicks running at large. The early broods had plenty of insects and throve well. After a while the earliest were larger than quails and there were hundreds of various sizes down to those just hatched. All had access to as much shade as they chose to use, the coops being all under wide-spreading trees. By and by, the youngest broods did not thrive well. Their feathers were rough, their wings not well tucked up, and some of the birds were just a little bit "weak and wobbly." Owner said "Never could make summer hatched chicks do well." Observing the ample range, "miteless" roosts, blooming plumage and brilliant combs of the layers, and especially the vigorous appearance of the cock of the walk, I said, "Suppose you put the coop for the hen and brood that you say are due to come off tomorrow, way down yonder under the tree at the end of the lane. It will be some bother, I know, but the experiment is worth trying. The place right around here is overstocked. The big chicks range far and wide. The size next smaller range the middle distance, and take every bug and grasshopper there, while chicks of every size down to the five days old, between them gobble the most minute insects and larvæ close by the cooks. Try a brood down yonder, where, even if the laying flock take some of the large insects, there are swarms of very small ones and larvæ of ants and such like. If the brood are well hatched, with long, fuzzy-wuzzy down, instead of short, which means something wrong, and are strong on their legs, they will continue as vigorous as your oldest broods.

* * *

The Fascination of It.

The pastime of breeding for exhibition is fascinating for the very reason, among others, that fine specimens are rare and much skill is necessary to produce them. Although like produces like, it also produces unlike, and could we establish a race that would always breed true, the excitement of the fancier would be at an end. If perfection in fowls was a thing of every day occurrence, a man possessed of money, but totally ignorant of the laws of heredity, could successfully compete with the experienced and persevering breeder. All our various breeds of fowls have been brought to their present state, as regards feathering and other conventional points by artificial selection, and in order to hold the ground thus gained the same means have to be resorted to that placed them there. When left to breed among themselves indiscriminately, the small specimens and the large ones, the indifferent and the superior, all necessarily fall from their high position with rapidity as regards fancy points and the work of many years is undone in a few. The descent is easy, to ascend is the task.

The fancier is never contented. If he should be, it would be the "death of the fancy." If the Standard requirements were easy—and this point is always brought up by somebody whenever there is a revision of the book—Tom, Dick and Harry could breed up to them, and this would be the close of the sport, the paralysis of endeavor, the end of high prices which are necessary to pay the piper and the sounding of the death knell of interest in exhibitions. The Standard of Perfection is a musical instrument which must be keyed up to a high tension or there will be no more good music.

* * *

The Market.

A correspondent writes that since I have "belabored the poor unskilled sons of toil," to use his words, as incompetent to get first-class eggs onto the market, I ought to "tell what the way out is."

His point is well taken. The writer who is always destructive in criticism but never constructive is no good. The fault I find with a few (thank Heaven that they are so few!) writers who insist that food eggs cannot be profitably produced as a regular business but must be left to the general farmers, is that while continually harping on the imperfections and repeated failures of commercial egg farms, they go on year after year without vouchsafing a solitary suggestion helpful to the poor experimenters who lose their time and money traveling a road which has proved difficult for more than thirty years. Helpful advice? Not any. They prefer to jeer and gibe and say, "I told you so."

Now here is one thing that can be readily enough done by a great many farmers, but not all. It is especially within reach of the farmer's wife who drives a steady team that stands well. We will suppose that both husband and wife go to town regularly, as both

JUST-PLUCKED EGG CO., L. C. Brackett, HOPKINS, MICH.

should do to keep from the stagnation which is the curse of farm life. Now, while he is talking with brother farmers, madam, having of course been previously very particular in gathering and keeping the eggs, takes them to a line of residences where their uniformly reliable quality has become well known. Their dates should be plainly marked, as some will be older than others and the customer may use the very freshest for the table, reserving the oldest for cooking. A good housekeeper will do this as soon as she learns the ropes and will choose the yesterlaid ones for breakfast.

MOE'S ROUND BABY CHICK FEEDER

SLIDING COVER MAKES FILLING EASY

A new inexpensive feeder for little chicks, that affords protected feeding space for a great number at one time. A great feed saver, as the little chicks cannot get into the feed and or pollute it. Can also be used waste for water.

Substantially made of the best grade of galvanized iron.

If not at your dealers, sent direct, on receipt of price. Carrying charges paid.

Canadian Warehouse: Toronto, Canada

LOUSY POULTRY CAN'T PAY

Lice-infested poultry are a constant loss to the poultryman. Lice suck the rich life blood from poultry, stunt the growth of young chicks and rob you of your well earned dollars. These pests reduce the hens' laying ability. Buy an effective louse killer and use it liberally.

DR. HESS
INSTANT LOUSE KILLER

Kills Lice Instantly. Sprinkle it thoroughly on lousy hens, rub it well under the wings and neck, put it in the dust bath, in the nests, roosts and cracks. Instant Louse Killer also kills lice on farm stock, bugs on cucumber, squash and melon vines, cabbage worms, slugs on rose bushes. Comes in handy, sifting-top cans.

1 lb. 25c; 3 lbs. 60c. Except in Canada and the far West.

If not at your dealer's, write—

DR. HESS & CLARK, Ashland, Ohio.

There is not a city in the United States that does not offer a good field for this line of operations without considering parcel post at all.

A party remarked in my hearing the other day that when living in a small western city he would have gladly paid ten cents a dozen more than market price if he could have been sure his eggs were strictly fresh. That may seem a little high, but there are thousands of persons who would willingly pay, say, five cents more as soon as they are shown the difference.

The method just described means not only transfer direct from producer to consumer, but the two parties can see each other's faces, which is a great advantage. There is a varient of this method in which both the producer and consumer retain their individuality and the latter always knows the name of the farmer, yet may never meet him personally. A proxy stands between, but not the ordinary obnoxious middleman and essentially the eggs go direct to the consumer.

It is this way. A high class grocer in a big city caters to a select class of families. Generally they are wealthy, but anyhow they are respectable and thrifty and want to know what they are paying for when they buy eggs. Producer puts up eggs in sealed cartons of one dozen each and thirty of these are packed in a common case and shipped to the grocer aforesaid. Every carton bears the name of John Smith and the date when the eggs were laid. As soon as madam learns to call for that brand and will take no other, all is smooth sailing. The producer really (by proxy) meets the consumer direct. The grocer or deliveryman is the producer's agent, just as truly as if John Smith's own son delivered the goods. If John has a favorably appearing "mug," he can have its photograph printed on a circular and enclosed in the carton. Some sort of a missive ought to be enclosed in each carton anyway, describing the egg farm and the care taken to have everything just right, including roosterless yards, frequent gathering of eggs in warm weather, special eggers employed, "no place for children," sanitary surroundings, etc. If trains run right, it should be mentioned that the eggs are shipped on the eve of the same day they are laid, the cartons being labeled, "EGGS LAID TODAY." You see, having no "yesterlaid" business about it is a nice talking point, and night transportation is a good thing on the score of coolness.

Groceries by Mail.

In regard to what I said in February issue about parcel post bringing what will amount to veritable revolution in private and public doings, some of my friends have thought I was too radical in supposing that the retail stores of dry goods, hardware, groceries, provisions, etc., were bound to suffer. I notice that such skeptics have lived where they have not gained the experience of westerners and southerners who have been for a long time buying mail-order groceries as well as the other goods mentioned above. The practice has been in vogue for thirty years and being now under full headway is lately still increasing by geometrical ratio. It is beginning to be popular at the east and north also, I am informed.

You may live almost under the eaves of a good grocery, in small city or big

one, for that matter, and the grocer, good, competent, worthy fellow though he may be, cannot compete with the mail-order grocer to save his life. And, mind you, this has been the case while expressage at pretty plump rates had to be paid, before parcel post loomed up at all. One reason, as has been shown, was the burden of the delivery wagon on top of bad debts, but there is a further cause, which is that clerks are not hindered by personal meeting of customers and everlasting chin-chin, and therefore can do up articles steadily and so work off five or ten times the quantity of goods in a day, as compared with showing a woman, for instance, $100 worth of goods to have her buy 10 cents' worth, and there is always plenty to do all the time after orders are filled.

* * *

How About It?

Whenever the question of keeping or striking out symmetry from the scale of points has been discussed, I have always stood by symmetry. All the arguments about the improprieties of cutting twice for the same defect have not moved me because certain features, e. g., back, tail, neck, breast, etc., may be pretty good by themselves, yet somehow fail to harmonize when stacked up. It is true that symmetry cannot be analyzed and explained any more than you can describe in words the individuality of a person's countenance, yet it is there all the same. You may not be able to put in words your experience of a lack of symmetry in a particular exhibition fowl.

"The reason why I cannot tell,
But I do not like thee, Dr. Fell."

There was an amusing thing once at one of the long ago A. P. A. discussions over symmetry. One judge of long practice and extensive popularity, in debate incautiously made the remark that if symmetry were stricken out "there would be no flexibility left in the Standard." Now, there had been spouting by the hour and quite an extensive vocabulary employed; but "flexibility" involved a new concourse of vowel and consonant sounds. At first numbers seemed dazed, but soon a series of grins ran around the hall like a ripple, and as soon as a member arose and asked what in thunder a judge had to do with flexibility, a roar shook the roof. Some of the old timers will remember the incident. After that the boys used to chase him around when he was judging and persecute him by asking which exhibitor he was going to favor by the application of the doctrine of "flexibility" to the symmetry section.

It has always seemed to me as though what the artist calls "pose" was a chief part of symmetry. The poise of the body upon the feet; in other words, the carriage, should be observed. If the habitual carriage appears as though the bird was balanced firmly but lightly in its tracks, then we will warrant that it is of symmetrical build all over. In symmetry there is a chance of indefinite improvement. Not so with some other points; for instance, yellow legs are yellow, and slaty blue are slaty blue, and metallic green or golden bay, or snow white feathers when attained are attained, for black cannot be more than black or white more than white. But progress in grace and symmetry has no bounds.

Chick Chats

by H. P. Schwab

May! May we now have some regular Spring weather?

* * *

Keep them coming, and keep them growing.

* * *

The best stock we have seen in the breeding yards this year, has been May, June and July hatched.

* * *

The season is later than usual, but ample time remains, we believe that most breeders hatch too early.

* * *

The most successful breeders hatch early and late, they have them just in bloom at all seasons, there is reason.

* * *

Grocer—"What are you doing there?"

Clerk—"Mr. Dobbs has ordered two dozen eggs and I'm looking him up in Bradstreets."

* * *

Turkeys are innocent birds; almost any woman can stuff them.

* * *

Buy eggs for hatching, it's the poultryman's best chance to improve his stock. In most cases they can now be bought at reduced prices.

* * *

What is bred in the bone shows up in the soup.

* * *

Our trip through the East found the breeders full of confidence and with the best stock and matings ever, superior quality was the outstanding feature noted.

* * *

We had a real New England stew with Billy Atherton and missed a shave and nearly our train besides, but then we would rather miss all, then to miss Billy. He now winks with both eyes when speaking of the next Boston Show, better get reservations now.

* * *

Drev.—get off from that heavy-stuff and give your readers the real untangled "Notes" again, they expect it from you.

* * *

At New York we were pleased to meet Mr. Harry M. Lamon the government expert. He will soon visit the Ostrich Farms in Arizona and complete a trip to the far-west, Uncle Sam is busy with the chicken business also.

* * *

There we also met Reese V. Hicks, ex-President of the A. P. A. and Mr. M. L. Chapman of the Rancocas Farms. Mr. Chapman reports a great and busy season at the farms.

* * *

Names on the coops is the important question of the day and should prevail.

* * *

Secretary Hewes of the Chicago Show has announced his list of judges. His ideas are sound and we think all lists should be announced early so the breeders can know and arrange to exhibit at the shows and under the judges they think most capable.

* * *

Williamsport, Pa., will as usual open the season of big shows November 17th to 20th. Buffalo comes next for Thanksgiving week, then the New York Palace, etc. The dates for the M. S. Garden Show have not been announced as yet, but will likely be about the usual time.

* * *

The Pennsylvania Branch has a candidate for president in Mr. Frank McGrann of Lancaster that deserves election.

* * *

We regret that Mr. H. H. Collier has withdrawn from the race for member of the executive board. Mr. Collier has many friends in the East who surely would have been glad to vote for him.

* * *

Sprouted oats are in greater favor than ever for mated birds and growing chicks, its daily use is recommended by all prominent breeders.

* * *

Colonel Nate Shaw of the Jersey Minute-men is also getting the Barred Rock fever. He has been closely associated with General Harcombe and probably grabbed off a few germs. The General since his Palace New York victory has learned the secret of undercolor and some other things.

* * *

In Mourning—"What are you wearing that thing for?" asked Mrs. Gabb when her husband came home with a band of crepe around his hat.

"For your first husband," replied Mr. Gabb, "I'm sorry he died."

* * *

Mr. M. F. Delano, owner of Owen Farms is up and doing, at the time of our visit he had over 3,000 chicks out, some of them crowing, both he and Frank Davey are to be congratulated on this grand early showing. Health, vigor and quality were features.

* * *

With all the lawyers we have in the poultry industry, there is but little lawying going on, Chas. H. Wood of Worcester, breeder of Partridge Wyandottes that "cleaned-up" at New York

Eggs and Baby Chicks from profitable layers is your only guarantee for SUCCESS in the poultry business. Isn't it a serious matter when eggs are selling for 35c to 50c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from. I breed for eggs and can furnish you stock that will lay when eggs are high. THAT MEANS YOUR SUCCESS.

PRICES	Eggs	Baby Chicks
From stock with records of better than 200 eggs and their special matings	30c each	50c each
From stock with records of 144 to 199 eggs and their special matings	20c each	35c each
From stock without records but from trapnested blood lines	10c each	20c each

Note:—There are no discounts on eggs or baby chicks in lots of less than 200. Can make prompt delivery of eggs and baby chicks. Write for sales list. My instructive catalog is free.

JOHN G. POORMAN, Box 100, TINLEY PARK, ILL., U. S. A.

WHITE WYANDOTTE WINNERS AT BOSTON SHOW JAN. 1914
FIRST PRIZE COCK, FIRST PRIZE HEN, FIRST AND SECOND PRIZE PULLETS
JOS. RUSSELL TORONTO, ONT. CANADA

In view of the fact that a majority of the best show specimens have been tried out at earlier shows, many breeders of White Wyandottes consider a winning at Boston more difficult than at Madison Square Garden, and the tendency has been to meet for Championship honors at Boston. We have seen many a Garden winner go down to defeat here, a circumstance that has made the White Wyandotte alley at Boston one of the most interesting places at the show. This season Jos. Russell, of Toronto, Canada, caused a sensation by winning every first prize except one with his grand string of Wyandottes. In addition to the blue ribbons, he also won numerous other places with birds of rare quality, which easily gave him the display prize by a large margin of points First prize hen is shown to the left of above picture in a characteristic pose, beside her is first prize cock, with first and second prize pullets in the background. First prize hen was the center attraction of the Wyandotte alley. She was exquisitely modeled, each section blending into the other with perfect harmony of curves. She carried herself as a model at all times and was pronounced the best hen shown in many years by many of the breeders present. First prize cock was another good one and in the opinion of many he embodied the correct length of body and fullness of breast to make a useful and beautiful looking fowl.

Bawden's Buff Plymouth Rocks

are big, vigorous, great layers, fast growers, finest yellow feather, yellow flesh table fowl, and the greatest exhibition strain in the world.

Every day counts.

W. D. HOLTERMAN, Fancier, Box A, FORT WAYNE, IND.

The Aristocrats are the sensation of the entire Barred Rock world. Every breeder has his eye on them. Look up my large ad. in April issue.

Newtown Giant Colony Brooders Insure Success

That is the report from practical poultrymen in all parts of the country. We present the proof below. Efficiency, economy, convenience and safety are all combined in the Coal-Burning, Self-Feeding, Self-Regulating Newtown, the Brooder which makes chick-raising easy and profits sure.

Does All We Claim—Then Some More

"After giving the Newtown Brooder a thoro trial, I am more than pleased. It does all you claim and then some more."
—RICHARD TEAGUE, Box 168, High Point, N. C.

The Best He Ever Had

"I am frank to admit that the Newtown plan of brooding chicks is the best I have ever used and I have never used a brooder that was more satisfactory. It is a great labor-saver where 200 or more chicks are brooded at one time, and they are always dry and can run under the stove and warm up at any time. Best of all, the air is always pure and fresh." —H. B. MORGAN, Amenia, N. Y.

It's Play to Care for the Newtown

"I have only fullest praise to accord the Newtown Colony Brooder. After my experience last year with that oil affair, I feel that it is only play to care for this. There is never any taint of gas and the chicks are sure of any heat they choose. I'm apt to call for much—I guess I'm fussy—but I'm more than satisfied. I say this for your benefit, not for mine, for my product is provided for to the last egg and feather."
—ALEX SLOAN, York Beach, Maine.

Chicks Do Best in the Newtown

"My Newtown Brooder is doing very nicely. I put the chicks in and they are doing the best of any I ever had."
—C. WISTER THOMPSON, Salem, N. J.

Never Had Chicks Do As Well

"The fore part of February I bought two of your brooders from your agent. Have used one since February 17 and must say it is all you claim for it, and I cannot speak too highly of it. We never had chicks do as well with little care as in this brooder. Also have one of the other coal-burning stoves and yours is so far ahead there is no comparison between the two." —R. J. ELLIOTT, Mansfield, Ohio.

One Scuttle of Coal Daily in Zero Weather

"I have had a splendid chance to test your coal-burning Brooder this last few weeks. I don't know how I could have gotten along without it. The weather went as low as 20 degrees below zero, but it had no trouble at all looking after the little chicks. Besides being the best brooder I have ever seen or tried it is by far the cheapest and easiest to operate. One scuttle of coal in the zero weather will burn it for twenty-four hours."
—ROY MATHESON, St. Marys, Ont., Canada.

The Newtown Raises His Finest Flock

"I can report that the Brooder is a grand success from all angles. My chicks are now 15 days old and the finest flock I have ever raised. Have been inspected by about 10 different poultrymen and all think it wonderful how chicks have done under your Brooder.
"I placed 700 chicks under the No. 1. They did fine and the thermometer registered five below zero when I put them in fresh from the incubator. I am using it in a curtain-front house, but am opening the curtains on sunny days. Could ask for no better results as they go to the stove as they would to the hen. The operation is practically automatic, and there is nothing to raising chicks in this, the only way."—B. B. EVERETT, Haddam, Conn.

It is too late in the season to experiment. You must get the brooder which will positively do the work, and you must be sure of quick delivery. Order your Newtown now. We will make immediate shipment from a dealer near you and the machine will surely give satisfaction.

Write now for FREE Brooder Catalog and name of local dealer.

Newtown Giant Incubator Corp'n, 21 Warsaw St., Harrisonburg, Virginia

last winter told us that there was more excitement breeding chickens than in pleading a case. Just so.

* * *

The baseball season is upon us. Next comes the fishing season, but don't let such trifles interfere with your poultry work, there is time for all when properly arranged.

* * *

Chicago friends please note.

* * *

Have you seen the 1914 A. P. J. Year Book? It is larger and better than ever and full of just what you should know. Price $1 per copy.

* * *

We now expect to remain at home for a few weeks, and then to hear from all our friends, we want news to make these columns interesting.

* * *

We have received with the compliments of Mr. John H. Robinson a copy of the catalogue of the first Poultry Show held in America at the Public Gardens in Boston, Mass., November 15th and 16th, 1849. Thanks.

* * *

The A. P. A. election is rather warm after all, the East is all worked up over two candidates for the executive board.

* * *

Many a man stops to wrestle with his conscience but few lose the decision.

* * *

Again we call our reader's attention to fake and worthless goods that are being sold as poultry-mustard, and we know where it also has been represented as "French's". French's Poultry Mustard is only sold in sealed and original packages, and this is the special brand we have recommended to our readers. Be sure you get it.

* * *

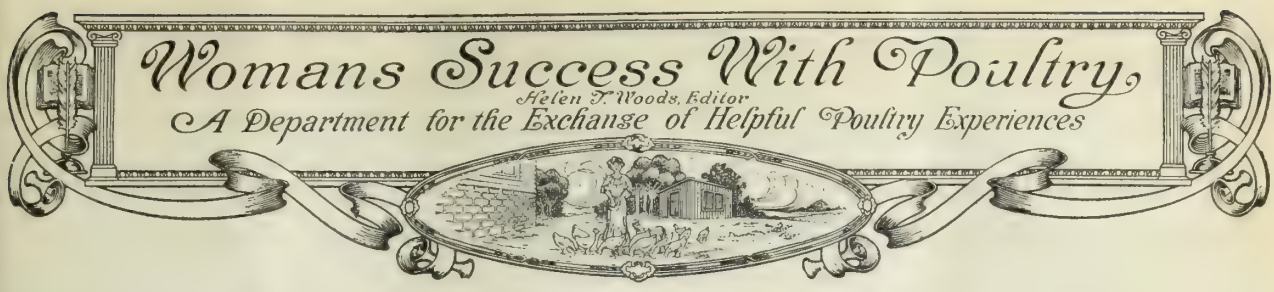
If any of our readers should have any old poultry books or standard we would like to hear from them with particulars.

* * *

The Norwalk (Conn.) Poultry Association was lately organized and will hold their first show this winter. The secretary is Mr. Charles R. Petty, South Norwalk, Conn.

———o———

Can Mail Eggs in Ordinary Crates.



CHANGE IN REGULATIONS WILL BENEFIT FARMERS AND TRUCKERS.

(Press Dispatch.)

Washington, March 15—Postmaster-General Burleson tonight announced a change in the parcel post regulations that will be, in his opinion, a great boon to the farmers and truckers of the country.

Under the new regulations, butter, eggs, fruits, berries, vegetables, dressed poultry and other articles in parcels weighing over 20 pounds and up to 50 pounds for shipment within the first and second zones—approximately 150 miles—can be packed in boxes and crates similar to those generally used when shipping these products by express.

These large parcels will be handled outside of mail bags. But packages of these articles weighing 20 pounds or less are to be required to be securely packed as heretofore, in such manner as to be safely handled in bags with other mail matter. Under these new regulations Mr. Burleson thinks the farmers and truckers will be able to ship their products by parcel post in a less expensive manner than has up to this time been required under the old regulations.

EFFICIENCY THE KEYNOTE OF SUCCESS.

BY EUNICE READ WRIGHT.

EFFICIENCY is the keynote to success in any and all business undertakings today. Thousands of dollars are spent monthly to find better and more efficient methods for conducting all leading business enterprises. What held good for method in a business five years ago is today a back number in almost every case. Surely the world "do move."

Only in poultry keeping and housework do the majority of the workers cling to eighteenth century methods. It has been said that "if Mrs. Julius Caesar were to be returned to earth, she would be perfectly familiar with existing methods of doing housework. She could wash and iron by hand just as she used to wash and iron by hand before her husband went into politics and told her to hire a girl." The only reason for this lack of progress ever given is that of the laborer's unappreciation of the value of the work. The man or woman making a business of poultry and egg production very seldom figures in the value of the time he or she devotes to the work. Nevertheless, herein lies the BIG item. So we better start with it. My time is valuable, and so is yours, or if it isn't, you better get busy and make it so. Certain it is, we can't afford to be carrying chickens from this coop to the next one through all the balmy summer evenings, for each evening so spent takes from, instead of adding to, our working capacity. No one can enlist his best energy and ability on an undertaking, when he wears his body and mind to a frazzle every evening, hot, rainy or fair, in carrying chicks from one spot to another over a five or fifty acre lot—and besides it is very conducive to the free use of language not permitted in polite society. There is nothing more aggravating than that of spending two hours time fussing over doing a thing, that ought to do automatically. About every poultry keeper is doing it though.

Look over your equipment and methods of doing your work this spring and you will find yourself taking ten or a hundred steps where only one is, or ought to be, necessary. There is almost no part of the daily work in poultry keeping that will bear inspection in the matter of time saving. Every individual item can be reduced or simplified by a little thought in search of labor saving and efficiency in poultry work.

"Egging" may be an exception, since it is something requiring great personal care in handling and packing. But even this work can be simplified by a competent, careful person—and no other should be trusted with eggs intended for human consumption.

The gathering, packing and shipping of eggs easily becomes a most interesting work to the thoughtful person as should all preparation, care and shipment of foodstuffs. In fact the "egg er" takes keen delight in day after day gathering baskets of clean, new-laid eggs, wearing the bloom which bespeaks their tender youth, packing those of uniform size, discarding any and all, eggs bearing ever so slight a soiled spot, these being immediately washed with a damp cloth to be sold as seconds. Sixty to sixty-five dozen can be gathered, sorted while packing, and labeled ready for shipment in about an hour, after one becomes familiar with the work. Much, of course, would depend on the convenience of the houses and nests. But if these are not convenient by all means waste no time until they are made so. Have the nests easily "getatable" for both hen and attendant, though the nest itself should be partly secluded. Where the flocks are large, eggs should be gathered twice daily, even though a liberal supply of nests are provided. A hen (being fe-

French's Poultry Mustard

Not a Table Condiment, But Made From the Choicest Imported Mustard Seeds. For Use With Poultry, and Prepared to Produce the Most Excellent Results. The Original Poultry Mustard in America! Don't Accept Counterfeits!

Recommended by Poultrymen. Used by the largest fanciers in the United States. See testimonials from such noted breeders as Haldie Nicholson-Edward Corning of Bound Brook, N. J., E. B. Thompson, the President of the American Poultry Association, and the largest poultry and egg producers in the United States.

(29)

male) is very apt to have a pronounced persistency in selecting certain nests for depositing her eggs, even though a dozen or more of her sisters have used the same nest for that purpose on the same morning. Broken eggs in the nest is frequently the result making not alone a loss by breakage and soiling other eggs in the nest, but fouling the nest and inviting egg eating, a habit which when once formed is really hard to break. The "egger" who knows her business, must first, last and all the time, keep the nests in ship-shape, using clean, sweet nesting material "early and often."

In gathering and shipping thirty to sixty dozen eggs daily, I have not had a complaint, every egg being guaranteed as to quality and freshness, and breakage so slight as to be negligible.

Lack of Air at Night.

Cooping the young stock at night during the summer is necessary, only for protection from heavy rains and night marauders such as foxes, skunks and the like. The ideal coop is really a roofed cage. But even where these open-air quarters are used, there should be an automatic opening that insures the chicks being able to free themselves from the cage when the first hint of dawn illumines the eastern sky. More chicks are stunted in close, hot quarters during the early morning hours when they ought to be out catching the early worm and incidentally flapping their newly feathered wings, than develop into good healthy specimens. A properly constructed bait bar after the fashion of the automatic feeders will do it. Any one with a mechanical turn of mind can attach such an automatic arrangement to a slide or opening door so that the chicks or adult fowls as the case may be, can free themselves from their sleeping quarters at an early hour.

Don't forget at this season of the year to keep a few flocks in the orchards, and around fruit trees on any part of your place. The chicks will render great assistance in abating the bug and worm nuisance. A hen has been known to eat hundreds of cankerworms and bugs of various kinds a day, and all the time she is balancing her ration to her best advantage, far better than you or I could do it for her. When a human eats what he hungers for, he rarely has indigestion because his system cries for what he needs. It is more than a century ago that scientists formulated a working knowledge of these facts, but some people still look doubtful when it is suggested that the same principle be applied to the feeding of poultry. It is a wearisome task to convince the "inflexibles," who have absorbed an idea in youth, hold and hug it throughout their lives, as wisdom-studded truth.

Even the waste of our bodily economy must be discarded, yet we cling to these "waste" ideas and customs of past centuries afraid to let go of an idea that died and mortified years ago, and consequently in this day and generation, clogs the brain cells to such an extent that twentieth century ideas look like yellow journal scare heads. It is time to wake up and absorb some of the good things belonging to present day conditions.

———o———

Lawyer—The cross-examination did not seem to worry you, have you had any previous experience?

Client—Six children.

THE HOUDAN—A TRUE UTILITY FOWL.

IN these days of changing fashions in poultry, and in the never ceasing bringing out of new and improved varieties, it takes a mighty good breed to hold its own. Of course such breeds as the Rocks, Dottes, and Reds, that having first-class utility qualities to start with, have had the right kind of strong aggressive breeders pushing them, have arrived at a place from where they are not likely to slip back. Outside of these there are many breeds competing for places in the poultry world, and among these breeds there is no better utility fowl than the Houdan. Further, while I have no desire to disparage any breed, for I am no knocker, yet I claim that in many ways, and for certain purposes the Houdan is superior to some of the American breeds, and for general utility value it is fully equal to any of them.

The much abused term, "general-purpose breed" can really be applied to the Houdan. This term is one that like Charity, covers a multitude of faults. As it is commonly applied it often means a lot of different qualities combined in the one breed although often at the expense of high quality. But in this sense it does not apply to the Houdan, for in that breed we really have a fowl that combines in itself many different qualities and traits, and all of these qualities are of the highest. As a table fowl the Houdan is in the very highest class. The meat is of the very best flavor, neither hard nor stringy at any stage, it carries a large proportion of this meat on the breast, and dresses with an extra small proportion of waste. Not only does it make a finely flavored, tender and juicy carcass for the table, but with its small amount of waste and offal it is one of the most economical fowls to prepare for the table.

The Houdan chicks are among the quickest growers, they feather quickly, and make broilers at an early age. These broilers are plump little birds, not leggy and rangy like the chicks of some of the American breeds at the same stage, but have plump and attractive carcasses.

When they arrive at the roasting stage they do not become staggy and hard in the flesh as do the cockerels of the egg breeds, but retain their tenderness of flesh until they reach a good age. Differing from most breeds, a Houdan hen will make a good roaster even when two years old, the meat remaining white, juicy and tender.

As a layer the Houdan is the equal of any of the breeds, when properly bred, fed, and cared for. The laying competitions have confirmed what most unbiased poultrymen have long contended, that laying ability is not dependent on the breed, but is more dependent on the strain, on how the layers were bred, how fed, and how cared for.

Understand that I do not claim that the Houdan is a 300 egg hen, or that all Houdans are 200 egg hens, or even 150 egg hens, far from it. Such exaggerated claims have been made for the Houdan by certain sleek individuals who used and exploited the breed for defrauding the inexperienced beginners in the poultry business, and these claims have hurt, and are still hurting the breed a lot. But I do claim that breed her right, raise her right, and keep on feeding her right, Mrs. Houdan will hold her own as an egg producer. So

Drinking Fountains

Protect your fowls from their own contamination and supply them with fresh, pure water at all times. We have these fountains in all sizes. Prices, from 15 cents for quart size to $2.25 for 4-gallon size. Sold under positive guarantee of money refunded if not satisfied. Send for catalogue today.

SIMPLEX SUPPLY HOUSE, Pontiax Building, CHICAGO, ILLINOIS

Silver Campines and White Rocks

My birds are pedigree-bred for egg-production and have won at Quincy, Ill., Illinois State Show and Illinois State Fair, Springfield, Ill., and the great Chicago Show, 1912, 1913, 1914. My Campine pens are headed by sons of a winner at the 1912 Crystal Palace Show, England (the world's greatest show), and chicks six weeks old from these pens are showing excellent regular barring of the proper width, which proves that my pens are properly mated. **EGGS** scientifically packed (not boxed) to carry safely any distance and insure a good hatch, **$5.00 per 15, $9.00 per 30,** from Special Prize Matings of either breed, and **$3.00 per 15, $5.00 per 30** from good bred-to-lay matings. Circular free.

JOE-PYE Orpingtons

"CHAMPION NEW YORKER"
Greatest Buff Orpington Sire and Show Bird in the World

Madison Sq. Garden
1913-14

1st and 4th Cock
4th Cockerel
4th Pen

In the last five years my male line has won 1st at the "Garden" four times. One of these five years I did not show, but two cockerels from eggs I sold, that year won 2nd and 3rd, beaten by an importation. This is an unprecedented record.

To this add my great win on males at the Palace, N. Y., at Boston and many smaller shows for the past three years and the fact is well established, beyond dispute that I have the strongest male line in the country. And it is a "line" I have bred—all related—not transient "sports" that happened to win but different birds of this line that have been awarded highest honors by many judges.

With this large winning at the largest shows, on males I bred, I am able this year to put together a most remarkable and consistent lot of matings. My free mating list describes pens in detail.

Guarantee on Eggs

I make the generous offer to replace all infertile eggs once free of charge.

JOE-PYE ORPINGTON FARM
HARRY STACEY BENTON, Owner
R. F. D. 5, SO. NORWALK, CONN.

well is this known in England that a Houdan first cross with several other breeds is in great demand for laying stock. Right here I would remark, that while I do not as a rule believe in crosses, considering the pure bred bird best for all purposes, that it is hard to beat either for eggs, or for a market fowl, a first cross between a Houdan male, and either Plymouth Rock, or Wyandotte females. The pullets mostly come black, and are good solid heavy birds that lay in great shape.

As a layer the Houdan has an advantage over the hens of the American breeds as she never becomes broody, and wants to lay off, hatch, and raise a brood of chicks, right at the time of year when eggs are wanted. Being strictly a non-setter she attends right to business, never letting up till fall.

Then, two, three, and even four year old Houdan hens will keep up the laying habit, although of course the older hens will not lay so many of their eggs in the winter season as do the pullets and yearlings.

The "general-purpose fowl" must be one that is a good breeder, hardy and easy to keep in any climate. This the Houdan is without question. There is no breed that will stand the extreme cold better, their small combs are well protected by the heavy crests, and the small wattles are equally well protected by the beards and muffling. In fact the Houdan might well be called "a frost-proof hen" or "the hen with the fur cap and ear muffs." Down here in Eastern Maine we do not have the best of climates, we are liable at any time to get all kinds of weather during the same day. A couple of weeks ago here, we had a variation of 60 degrees in less than twenty-four hours, from 30 above to 30 below zero, but it did not hurt the Houdan. We have a long, long winter with lots of snow, yet my Houdans are kept in what is practically open front houses, windows open all the time, doors open so that the hens can go out most of the time, and they do go out nearly every day, except during heavy snow-storms. With all this, sick or ailing hens are almost unknown.

Our closeness to the Bay of Fundy gives us lots of rain and damp weather, and I take no extra precautions to keep the birds out of the rain. They get their crest wet, soaked in fact lots of times, yet they do not seem to suffer from colds, even though some people will tell you that you can't let the Houdan crests get wet. Stuff, nonsense. My Houdans are subject to practically the same conditions as are my neighbor's Rocks, Reds, or mixed breeds of all kinds, and they really have less colds, and keep as healthy, strong, and rugged as any of them.

I never coddle my Houdans. I haven't time, besides it does not pay. My chicks, too, are raised under ordinary conditions, no more care being given to them than to any chick. They do not get much attention either. The brooders are out among the berry bushes. Plenty of chick feed is scattered in the litter, hoppers are filled, water dishes cleaned out and filled with clean water in the morning, then they are left to their own devices, generally for the whole day. If a shower comes up and they get wet, what of it? They do not seem to suffer from this method of raising, and make good birds for me. Birds that have taken the Blue Ribbons at the big shows at that. No, I do not coddle the Houdan, either chicks or

fowls, they do not need it as they are a hardy out doors fowl. Of course, I do not claim that it is good for the Houdan to get its crest wet in cold rainstorms, neither is it good for fowls of any breed to get their feathers wet in cold rains, but I do claim that such wettings hurt the Houdan no more than they hurt the other breeds.

The chicks are easily raised, grow fast, and after they get their growth are rather small eaters. You do not have to shovel the grain to them as you have to do to some of what is called the general-purpose breeds.

In addition to all this the Houdan is an ideal fanciers' fowl. A breed that gives him a chance to exercise his highest skill. The Houdan is also an ideal fowl for the amateur, tame and docile, she is an easy breed to pet, easy to keep and confine, as she is not a flighty bird in any way. Handsome and sprightly, she looks well on the lawn, or in the door-yard.

In closing, I cannot better draw attention to the value of the Houdan as a utility, a general-purpose fowl, a white-egg-bred-to-lay, bred-to-pay breed, than by quoting from a small folder issued by the American Houdan Club, the following enumeration of the principal good points of the Houdan, drawn up by a man who bred, and knew a really good Houdan.

1. Quick to grow and feather as a chick, making broilers much sooner than the Rocks, Wyandottes or Brahmas.

2. Fertility of eggs, nearly everyone producing a chick under favorable circumstances.

3. Early laying pullets.

4. Great productiveness of females, hens one and two years old laying as well as when they were pullets.

5. Quantity of eggs, size of eggs, and their pure white shell.

6. Ease of confinement, and their perfect contentment in restricted quarters.

7. Perfect quality as a table fowl, both as to flavor of flesh, and the very small percentage of waste in dressing.

8. Hardy of constitution, adapting themselves to all kinds of climates and conditions.

9. Small eaters.

10. An ideal fanciers fowl that breeds true to feather, yet challenges his skill in the production of high-class specimens, and from which it is possible to produce specimens of equal quality of both sexes with a single mating.

These are the main characteristics of the Houdan fowl, and a breed that possesses these valuable characteristics is without any doubt a true utility breed.

Home and the Table
Good Things for Everybody

Helen J. Woods
Editor

LET US BE SORRY

For those who have not invested enough physical energy in labor,
Or enough mental energy in thought;
For the person who has written a last check on patience,
Or overdrawn an account in perseverance;
For those who, with a deficit in the past,
Are issuing promissory notes on the future;
For the person who has no vacation in which to be friendly,
And is therefore declared bankrupt in the court of friends;
For those who work when they play,
And play when they work,—
LET US BE SORRY, above all things, for the person who has a corner in self pity.

LET US BE GLAD

For those whose stock of good fellowship never falls below par,
Who have the best capital, faith;
For those whose assets are within the self,
Whose liabilities are all from without.
For those who may be accepted, without fear,
At their face value;
For those who desire that their success may be profit to the nation
And no loss to their kind:
For those who purchase, by their honesty,
The bonds of good will,—
LET US BE GLAD, above all things, that there are among us just such men and women.

—M. O. BIGELOW.

THE "clean-up" movement, once an exclusively private monopoly, now a nation wide undertaking, is a sign of progression worth noting. In towns and villages, great municipalities, farm homes, streets, avenues, alleys, and byways, the spirit of spring cleaning is abroad in the land.

The goodly influence of beautiful architecture, of well laid out grounds, of well kept streets, trees, flowers and all beautiful things, on the minds and lives of the passers-by is such that even factory grounds in most localities are competing with parks in their attractive well-keptness. And it has been found to pay not alone in the better quality of work but in the greater interest awakened in the employees.

One manufacturing plant in a New England town, has, in this way, aroused practically the whole population to a keen sense of the beautiful, by its well laid out grounds, club houses, tennis courts and base ball field, as well as many groups of attractively planned cottages for employees. Prizes are offered each season for best gardens, lawns, and general attractiveness of home surroundings. The company employs a landscape gardner to advise those who desire his services. These factory people enjoy band concerts at the club house two evenings a week through the summer, with dances semi-weekly through the winter season. They conduct annual flower, vegetable and poultry shows. There are base-ball games and tennis matches on half holidays during the season.

The management has found that these things pay in more ways than one. They have had no strikes or other evidence of discontent. The general tone and uplift of the town has been marked, following the installation of these modern ideas of factory government

What holds true of large manufacturing concerns along this line holds true none the less with private individuals. We are each a very necessary and very important part of the "clean-up" movement, and in most instances the back yard, if no other part of the home surroundings, needs the enlistment of our services in its behalf. Who has not suffered from an ever present vision of an ill-kept back yard, or felt uplifted by a vista of green lawns, neatly trimmed hedges and well-kept walks? This clean-up movement is not a selfish matter. It is pre-eminently for the good of all. One man cannot clean up or beautify his grounds without benefiting his neighbor as well as himself, for usually the neighbor's viewpoint takes in the entire collection of rubbish, or it glories in the delights of a garden spot. There is no reason why the back yard should not become a thing of beauty and a joy forever, with a little time and effort expended to make it so.

First, remove the rubbish. "Dumps" of some kind are probably necessary evils at the present time, but do not in the interest of human uplift, have one in your back yard. The clutter in many dooryards is reason enough for that "tired feeling" in man, woman or child who must view or walk daily through it. The rubbish removed, go about the task of making a plot of grass grow where none grew before, start a hedge or group of well selected shrubs. Have a garden of both vegetables and flowers if possible. A garden seat under the spreading shade of a tree, or vine covered arbor invites rest and enjoyment of home and its surroundings.

Third prize Barred Rock cock at Madison Square Garden, 1913. Owned by Yama Farms, Napanoch, N. Y.

First prize Black Minorca cock at Madison Square Garden, 1913. Owned by Yama Farms, Napanoch, N. Y.

Who has not longed to breakfast in the open on a June morning, with the ozone all about sweet with the fragrance of opening blossoms, the glorious morning sunlight shadowed by a network of leaves newly put forth, and a full orchestra of song birds in surrounding tree tops fairly bursting their throats to do full justice to the occasion? Or to have a quiet hour with a favorite author in the comfort of a back yard cozy corner? These things, or at least some part of them, are possible with ever so little land and means at your disposal. An interest in the undertaking and a little time spent in bringing order out of chaos will in a very short time work wonders. Recently in one of our large cities, a man employed at indoor work during the day and suffering for a little outdoor life, fitted up at trifling expense a roof garden and outdoor sleeping room on the shed roof of his kitchen. For over a year he and his family have slept there winter and summer, practically living there during the warm months, with the most marvelous improvement in health and consequent bright outlook on life. Little children now sleep out of doors all winter long in the changeable climate of New England and to use the expression of a little six-year-old girl one night last winter with the thermometer registering twenty degrees below zero, "It's just lovely out doors at night." Try it during the spring and summer months and you will be loath to give it up when cold weather comes again.

The clean-up movement, and the sleeping in the open movement, are two of the best in the line of human uplift that we have known for a long time. In both of which, the power of example go a long way toward proving the merits of the case. And at this season of the year when the awakening of life throughout all nature is infusing us with the force of accomplishment, let us individually in our home surroundings express in deeds and realize aims, rather than vague intentions, something of our truest and best ideals.

—o—

Shrimp Bisque Soup.

By E. H. J.

Mix one tablespoon of butter with one heaping tablespoon of flour and add to one pint of sweet milk, which has been heated to the boiling point. Stir until perfectly smooth, remove to the back of the range and add the well beaten yolk of one egg, salt, and pepper. Chop three-fourths cup of shrimps and add the last thing. Serve steaming hot.

Corn Souffle.

By E. H. J.

Blend two tablespoonfuls each of butter and flour and heat until it bubbles. Pour on gradually while stirring one cup of milk. When smooth, add one cup of canned corn, season with salt and pepper, and add the yolks of two eggs beaten until light yellow. Then fold in the stiffly beaten whites of two eggs and turn the mixture into a buttered baking dish, bake in a moderate oven until firm, and serve at once with crisp buttered toast.

Rhubarb Conserve.

By E. H. J.

Take four pounds tender pink shoots rhubarb, cutting into inch pieces. Add five pounds granulated sugar, one pound seeded, and cut in half, raisins, the grated rind and juice of two lemons, and two ounces candied ginger cut into small pieces. Mix well together and allow to stand in the preserving kettle for an hour. Then after bringing to the boiling point, place in the fireless cooker or on back of range to simmer for forty minutes. Seal while hot. A few slices of pineapple may be added if desired.

Orange Tart Filling.

By E. H. J.

Cream two ounces of butter with two ounces of powdered sugar and add the juice of three oranges and just a squeeze of lemon juice. Add also the beaten yolks of three eggs, then the stiffly beaten whites. Line tart tins with puff paste fill with above mixture, and bake. When done sprinkle slightly with fine sugar.

Black Chocolate Cake.

Cream one-half cup butter with one and one-half cups sugar and add two well

WM. C. BOWMAN, Manager BOX A CAMBRIDGE, MARYLAND

beaten eggs. Dissolve one level teaspoon soda in one-half cup of sour cream or milk and add to the first mixture, alternating with two cups sifted flour. Have ready two squares of chocolate melted and stir in it one-half cup boiling water, when smooth and well blended add to the cake batter and flavor with one teaspoon vanilla. Bake in two square or round layer tins and frost with a plain white boiled frosting, recipe for which has been given in this column previously.

Steamed Fruit Pudding.

By E. H. J.

Sift two cups of flour with four teaspoons of baking powder, one-half teaspoon salt and one-half cup sugar. Stir into this one cup thin cream, and when thoroughly mixed, add one cup of any of the following fruits: peeled and cubed rhubarb, stoned cherries, blackberries or blueberries. Turn into a buttered covered mold and steam two hours.

Golden Sauce.

Mix one cup sugar, one tablespoon butter, one teaspoon cornstarch, one egg or yolks of two eggs. Pour into this mixture one cup boiling water and stir constantly until it begins to thicken. Remove from stove at once. Flavor and serve.

Feeding.

As we enter the spring and summer months, the question of feeding when chickens are yarded is a serious problem.

The breeder with his breeding stock separated, the party with a fruit or vegetable garden to protect, the householder with a limited yard, these people must have eggs, must keep chickens healthy, must raise little chicks, and graduate them strong and vigorous birds with fine plumage, or chicken raising is not profitable, and yet the birds are confined, conditions unnatural and the important item of feeding has to be on a scientific basis or results will be disappointing.

The essentials to accomplish all these ends, such as clean water, green food, sanitary surroundings, are well known facts to everyone with any knowledge whatever in bird raising, but feeding is the fundamental question.

The object of this article is not a discussion of all the various poultry foods, but to point out just one fundamental food necessity, and by this we mean to emphasize the point that unless you supply that one essential requirement, you neutralize good efforts in all other directions.

Almost from the time the little chick picks the shell, they commence to scratch, and as they grow older you can place any variety, any quantity of grain before them, and yet they will leave their grain and make for the new field or the newly spaded garden, and commence vigorously scratching the earth. Why do they do this? Why do they leave their prepared food? What is it they get out of the earth that makes it so attractive to them? Evidently nature has something the birds need—and unless we get that answer we cannot successfully coop or yard them. A little observation and you have the answer, there is the pupa, the embryo bug, the worm, the insect, that is what they are after, that is what they need and when they get it they commence to lay eggs, that kind of food it is evident is what they actually need to develop the egg.

Of recent years it has been discovered that the product called MILK ALBUMEN has this essential quality of animal protein, the same in its chemical constituents as the bird finds in the matter she gets out of mother earth. The bone meal used in its manufacture undoubtedly forms calcium phosphate and that helps along in other ways, and here then is a food exactly what the chick young or old needs—par excellence, the food for healthy eggs, which means healthy chickens.

EGGS AND BABY CHICKS From Fogg's Single Comb White Leghorns

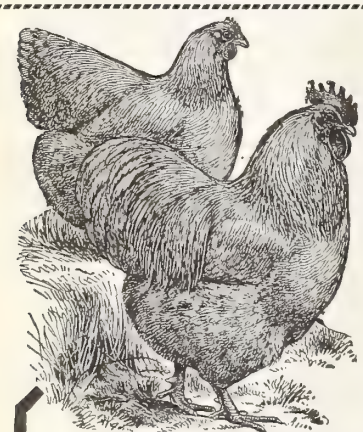
All our breeders this season are old birds, they produce the strongest chicks—THE KIND THAT LIVE. If you want the most for your money, send for mating list now. Safe arrival of chicks and eggs guaranteed.

N. V. FOGG -:- BOX R -:- MT. STERLING, KENTUCKY

"Lissen"

It's Up to You

To decide whether you will continue to feed a lot of hens that will not lay; to hatch from hens that will not produce layers; to mate by guess and reduce the value of the flock each year; to make only the profit, if any, you are making now; or to be able to accurately determine just about what each hen is capable of laying in a year and thus reduce feed bills and still get the same number of eggs.



Would You Hesitate?

If you knew that you could do all of this for the sum of $2.00. Walter Hogan's book,

"THE CALL OF THE HEN"

tells you just how to do this and more. It has been proven by the trap nest.

Send $2.00 to the **Sonoma County National Bank, Petaluma, Cal.,** and get the book; read it, try it out, and if you are not satisfied with the results, send it back and we return the money.

A Rare Opportunity For May Only

THE May sale of Sunswick S. C. Buff Orpington Breeding Pens offers exceptional value in vigorous birds of great laying and breeding capacity. Each bird possesses the color and laying qualities that have made the Sunswick birds of such value in the breeding pens. We offer

Sixty Pens of

PHEASANTS IN SMALL AVIARIES.

THE chicken dooryard business has had a wonderful advance in numbers, and in respectful consideration, acquired by the neater and more ship-shape methods of housing and care given it in the last few years.

The care of pheasants is even more fascinating and can be more profitable than that of chickens. The great beauty of the birds and the absolute cleanliness necessary in their care makes them suitable for front yards, even a pair or two can be kept healthy in a yard 30x12x6 feet with as nice a small shed or ready-made house as you want to buy. The English Ringneck prefer no house. And all kinds I have had prefer to sleep on a roost, out under the clear sky or snow storm, to wake in the morning and shake off a crust of ice or snow.

But they go in for rain, and rain is bad for them. The colors of the males are a constant source of interest and my six pens do not require so much care as the same space given to gladioli, sweet peas and spring bulbs, and not near so much care as chickens.

You feed grain, green food and prepared pheasant food every day. The quantities of feed to be carried about are small. They must not be fed too much or they will moult readily. They must be handled some to be sure they are fed enough, and they must be fed once a day on breeding mash for the best success in hatching.

They must absolutely be kept clean, the houses sprayed and the ground dug over. Two yards is best, one to be growing while the other is in use.

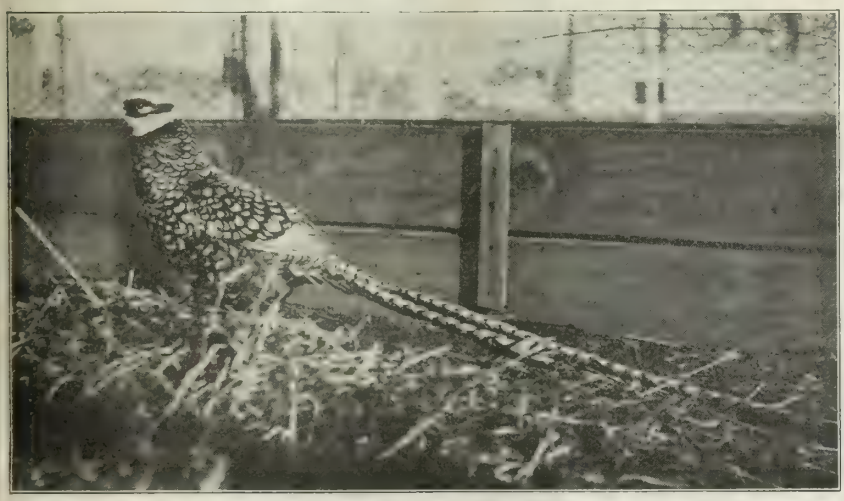
I do not find much difference in the difficulty in raising the different varieties, except the English Ringneck is easiest. There are more people raising English and Golden, so the Amherst brings more money. The Reeves are strong little fellows. The strength and fighting qualities of the Reeves cock makes that variety more difficult to handle and keeps the price up.

My old Reeves cock is quite tame and sings and talks to me. His voice is the only musical one of the bunch that I have. I have raised a number of Reeves and sold them the first year. Some of them sing and none were rough, but they have the name of fighting and trying to spur you.

As for the money in it, I sell from my four varieties $25 to $50 worth of eggs a season, and have sold as many as forty young birds in a season. The first year they bring $5 to $8 each in September. Older birds run to $15 and $20 each. The young birds are a care but if you are not doing too many other things you will find it a pleasure. After feathering they are practically no care.

More Americans are taking up the breeding of pheasants every year and the business is therefore becoming more profitable. You can hardly read an

AMHERST PHEASANT.



Cleveland's Buff Orpingtons Prize winners at the Great Coliseum Shows at Chicago in 1911, 1912 and 1913. Send for mating list. FRANK C. CLEVELAND, Morgan Park, Illinois

HALBACH'S

You need this latest book. Like **Halbach's White Rocks,** it is of superior quality.
EGGS from best matings ever put together at $12.00 per 15. Our winning of every first, second, and five thirds at Chicago this season proves this contention. Our strain holds the world's record. Eggs half price after May 20th, and you have the same chance as I to raise the sensational winners of next season.
Utility Eggs, $10 per 100
A fine assortment of stock to supply your wants. At reduced prices. Explain fully what you want.
H. W. Halbach, R. 1, Waterford, Wis.
Unretouched First Springfield Cockerel

English story or sketch of English life without noting a reference to the pheasantry or the pheasant pens. The large fine American places are acquiring more of the characteristics of the old English places which accounts for part of the increased number of calls for stock. Then for the past three years fashion has demanded quantities of pheasant feathers for millinery; quite a little money can be made in that way if fashion continues to dictate, so that, of course, implies more than one or two pens as the show birds should not be deprived of their beauty.

There are many inquiries about the business of pheasants and of their raising their own young. Those you raise, if you handle them enough and carefully, and are fond of them, you will tame. Those hatched and raised on your place will come back if they escape.

The Amherst cock illustrated here-

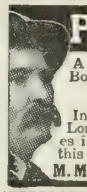
REEVES PHEASANT.

with, is all over me, pecking at my feet and hands whenever I go in the pen. He slipped out one day, and I certainly enjoyed seeing him fly. His colors are shimmering green and blue, some yellow and scarlet in tiny touches. He flew straight up, all those long tail feathers spread as well as the wings. I had raised him, and he had never been out of a pen; but he flew as if he had always done it, way up over the old elm trees and over the cathedral in the next block and away. Although I thought I might lose him, I certainly enjoyed the motion and freedom and the glitter. At night fall when I went out to put up my family, there he was prancing about all over the place, telling the Buff Orpington hens how he admired them. We opened the wire door and it was not much trouble to guide him in.

As to their raising their own young. If you have a pheasant hen that wants to set and will set, save her and protect her. She is a gold mine to you. I have an Amherst hen that has raised me pheasants every year for six years. At first I was scared to let her set. Just as you would be to let your best Orpington hen set. But she just would set. I let her because I could not break her up. I took her egg away and broke up the straw nest, in the corner of her house, and shut the door. She said, "All right." She liked it better out of doors anyway, but she supposed I would fuss if she set out in the weather. Then she built her a nest in the fallen needles from the pile of pine boughs in the corner, placed there for her protection from the cruelty of the cock in the early spring.

She was a little hard to take off the nest from that place. And when I tried she flew at me and scratched long curves across my face. So I finally gave up arguing with her and sprayed her with lice paint every few days, and built a rain shelter over her nesting place and she laid one more egg and raised one big cock nearly twice as big as his father. Since then I have kept count every spring and let her set on the last six of the twenty-four. Last year she hatched and raised five out of six eggs.

I have many more orders every year than I can fill. And this year have orders ahead for what I will raise this summer. When I first began to sell, two very pleasant mannered German gentlemen called and asked me where my birds came from. I told them the firms in Pennsylvania, Colorado, New Jersey and Oregon. Then he said he was the game warden and people kept telling him of my dealing in pheasants. But he said he had and the state of Illinois had no authority over my birds as they had never owned them.



Jennie Milner.

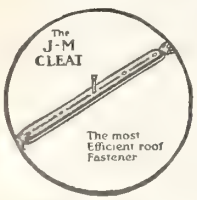
One of Shelly's Red Chicks Just Beginning to Feather

The Second Great J-M Roofing Achievement

One of the principal contributions to roofing progress as developed by the H. W. Johns-Manville Company, is

J-M REGAL ROOFING



"The Roofing with Life"

THIS material was perfected to supply a demand for a rubber type wool felt roofing, lower in price than J-M ASBESTOS, but containing the Johns-Manville standard of quality and service.

J-M REGAL ROOFING does not dry out in the hottest climate and will not freeze or crack in the coldest weather. Does not melt, harden, rot or crumble with time; remains pliable and retains its water-and-fire-resisting properties indefinitely.

Made of the highest grade wool felt, thoroughly saturated and heavily coated on both sides with genuine Trinidad Lake Asphalt, the most durable water-proofing substance known to roofing science.

Every roll supplied with J-M CLEATS, making it easy to lay, insuring absolutely water-tight joints, and lending a very attractive appearance to any roof because it does away with unsightly cement-smeared edges and laps.

J-M ASBESTOS ROOFING and J-M ASBESTOS SHINGLES are the only other roofings, beyond J-M REGAL, you ever need consider. They cover your house and building with stone—defying fire and weather and time forever.

COVERS THE CONTINENT

2383

M. F. Delano, Owner of Owen Farms, Vineyard Haven, Mass.

We plead guilty to having once again fallen to our desires, arriving in Boston we wired Mr. Delano seasonable greetings and received a request to come and we went without further urging. Going to Owen Farms is very much like going to a "Latest Production," there is always something new to see and to learn, and more to interest than on any other poultry plant we know of. With his five standard varieties of White and Buff Orpingtons, White Rocks, White Wyandottes and S. C. Rhode Island Reds, there is variety to satisfy most all. They are leaders and as bred here are without question the finest flock we have seen of these varieties. There is not a weak spot in them and they are in particular recommendable for their size, health or vigor. This climate seems to be particularly adapted to poultry raising for the results of proper growing and health are seen to advantage here.

In a former article we referred to their matings, but at this time and in charge of both Messrs. Delano and Davey we had a better opportunity to see and study these matings and to reason their particular worth.

Heading their matings of White Rocks we found so many noted winners that it was almost impossible to keep correct tab on each. It is a wonderful collection of quality, put together and mated with skill. In color they are absolutely white and carry ideal shape. The strong richred eyes, low set combs, snow white plumage and rich golden-yellow legs must be seen to be appreciated.

The Owen Farm White Wyandottes are stronger than usual to our notion. We have seen this line for years but never in the quality or condition they now are in, the fine shaped backs and general evenness of quality is remarkable.

The White Orpingtons have always been a feature line here and this year is no exception. Grand in size and strength, with most beautiful heads, strong combs and good eyes they show plainly unmistakable worth and value. Such matings are bound to reproduce and we do not hesitate to say that in each is found grand and good value for the prices asked.

Buff Orpingtons should be Mr. Delano's middle name, we have always known him as an admirer and judge of buff color and in his matings of Buff Orpingtons here we noted the special pride he has in them and well he may have. His flock is the largest we have seen and all through are as sound in color as can be. The clean buff tails, clean wing bows and positively sound under-color is the quality seen with size and shape very desirable.

In S. C. Reds we met our real surprise, although we knew this line's winnings well. It is very apparent here that Mr. Delano has retrenched for his matings, a royal collection in color and form. His trade in Reds has doubled and there is cause for it, judging from the matings seen he will again be heard from in this line for they are a superior line.

At this time of special interest were the 3,000 or more young seen here. We have never before seen such a lot of youngsters at this season of the year on any plant, while in numbers they were great, they were still greater in quality. Here were young cockerels crowing and both cockerels and pullets feathered out, in size and bone as well as in promise of quality they were marvels with health and vigor the outstanding feature, a lusty and charming lot to be sure.

In Mr. Delano's mating list we read

THE KIND YOU WANT

Birds that are bred right, that look right, that are right.

Wetmore's White Wyandottes

were ribbon winners at 1913 *Buffalo Show* winning 1st and 3rd Pullet, 2nd Pen and 5th Cockerel in strong competition. White Wyandottes are superior table fowl and wonderful layers. If you want choice birds to improve your strain or foundation stock, I can supply you.

C. S. WETMORE.
ABBOTT ROAD LACKAWANNA, N.Y.

the following: "I know that every one of my egg customers this year will receive more than full value for every dollar sent me and not only raise individual winners but, what is far more important, line-bred youngsters that will reproduce themselves and breed winners." After reading this statement, seeing his matings and these over 3,000 young, as we have, we are ready to say that he does not promise the half that he gives and that every buyer can send him his order with unlimited confidence.

In going through all his pens we noted that their egg laying records are kept in each pen where daily the eggs collected are recorded. These records are very interesting and we dare say that from figures taken all his pens averaged during March and April to date (fifth) between 68 and 69 per cent, which is an extraordinary record for this season of the year.

Mr. Davey is in personal charge of the young and growing stock and to him special credit is due, their condition could not be improved upon and we now believe him a "Wizard" in fact.

Mr. Delano informed us that he will raise upwards of 7,000 young this season as his business has increased to demand this number. Also after May 5th he will reduce the price on eggs for hatching and sell them without reserve at half price. Here is an item that should interest many and is open to all alike.

As usual we had a beautiful day at these farms and a royal old time visit and chicken-chatter. Things never looked better on these farms than now and from Mr. Delano down all hands are up and doing. The pursuit for more and better poultry and for more honor and awards is on, the chances seem to be most excellent.—H. P. Schwab.

—o—

Payne Brothers, Portland, Conn.

For the past two or three years we had promised ourselves a visit to Payne Brothers, breeders and specialists of Rose Comb Reds and for years prominent winners at leading shows including M. S. Garden, New York, Boston, etc., where they have made attractive records with their line, one far-famed for its reproduction qualities.

They have a practical plant in every sense of the word, one built for business and convenience and a place ideal for poultry growing. Portland is in the midst of the garden spot of the State and this section is equally famed for its poultry, fruit, tobacco and garden products. A great share of their 140 acre farm is set to peaches and affords unlimited range for the growing stock who roam at will over the entire farm.

We lately spent a day at their home and regret we hadn't called before, for there we found just the kind of a place that suits us, a plant wholly built on successful breeding that year by year has been enlarged to meet their increased demands, one handled personally by the owners who devote all their time to the poultry and wants of customers.

The matings seen here are a most desirable lot, marvelous in eveness and individual quality, they are grandly made, if we are to judge, with special breeding features outstanding.

Heading their pen one is their First

Conkey's Starting Food *for* Baby Chicks

Is a ready prepared food that supplies the right elements for proper nourishment and vigor. Its use

Makes Chicks Sturdy

Prepares and strengthens them for regular ration. Saves trouble and worry.

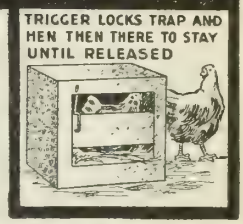
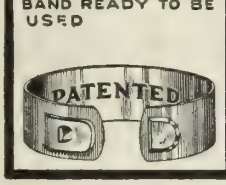
MOE'S NEVER FAIL TRAP NEST



(Patent Pending)

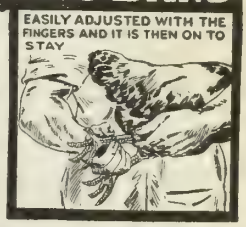


A solution of all trap nest troubles—for, as the name implies, it never fails.

Lice-proof, fully sealed back and sides, but affording plenty of air when the hen is trapped. Can be placed anywhere in the poultry house. The trap is easily removed, so that the nest can be used as an ordinary one. Set up and ready for use when shipped.

No. 33, 12x12x12 inches, complete 75c
No. 34, 12x12x14½ inches, complete $1

MOE'S SELF LOCKING LEG BAND



(Patented)

You simply push it together to lock it and it can only be removed by destroying the band. A sealed band that requires no sealer.

Every band has its own raised or embossed number.

12 Bands, any size 15c

Liberal Discount on Quantities

MOE'S SANITARY POULTRY DRINKING FOUNTAIN

(Patent)

The most popular fountain on the market. Fills from the top.

Dead air space keeps water cool in summer and from freezing in winter. Drinking pan now made square, which does away with spilling when hung up. Can be used for two pens at the same time. Prevents chickens from getting their wattles wet and freezing in the cold weather. Manufactured in three sizes:

No. 1, 1-gallon capacity - $1.25
No. 2, 2-gallon capacity - $1.75
No. 4, 4-gallon capacity - $2.25

Also specially constructed for ducks and pigeons.

These Are a Few of the Good Things in MOE'S LINE.

E. J. STROUD, Owner

Wendler's BARRED ROCKS COLUMBIAN WYANDOTTES BLACK ORPINGTONS

Last month I told you of my remarkable winning record both at Madison Square Garden and at the leading southern shows, but this is not all that my birds are famous for, for they are without a doubt the greatest layers of their respective varieties in the country today. I started breeding Columbian Wyandottes 5 years ago after having perfected the greatest laying strain of Barred Rocks in the South, but did not offer a bird for sale until last year; neither did I offer any eggs, as I wanted to trapnest these and develop an equally heavy laying strain in Columbian Wyandottes, but now I can offer you eggs or stock of either Black Orpingtons, Columbian Wyandottes and Barred Rocks that win and lay. Eggs, $5.00 per setting. Circular free. Your money's worth or your money back.

J. H. WENDLER, LAKELAND, FLA.

prize M. S. Garden, New York, pen cockerel, a male of grandest form, select head and very even rich color, under specially strong, red and sound, wings as good as we expect to see. Pen two, an unplaced New York beauty and to our notion, one of exceptional quality, we liked his shape, color and carriage. Head and comb very fine, wings extra, eyes flaming red, a general make-up that must be quality in its best grade. Pen three, another winner and beauty cock with the best of lines and rich even color. The females in these pens are also a select lot and number among them their winers at New York, New Haven, etc. A complete list of all is given in their mating list.

Other pens were seen here of special worth and we were pleasantly surprised to see these and to know the prices for which their eggs are sold. They have select, even quality, fine heads and are sure to produce fine stock and I would not be surprised if some rare fine birds are bred from these pens as they also contain their best blood lines.

The particular features noted here were the exceptionally fine heads of all the birds and the evenness of color in males and females. The females in neck color are very strong and even, it is same shade as back and body, very sound and rich. Neither males or females are extremes, the color is rich and deep, but brilliant red all the time.

It was a fine flock, sound and dependable and we felt our time well spent in visiting him and will hope to come again. Their mating list tells their story exactly and is free for the asking.—H. P. Schwab.

———o———

"Royal Blue" Barred Plymouth Rocks.

A trip through the East and among the New England breeders would be very incomplete without a visit to Lancaster, Mass., made famous in the poultry world by Mr. A. C. Hawkins and his line of "Royal Blue" Barred Plymouth Rocks.

While we consider Mr. Hawkins still a young man and in the prime of life, he has been breeding so many years that he can well be considered one of our oldest and most valued breeders whose work for standard-bred poultry has been a life-work and a beautifying example of success and poultry possibilities.

We have before us at this time a circular and mating list issued by Mr. Hawkins in 1879, and from that to this day he has been known and recognized as a champion of Barred Rocks and a leader among the breeders of the world. In those days of 35 years ago the Barred Rocks were making their reputation that was to lead them on to the position of highest merit, a place they have ever held, thanks to Mr. Hawkins and a few more like him who recognized their quality and gave to them, by study and breeding, advantage to show at their true worth.

In this list Mr. Hawkins describes four (4) matings and offers eggs for hatching from $2 to $5 per setting. What a change time has made, for now from a flock of four pens we find on his place a great and grand collection of birds that have been prominent winners and have been bred from this line that has a winning record over 35 years long. This record has been brought right down to date by his clean-up-sweep at the last Chicago Show, December, 1913, when he won in a class of 254 Barred Rocks, cock, 1-5; cockerels, 1-3; pullet, 1; pullet-bred cocks, 1-2; pullet-bred cockerels, 1-3; cockerel-mating pen, 1; pullet-mating pen, 2; championship specials for best female and for best male. Best display, best shaped and colored male and female, and several other special prizes completing a record superior to any ever made at this Great Western Show. In December, 1912, Mr. Hawkins made a similar record winning four (4) first prizes and a basket of specials including the $100 silver cup for best display. These records were made at the end of a trip of over 1,000 miles and at the great show of the west in banner classes.

Mr. Hawkins' matings this season are a very select lot and to our notion the best we have seen on his place. For years we have paid him an annual visit and at all times found their matings of quality and value. Here are mated his Chicago and New York winners, birds that have been seen by thousands who knew their worth and promise much for the future. The females used are of the line and quality that have produced his winners for years in cockerel and pullet matings and will again, as now mated, produce desired results.

While we greatly admire the winner's mated hen, we saw two (2) exhibition cockerels heading pens that have never

been shown, they were very late hatched birds and are just finished and at their best. In shape and color they are very superior and this just goes to show that the large breeders can't show all their best birds, but we see them on our trip round and like to make special mention of such birds and facts.

Mr. Hawkins this year has his pullet line equally strong and we noted several matings of extreme quality. The males show exceptional lines and very clean cut barring, with as good heads as we have seen.

A line of this character and quality needs no booming by us. It has been before the public too long and they know its records and value best. It is a line in which the breeders have confidence, now as 35 years ago.

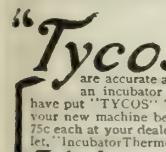
The friends of Mr. Hawkins have nominated him for a member of the Executive Board of the American Poultry Association and we hope for his election. He is one of the oldest members of the association, a life-long poultryman, well posted on its needs and his election would be proper recognition where credit is due.—H. P. Schwab.

———o———

Arthur G. Duston, South Framingham, Mass.

The people who know, well claim that Mr. Arthur G. Duston has done more for the White Wyandottes than any other man. While this is a big statement to make and carries with it much prestige, we still believe it true and hope he may reap all the advantage possible from his chosen work and noble calling. Almost as far back as we can remember, the name of Duston has been linked with White Wyandottes and for about 20 years we have come in contact with this line at hundreds of shows. Mr. Duston, backed by his faith in the variety, has been their champion and unrelenting booster. From their grand natural qualities he has always obtained paying results and on these results he has based all his claims and has more than done one man's share to make the White Wyandotte what it is today, "one of our best and most valuable varieties."

After the above, the reader, of course, will expect me to further boom this line, and to give glowing accounts of his stock and matings. This is also true, and were I to fail in this I would be guilty of most flagrant neglect of duty. I have been at Mr. Duston's yards several times during the past 10 years and am free to say, without fear of contradiction, that he has this year a greater and far better line of birds and matings than ever before, for evenness and general high-grade quality. They are very superior, a rare grand lot. His matings are small, select, and full of greatest promise.



Mr. Duston's royal winnings at the late M. S. Garden, New York Show, is a worthy climax to his years of breeding and exhibiting, and his record there for all these years is the history of the varieties' progress, a consistent winner and a consistent breeder. The matings, as seen here, are a marvelous lot. Males, his greatest winners and their lines, females selected with rare skill, even in shape, correct in style and carriage and of the purest color possible with feature points in their neat combs and flaming red eyes. If we were to follow our notes we would have to describe each pen with same ideal uniformity and quality and with same features, for they are alike and a most charming lot.

Mr. Duston will reduce the price of eggs May 10th and insure to all cus-

tomers a double bargain in this, and will also a little later offer special prices on a share of his breeding stock. In considering this line don't overlook its line-breeding value which should at all times receive first consideration from the buyers. A line that has been bred for generations for practical worth as this one has, carries with it the best of assurance for future success.—H. P. Schwab.

Harold Tompkins, Concord, Mass.

If breeding counts, then Mr. Harold Tompkins should prove to be among the best of Rhode Island Red breeders for his father is the famed Lester Tompkins and his grandfather also was a leading breeder and the founder of this, if not the first, at least one of the first strains of Rhode Island Reds bred.

This was our first visit to his home, and it has done us good, for we expect to go again. Here is an illustration in fact how to succeed with poultry, and this plan and plant has been built from the ground up as progress has been made. It is a practical plant, built for practical results, the buildings are light and airy, also tight and warm with curtain fronts and the stock in quality and general condition of health and vigor all we could ask for.

Mr. Tompkins breeds both Single and Rose Comb Reds and in each has selected matings made with care that should produce results. In the Single Combs there are eight matings all told, most of them headed by winning males. Pen One by first pen cockerel, Boston, Jan., 1913, and Pen Two by first pen cockerel, Boston, Jan., 1914. Here are two matings of special worth, grandly made, the females an extra lot and in these we were shown several old hens that are today rich in color, particularly good under and of the best of type, such stock is worth its weight in gold many times over. The other matings were close up, very even in feather and of beauty type, heads and eyes good.

In Rose Combs the males used are mainly winners and have won their honors at New York, Boston, New Haven, Conn., Portland, Me., etc. In type they have the same general form that is found in the best of the Single Combs, grand long bodies, fine heads and the same rich and sound color. His Pen One Male, winning first at New Haven, has a beautiful head and is a marvel in color surface and under. The third prize, M. S. Garden, New York, pen cockerel heads Pen Two, he is now improved a hundred per cent over his show condition, and the same applies also to his third Boston cockerel. The females fashion up grand and are a treat to see. There are many noted winners back to four years ago among them in his first prize New Haven pullet that also won special for best shape and color.

Mr. Tompkins is sold pretty close on stock, having had a very deservedly large trade and only having a few good cockerels left over, shortly he will also offer a few of his breeders for sale.

From May 10th he will sell eggs at half price and it will be well for the breeders to remember this. We consider them well worth all he now asks for them at any time. His mating list giving all particulars and descriptions of his matings, write him today and always mention American Poultry Journal.—H. P. Schwab.

Joe-Pye, Buff Orpingtons.

On our trip through the East this spring we have had the pleasure of visiting several plants we had never seen before, and have just begun to realize what we have missed. The Joe-Pye Orpington Farm, at South Norwalk, Conn., is one of the finest and best adapted poultry plants we have ever seen. Here are close to 25 acres of land just as made by the Creator, with its hills and valleys, its ridges, bubbling brooks, stones and trees, majestic and beautiful, it is nature at its best. The moss-covered rugged peaks of the gigantic stones from whose creeks and cracks the dwarf evergreens grow, the stately Chestnut and sturdy Hickorys that abound here, all have a part and a purpose, and each a share in the love we find in nature.

Here and there scattered over the hills are the chick coops where the mother hens have their flocks to roam at will and all about are the colony houses for future use. Down the hill are the breeding houses and parks for the breeders and to the right the cockerel house and

conditioning pens, the plant is complete, well built and comfortable.

To Buff Orpington breeders the record of this line is well known, their winnings at both New York Shows, Boston, New Haven, etc., is known by all, it is one of consistent and convincing value that dates from today back several years. Here was again seen the greatest Buff Orpington winner that ever lived, for if memory serves us rightly he has won three (3) first prizes at the M. S. Garden, New York, Show alone. The "Old Champion" seems as good as ever. His color is marvelous for eveness and soundness today, but his own record is nothing to be compared to what birds of his breeding have won, all goes to show that he is great, both in individual quality and as a breeder.

"Joey," a cock winner at the Garden and Palace, N. Y., also at Boston, heads pen One and "Titian" first prize winner at both the Garden and Palace heads pen Two, with "Golden Glow," a Boston and Gorden winner heads pen Three, forming a trio of wonderous beauty. Buff of the soundest and evenest is theirs and in shape and style true Orpington. We were facinated by these matings and their general quality. Females are also of same grade and commendable for form and color. Other matings seen here are close up, the average we thought extra high and the condition and health of the birds of the very best.

Many chicks were seen here from the day-old to some all feathered and they show their quality well in good bone, health and color.

Mr. Harry Stacey Benton, the owner, is an artist and designer and has built his studio up on the hill of uncut stone along original ideas, we hope to show a picture of this. He is a royal fancier, devoted to his poultry and a man it is good to meet at all times. His poultryman, Mr. Wm. Hobbs, has long been considered one of the best posted Orpington men in this country, he originally was with the elder Wm. Cook, in England, and knows them from their first, his work here along with that of Mr. Benton, is evident, both are color experts and they have shown that they know how to mix them. Their mating list is free for the asking.—H. P. Schwab.

Single and Rose Comb R. I. Reds.

The home and yards of the United Breeders (Inc.) at South Braintree, Mass., was found to be one of the largest and liveliest places we have visited to date, all was hustle and all with a definite plan and purpose. We admit they surprised us for we had no real idea of the size of their plant, quality of stock, or of their complete capacity. But, here we found a mammoth plant, ideal in location and arrangement and most evidently run on positive up-to-date business lines, a plant whose influences presages much for poultry interests.

While it is true that we have seen their birds at the shows and particularly at New York and Boston where they were consistent winners, we did not, nor could we comprehend what in reality was back of them, and at their home. This must be seen as I have seen it to fully grasp it all.

Their mating list gives a full and complete record of all their matings and for this we would refer the reader to their list, for anything short of a complete review would not do their matings full justice. We here will just review a few special notes as the birds struck us.

SINGLE COMB REDS.

In their matings were a great line of noted winners, both males and females with a quality of color surprising in even surface and rich under. Shape and size a feature of all males and very fine heads with exceptionally fine red eyes. We handled many of these and particularly noted their even and all-over good quality, and when we consider the lines and blood values had here, we can then best comprehend their worth. Wings and tails have always been an important feature of Reds, and no doubt Mr. Bean and his associates here are fully aware of this, for we failed to see where those sections could be much improved. The females are of equal worth and to our mind seemed grandly mated.

ROSE COMB REDS.

While we are just a little partial to the Single Combs, Rose Combs of the general quality seen here are just as admirable, we must now admit. These matings bore the stamp of superior quality just as well as the Single Comb in shape and color surface and under, wings, tails, etc. We handled male in Pen One and could not find a weak feather in him. He

SILVER WYANDOTTES **WHITE PLYMOUTH ROCKS**

Winners in the leading shows of the middle-west. A few birds of extra quality for sale. My first pen of Silver Wyandottes is headed by Silver King, undefeated champion in strong competition, at five of the best shows ever held in Illinois. Eggs from specialy mated pens, $5.00, $4.00 and $3.00 for fifteen, book your order early, will only furnish a limited number of settings. Mention American Poultry Journal.

Have You Ever Heard of Parkside Poultry Farm?

Parkside Farm is not a rich man's hobby. It is a place where prize winners are bred, hatched, raised and sold to people who cannot raise such birds.

I have won more prizes at Chicago in the last seven years than all my competitors combined.

My Catalogue is Free.

THE PARKSIDE POULTRY FARM

N. P. Easling, Prop. - Box 40 - Pekin, Illinois

is a most admirable specimen and close up we must admit with several others Females averaged very good and combs extra fine, their long bodies and splendid carriage was all we could expect.

Several pens seen here headed by unshown birds took our fancy. They have the same quality in both combs and we feel that beautiful results will be had from these matings. On our round we carried their mating list and feel we owe special mention to this as it is exact, just as the matings stand, every interested breeder should have this, it's free.

We hope to visit their farms again when a more complete mention can be had, for we feel that they deserve all the good that can come to them.—H. P. Schwab.

———o———

Eastern Breeders' Notes.

BY H. P. SCHWAB.

The breeders of the East are having a successful season. Egg orders are larger and better than for three years. Our trip among them has been most pleasing for we have seen quality and number in excess to previous seasons.

Orr's Special Chick Feed is in general use and gives satisfactory results. Breeders seen have all spoken highly of it. Address Wm. Orr & Sons, Box 5, Orr's Mills, N. Y.

Ellis S. Shelly, Williamsburg, Pa., breeder of S. C. Reds, made a grand win at Pittsburg Show, February, 1914. His mating list is just at hand. His season's winnings include also New York Palace Show, Cleveland, Altoona and the Pittsburg Expo Show. Write for his mating list.

Chas. Nixon, Washington, N. J., judge and breeder of White Wyandottes, has a beauty flock of birds. He knows the desired quality and how to get it. He will shortly have a few selected breeders to sell. Write him.

If interested in Single or Rose Comb Reds, write Harold Tompkins, Concord, Mass. He can well supply your wants.

Fairfield Poultry Farm, Fairton, N. J., now make special offer on choice breeding stock in White Rocks. This line is a leader and has won consistently for years at Allentown, Baltimore, Philadelphia, etc.

This is about the season to buy eggs at reduced prices, also to buy breeders. Write those in whom you are particularly interested and improve your stock.

J. W. Parks, Altoona, Pa., breeds Bred-to-Lay Barred Plymouth Rocks of national reputation. They are line bred practical birds that have given best of results for years.

We know of a leading line of Blue Orpingtons for sale; one we can recommend. For further particulars, if interested, address me.

Also a famous line of Barred Plymouth Rocks that can be bought outright.

Fiske's S. C. White Leghorns are leaders. On his new farm and with increased facilities he is able to better supply his trade than ever before. Address Harlo J. Fiske, 891 Westfield St., West Springfield, Mass.

For Baby Chix and Dux address W. R. Curtiss & Co., Ransomville, N. Y. There is no larger or better line or plant in the world.

C. H. Welles, Stratford, Conn., breeder of the "Famous" Fluffy-Ruffles Barred Rocks, the line with winning quality, offers eggs at half price from May 10th on. Better look into this, they are the kind to breed.

———o———

Lebanon, Kan., March 17, 1914.

The H. I. Company, Salem, Va.

Gentlemen: Right willingly do I send my $1 for the trial bottle along with an extra $1 for another. It has converted me that it is all you claim for it, and I have given it the trial. It certainly is a wonderful remedy. As a preventive, its possibilities cannot be realized by one who has never used it.

"Oculum" will put health in your flock and it will always be handy around my American Beauty Barred and Buff Rock yards.

Thank you for your favor and trust. I shall certainly recommend it.

Yours very truly,
W. H. Wright.

Among Our Advertisers.

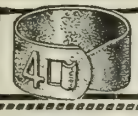
If you are interested in White Plymouth Rocks or White Indian Runner Ducks, it will be to your advantage to write to J. H. Lynch, Route 7, Opdyke, Ill. Mr. Lynch's yards consist of forty acres and he allows his flocks free range, thus insuring strong, healthy birds. He is one of the old-line breeders and raises both general purpose and utility stock. No matter what your wants may be in these two types of fowls, Mr. Lynch can serve you.

A very attractive mating list is being sent out by that well-known Houdan breeder, J. L. Metzler, of Findlay, Ohio. If you will recall it was one of Mr. Metzler's cockerels that captured the blue ribbon at the 1914 Boston show. Write for this mating list, it tells you all about these birds, their record and prices for both stock and eggs.

One more useful article has been added to Moe's already well-known line of high-class poultry appliances. The Otis & Moe Manufacturing Company, Otis Building, Chicago, have purchased the patent, business and good will of the Regal Egg Carrier, formerly owned by B. W. Plane, of Belvidere, Ill. This "safety first" box is adapted to either parcel post or express use, and can be used time after time. At a recent poultry show, one selected at random was filled with eggs, securely tied, then thrown to the ceiling and allowed to drop repeatedly on the floor, tossed from one end of the room to the other, and as a final test a plank was laid over the top of the box and three men stood on the plank, allowing their whole weight to rest thereon; the box was then opened, with the result that not one egg was broken.

A. C. Hawkins, of Lancaster, Mass., well-known and popular breeder of the Royal Blue strain of Barred Rocks, has just issued his 1914 catalog, which tells the history of his fowls for the show season just ended. Mr. Hawkins is one of the old school and has been a breeder for thirty-five years, which is proof that he satisfies his customers. He also breeds White Plymouth Rocks. Write for catalog and prices.

A very attractive catalog, up-to-the-minute in every respect, is being sent out by the Rancocas Farm, of Brown's Mills, N. J. No matter what one of the large shows you attend you are sure to find the S. C. White Leghorns and White Plymouth Rocks of the Rancocas Farm among the exhibits, and also the winners. They have a wonderful farm, and the person who pays this farm a visit finds it time and money well spent. Write to their manager, Mr. L. Chapman, asking for catalog and prices. Address Rancocas Farm, Brown's Mills, N. J.



Authorities pronounce Jacobus—Ja-Co-Bus, Campines—Kam-Peens and Jacobus Campines—O. K. That is the story contained in the catalog just issued by that Campine expert, M. R. Jacobus, of Ridgefield, N. J. It tells its own story fully and complete. Write for a copy.

A machine that can be very profitably used by a poultry raiser is the hand-grinding mill manufactured by Stover Mfg. Co., Freeport, Ill. The chief advantage of a machine of this kind is that it can be adjusted for grinding very small meal or mash for small chicks or corn can be merely cracked for feed for the larger chickens, and an owner can grind up in a few minutes enough feed to last him several days, thereby getting the advantage of always feeding nice fresh grain. This company also manufactures a larger size feed mill and Samson windmills, with which fresh water may be supplied to the home and for stock. They will gladly send printed matter covering anything of their manufacture.

J. Fred N. Kennedy, the Golden and Silver Campine breeder of Birch Cliff, Ont., Canada, writes us: "This season so far has proven exceptionally good, the orders for eggs for hatching have been beyond my expectations. In fact, by the 15th of February this year I had just double the orders booked for eggs for hatching that I had last year in the same time. My last season's egg orders amounted to over $6,000. The demand for stock has been far greater than the supply; during the past 12 months I have shipped over 1,000 Campines, and since the first of March I have had to return money and turn down orders for stock amounting to over $1,500. I have already a number of orders booked for stock for shipment after June 1, both young and old." Mr. Kennedy has just issued a beautiful catalog that is bound to prove valuable if you are interested in Campines.

Ship Day Old Chicks in This Safe Box

We ship thousands of baby chicks each season from *Tywacana Farms* to all parts of the country in the strong but light and compact

Wright Box
THE RIGHT BOX

The most satisfactory box for shipping chicks. It has adjustable ventilating regulator which meets varying weather conditions more satisfactorily than any other device. Chicks do not trample, smother or get chilled. Made of double, reinforced corrugated cardboard—it is

Strong—Simple—Safe—Sanitary

The New Wright Egg Box is the strongest and lightest package for shipping hatching eggs or fresh table eggs. Easy to pack—each egg has absolute protection—cannot shake or jar. Both chick and egg boxes are shipped to you flat and are easily set up and packed for shipment to your customers.

Write today for Free Booklet describing The Wright Boxes for shipping chicks and eggs.

TYWACANA FARMS POULTRY CO.
A. E. Wright, Supt. Box 53 Farmingdale, Long Island, N.Y.

Keep Chicks Growing Fast

The International Sanitary Hover gives them reliable *overhead warmth and constant fresh air.* Circular—no corners for crowding or smothering. Made of metal; cannot burn, break or warp. Heavily insulated, and warmest at the curtain. To set it up you simply light the lamp and set it down—no holes to cut or platforms to build. Can be used anywhere, even in a dry-goods box. Weighs 30 pounds, easily moved. Capacity 100 chicks—nearly 200 square inches more hovering space than ordinary hovers. Used on world's largest poultry farm and by successful poultrymen in every state. **Price $8.50, complete.**

6 in 1 Exerciser Feeder

Saves grain and labor and keeps your fowls healthy by making them work for their food. The 6 in 1 Exerciser Feeder is a large metal hopper on strong iron legs. Large central compartment holds grain that the birds scatter in the litter, by working the agitator. Six other compartments are for dry mash, grit, beef scrap, shell, etc. Makes all other feeding devices unnecessary. It is clean and prevents wasting feed. Fill it in the morning and fowls feed themselves. Increases poultry profits wherever it is used. **Price: 40-quart, $4.75; 20-quart, $3.75.**

when, what materials to use and how and with which machines to apply them. Spray bulletins and calendars are issued by National and State Agricultural Departments giving complete details for each section. Which sprayer depends on the size and kind of job. Bateman Mfg. Co. offer in the "Iron Age" line of sprayers a real choice to suit your exact needs. More than this, their's is a unit line, one that can be built up in certain parts, to larger uses, for future growth. The line includes hand, bucket, knapsack, 20 and 50-gallon horizontal barrel sprayers, 50-gallon vertical barrel sprayers, 50, 100, 150 and 250-gallon power sprayers and traction sprayers for row crops—about 70 styles and combinations to suit any possible use that you may have for a sprayer. "Iron Age" quality speaks for itself, an old established line of implements for farm, garden and orchard. They have an interesting "Spray" booklet and a spray calendar that are free for the asking. Address Bateman Mfg. Co., Grenloch, N. J.

Back to the soil. We hear the slogan on every hand nowadays. In some quarters the idea has assumed the proportions of a hobby, if indeed it cannot be called a passion. As the knowledge of the physical being and its needs has increased; as life in the modern cities has grown more and more complex; and the struggle for livelihood becomes keener and ever more serious, the thought of the pure air of the country, the vision of verdure-clad hills and alluring vales, the freedom offered from nerve-racking hustle and bustle in the crowded marts of trade, all make a strong appeal which gathers ever-increasing force as the thought takes hold of a man. And one of the chief factors in the present-day attractiveness of farm life is the comparative ease of tilling the soil to what the old-time laborious methods used to entail. This ease of cultivation has been brought about by the Planet Jr. implements to such an extent that farming and gardening have come to be among the most profitable as well as the most healthful of occupations. A 72 page illustrated catalog telling you all about Planet Jr. implements will be mailed free on request. Address S. L. Allen Co., Box 1107T, Philadelphia.

R. F. Neubert, says this is certainly a year of "back to chickens and eggs," thousands of new amateur poultry raisers will make a start this year. The continued high price of poultry and eggs is a great incentive aside from the pleasure. Mr. Neubert, for twenty years the big chicken raiser and incubator manufacturer of the Northwest, issues a big poultry and incubator book. He sends it free for 4 cents to cover postage. Address R. F. Neubert, Box 768, Mankato, Minn.

If you are looking for bargains write to G. A. Walker, Polo, Ill. As the owner of Sunnyside Poultry Yards, on account of being overstocked he is making exceptionally low prices on eggs and stock. He breeds the Exhibition Barred Plymouth Rocks.

Eggs from hens scoring 92 to 94½ points is what E. J. King is advertising. He breeds R. C. Rhode Island Reds and in the show season just ended he made a remarkable record. He is making special prices on baby chicks and eggs, so no doubt it will pay you to write him. Address Edward J. King, Box 171, Pine Grove, W. Va.

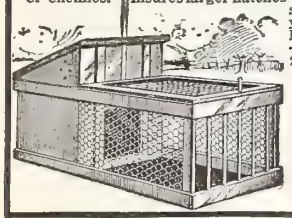
Woodcrest Partridge Wyandottes.

Just beyond the city limits of Worcester, Mass., in a section of rare and stately beauty, is the country home of Mr. Charles H. Wood, specialist and breeder of "Woodcrest" Partridge Wyandottes, a line that has received the favorable consideration of breeders for many years and has won the highest honors possible to win, making at the late Madison Square Garden, New York, Show, a record that will ever stand to the credit of this man and his strain of Partridge Wyandottes.

Mr. Wood is an impressive man, a sincere worker, a man with a purpose, and it is most pleasing to note that the results of his labors have made him an enviable reputation as a leader in his line and variety. There is reason found in his work and method in his ideas, and his whole success, to our mind, is due to the fact that he studied and mastered conditions and tried hard to succeed. This kind of breeders, who will concentrate mind and thought on their work and use plenty of "gray matter," are not only bound to succeed but are in reality the backbone and foundation of the poultry industry.

We had seen Mr. Wood's winners at New York and Boston shows and knew his records well, but still and withal he surprised us in the general quality and largeness of his flock. Their shape and evenness of color was better, more uniform and far superior than we thought it possible to attain. This sounds pretty big even to us, but let me here add we have to talk big when the facts are at hand to bear out fully all statements that we could make.

At the late Madison Square Garden, New York, Show Mr. Wood won on cocks 1-2-4, hen 2, cockerel 1-3-4, pullets 1-4-5, pens 1-3, best display and all specials, scoring a total of 54 points, against 17 points for his nearest competitor. We believe this record stands unapproached at this show. True it is that it was made in the grandest class we have seen.



MATINGS FOR 1914.

To describe these matings is a review of the line. His pens as seen absolutely conform to his mating list. Here are his winners and great quality birds mated with apparent skill that promises well for the future of this line. There are no "fillers" used, and if there is a hole in them we failed to see it. They are made uniformly with greatest possible care taken of type and the rich and even color in male and

females alike. There are no light necks, no straight backs or pinched tails used, while the heads, combs and eyes are simply marvelous. Pen 1 is headed by first New York cockerel, a bird today improved over his New York Show condition, beauty in form and color and simply immense in striping of hackle and saddle, grandly mated to females of breeding quality.

Next was his first New York cock, a noble specimen and unbeatable as seen here, ideal in shape and rich in every quality; mates a select lot. Heading pen 1 was his first New York pen cock, surely one of the rarest ever bred. He also won color special at New York. Comb ideal, a strong, hardy fellow; mates a wonderfully even lot that handle grandly. In pen 4 was the second New York cock, bred from a famous winning hen at New York, Boston and Chicago. This cock is most brilliant in color and superior in markings, his tail a marvel and in form of body most excellent. This mating is indeed one of admirable quality, sure to produce highest puality.

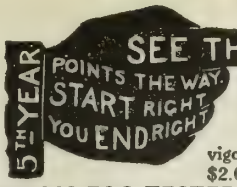
Pen 5 is headed by first Boston cock, a noble fellow, full of life, dark and rich in color, grand shape, and females all typical, nicely penciled and even. This line is particularly free from shafting. None whatever is seen in these matings.

In the next pen (6) was the third New York cockerel, one which always looked good to us, an admirable bird, sure to make a wonder cock. His breast and back shape, finish and carriage of tail are ideal. Mates compare favorable, and of best blood lines.

In pen 7 was the fourth New York cockerel, an all around grand bird in shape and color. Next was a beauty cock of extra size and even quality. In pen 9 was the third pen cockerel (New York), one of the best in form and rarest in color. Pen 10 is headed by an unshown beauty cockerel, that seems to carry every quality and is superior in many ways. We liked his type and carriage and his color, markings, etc. He is a true representative of this beauty variety.

This concludes Mr. Wood's matings, and to my mind they assure future results for this line. They are made with an evenness and evident care that bids well. Type all through is the most commendable quality, as it should be. Combs as good as we have seen on any flock of Wyandottes. Eyes 99 per cent perfect, and in general color and markings as well as in carriage, health and vigor they are way above the ideal we had set as being reasonable to expect.

Also, in going from pen to pen, we noted the nests and found that this line of Partridge Wyandottes are layers pre-eminent. They lay a fine colored egg of good size and plenty of them.



This plant is finely located with beautiful surroundings and above all is practical, pens nicely arranged, yards large, affording plenty of grass and shade and all is clean and in ship-shape. It is a plant that has the personal interest of the owner back of it, and one in which he has great personal pride. While we most heartily commend this line, we also wish to commend Mr. Wood for what he has done for standard bred poultry. His work and his success are an example, in fact, of the real possibilities of the poultry industry and he well deserves the success attained.—H. P. Schwab.

Lester Tompkins, Concord, Mass.

Our day at Concord, Mass., was one of special interest, for we not only seen two large and valuable flocks of R. I. Reds but also seen points of interest closely related with the early history of "our country." The two miles from Concord to the home of Lester Tompkins is over a historic road, from which can be seen the "Bridge" where the first battle of the Revolution was fought, also the monuments marking the lines of contending forces. Historians give glowing accounts of the deeds of those days that are well worth reading, and we of today can best raise our hats and be thankful for their patriotism and the results of their endeavors. With the sun a-shining and with evidence of another close springtime it was a day we shall long remember, one most pleasant to us.

We had been here before and knew what to expect, also have seen this line at the prominent shows the past season and pretty well know their quality, but Mr. Tompkins had some surprises in store for us. Sure, we admired his matings of his famous winners. They are all what he claims for them, but here also we seen mated pens of unshown beauties that to us were very attractive. Cockerels that had come along and were late to finish were seen here in wondrous quality, and females of same type and quality of color.

It is simply useless for us to describe the matings as seen here, as minute detail of sameness would fail to interest. Still in

"DRYING UP!!"

That is the cry **everywhere.** "My chicks are drying up in the shell, will your Tester help me?" **Most assuredly.** Don't incubate eggs **unless they first pass the Magic Egg Tester.** "XX" eggs hold moisture best, hatch best, and make the chicks with backbone, health and vigor. **Impossible to hatch one egg this Tester rejects.** $2.00 each. 1 year's trial. Guaranteed. Cost refunded if dissatisfied.

MATING LIST FOR 1914 ON APPLICATION

NEPONSET Paroid Roofing

There's a NEPONSET Roofing for Every Building

GET Neponset Roofings—the "slowly made" kind. Then you are sure to get roofings that are slow to wear out. Then you'll never get a poor roofing when you need a good one.

Neponset Roofings are long on the roof—because long "in the making." This means more than you think. It means this: Maximum protection to your home—your stock—and your pocket-book. Protection against leaks—repairs—and that greatest danger of all—fire. Remarkable "year-in-and-year-out" protection—in cold or hot climates—at a minimum cost—this is the "blanket protection" slowly made Neponset Roofings *invariably* give.

There's a slowly made Neponset Roofing for every purpose. Neponset Paroid is the great roofing for fine farm buildings.

Other Neponset Roofings are—Neponset Shingles for residences; Neponset Proslate, the colored roofing.

Sold by dealers everywhere. Write for name of nearest dealer.

Also makers of Neponset Wall Board, used in place of laths and plaster, and Neponset Waterproof Building Paper

each pen was noted quality and merit. The males a royal lot, shape excellent and color brilliant. Here we seen males of both combs that carried their sheen and brilliancy way down into their body and fluff sections, a feature we had never noted before. Soundness of color, rich and rare surface and under is the famous feature of this line. Of all the males handled (50 or more) we failed to find one that was poor under or of weak or wavy color on surface.

The females were close up in every quality, shape was excellent and strength and quality of color sound. They are all we could expect from this or any line.

His winners of the past two and three years are here in as good condition as ever. We have described these birds before in our show reports, but as mated and seen here we fear we failed to do them full justice. It is very evident Mr. Tompkins has made his matings with unusual care. They show this in a general as well as in an individual way, and we would bank on them for results.

Business is booming here and a great load of eggs for hatching was shipped the day of our visit. Fertility reports are grand here and we would expect them to be so, for his colony houses with large runs for each mating assures these results.

Mr. Tompkins has issued a very original catalogue this season, telling of his line as bred for 45 years, which he sends free to all interested. Write him for one and always be sure to mention the American Poultry Journal.—H. P. Schwab.

C. H. Welles, Stratford, Conn.

The visitor can always find something of special interest at the home of a Barred Rock breeder, and particularly when at the place of a "Famous" line such as Mr. Welles' "Fluffy-Ruffles," that has always been a leader and whose influence has been felt and proven beneficial the world over. The winning records of this line is in a great part the record of the Madison Square Garden, New York, Show for twenty or more years past, and we also well know that this line value has been a most prominent factor in the female winner at leading shows for years past.

Mr. Welles now devotes all his time to the breeding of his Barred Rocks, and we lately spent a most pleasant and interesting day looking over his matings and noting with care their make-up, which is, we feel assured, far superior to any he has ever had.

The males used are models in form, well built and well carried with the best of style. In color they have a contrast all their own and distinctive. The white is pronounced, clean and absolutely pure. The barring is regular, very narrow and even from tip to tip. But above all, we value their blood-lines, which is of the richest and of superior value, having produced national winners almost without number.

The females used are of the best of type, color and barring, and we feel doubly assured that results will be had, for history proves this line one of special reproduction value we can recommend.

Mr. Welles also breeds two pens mated for cockerels, all lining back to his first prize Madison Square Garden, New York, cock of three years ago. They are very select matings.

After May 10 Mr. Welles will sell eggs at reduced prices. His mating list is sent free for the asking. Write him for this and further particulars regarding egg prices. —H. P. Schwab.

The Henderson Farm.

If now, or at any time in the future you have an idea of raising Barred Plymouth Rocks, sit right down and write for the beautiful illustrated catalog that tells you all about the Henderson Strain of fowls. This catalog is in a class by itself and has one feature that other breeders overlooked, an insert 45 inches long and 7 inches wide showing a panorama view of this wonderful farm and buildings.

The Henderson Farm is located at Bridgeton, Mo., only eight miles from St. Louis. It contains fifty acres, all of which is devoted exclusively to the culture of Barred Plymouth Rocks.

Mr. Henderson has a wonderful list of ribbons dating from 1899 to date, besides the great list of winnings made by his customers. For this season he has thirty pens mated and no matter if it is stock, eggs or baby chicks he can supply you. No order is too large and none too small.

Write for catalog. Address W. W. Henderson, Bridgeton, St. Louis County, Mo. —Chick.

20th Century Hatchery.

Jos. A. Blum & Co. are the gentlemen who put the town of Chatfield, Ohio, on the map.

For fifteen years these people have been handling baby chicks, their plant known as the 20th Century Hatchery, being one of the largest in the country. They started in on a small scale, enlarging each year until today their capacity is 40,000 eggs per hatch. Last year they shipped 134,875 chicks and from all accounts they will go far above that mark this year.

Their plant is entirely modern in every respect, even to having their buildings concrete. Their incubators (of their own

make) together with a mammoth Candee are the latest in artificial hatchery.

All chicks from their plant are the same price, purchasers receiving the benefit of size and quality. They specialize on four varieties, S. C. White and Brown Leghorns, Barred Plymouth Rocks and Rhode Island Reds.

The writer has been through this plant several times and can highly endorse both the firm and stock.—H. H. Coburn.

America's Champion Blue Ribbon Strain.

Beyond a shadow of a doubt, the neatest, most attractive and up-to-date catalog that I have had the pleasure of reading is issued by Erwin F. Dean, breeder of the famous American Champion Blue Ribbon Strain of Golden and Silver Campines.

From the front cover to the back page it draws and holds your attention, so you must admit it is just a little different from all others. Printed on high class paper with a large number of illustrations, it tells the history of these wonderful birds, gives you list of matings, prices of stock and eggs. It also tells you how to care for eggs in hatching and when, what and how to feed chicks. A very remarkable fact about Mr. Dean's mating pens is that every one is headed by a ribbon winner from this season's shows at Boston, Madison Square Garden and Baltimore.

The well known Campine breeder, Bernard Hime, is manager for Mr. Dean, which insures you the best birds that can be bred. In dealing with Mr. Dean you will find a gentleman who will never be satisfied unless you are. Just write him for catalog and prices. Address Erwin F. Dean, Box C, Williamsport, Pa.—Chick.

Something Out of the Ordinary.

Stone Cottage, Mucklenuck, Pretoria, South Africa.

Feb. 5, 1914.

Mr. Chas. V. Keeler, Winamac, Ind., U. S. A.

My Dear Mr. Keeler:

Once more I am writing you for White Wyandottes. I want you to quote prices delivered at Durban, Natal, South Africa, for one first class cockerel also for two first class pullets. I want once more to thank you for your fair dealings over the original pen I purchased three years ago. I surely started with the right stuff for I have won at all our big shows all over South Africa ever since I commenced exhibiting your strain. I have never yet been beaten on cocks at any show. The past two years I have won the South African Championship at the Central South African show where we had over 2,000 entries and I won best bird in show. Also 1, 2, 3 cocks. 1, 3, 4th cockerel. There is hardly a White Wyandotte breeder in this country who has not bought stock from me. Three of the government poultry farms have also bought stock from me. I am just off for England so please write to me to

Mrs. H. R. M. Bourne,

Proof of the Pudding.

There is no better proof of goods of merit than satisfied customers. The following letter tells its own story and is only one of the many that this firm receives daily.

Hot Springs, Ark.
3-22-14.

Simplex Supply House, Chicago, Ill.

Dear Sirs: Regarding the Simplex Kant Klog Feeder which I purchased from you on December 31, 1913, will say that I think you have solved the problem of feeding and without a doubt it is the greatest and most practical feeder on the market. It has reduced my feed bill fully 50 per cent during the past three months and I find that my birds are healthier and the egg yield greater by a larger percentage than ever before. I take great pleasure in recommending it to everyone and would not be without it for ten times its cost. As an example I have one installed in a pen which consists of twelve S. C. White Orpingtons. I fill it on Monday and don't have to worry about my birds until the following Monday, when I refill it. Anything I may be able to do for you I will be only too glad to do so.

Wishing you the greatest success in the world, I am,

Yours truly,
W. M. Metzer,
Box 113,
Hot Springs, Ark.

It goes to prove that the Simplicity Automatic Kant Klog Poultry Feeder does the work. These feeders are sold on a positive guarantee of money refunded if not satisfactory. Write for their catalog. Address Simplex Supply House, Pontiax Bldg., Chicago, Ill.

Egg and Baby Chick Carriers.

Only eleven years old and now doing a business amounting to almost a million dollars a year, is some record. This record tells its own story, it means good goods and satisfied customers. The Andrews Paper Box Co., of Chattanooga, Tenn., is the firm who has made this wonderful record. They make a specialty of eggs and baby chick carriers, sold under a guarantee of money refunded if not satisfactory. They also make wooden colony chick houses, portable laying houses, colony breeding houses and shipping coops.

Besides these poultry supplies they make paper boxes for any and all articles, so no matter what type of box you may want write for their catalog. Address Andrews Paper Box Co., Chattanooga, Tenn.

Great Leghorn Record.

One of the largest winners at the past season's shows held in the Mid-West was that popular S. C. White Leghorn breeder, H. A. Muntz, of Elgin, Ill.

Starting in at the Springfield State Fair, he went right on up the line, winning blue ribbons at every show with the exception of the Chicago Coliseum, where he captured two seconds, one fourth and a fifth, being the only exhibitor that won in every class that he entered. At the Elgin Show, besides his many ribbons, he won seven cups and two specials.

His mating list and prices are sure to interest you if your thoughts run toward this breed of fowl. Write to him today.

Listen to the Judge.

In this issue you will find some special bargains which are being offered by that well known old timer, Judge Nixon.

For the past twenty-one years Mr. Nixon has been breeding, mating and judging White Wyandottes, so it goes without saying that he knows fowls, and especially White Wyandottes. Oh, yes, the Judge exhibits, at least you would think so if you were to visit his farm and see the room covered with ribbons and cups, a large number of the ribbons being blue in color.

Look up his ad in this issue, then write him; he will treat you right. Address Charles Nixon, Box 202, Washington, N. J.

A Big and Vital Question to Every Poultry Raiser.

Early in March of this year Thos. J. Lane, of Dresher, Pa., wrote to an acquaintance of his, Dr. T. J. Clemens, editor of the Poultry Department of the Philadelphia Daily Inquirer and asked him "what and how" to feed his "chicks and adult fowls to best advantage." To this letter from his friend Dr. Clemens replied as follows:

To hatch your chicks right is an important matter, and to brood them correctly is also very essential, but then the big and vital question is, "What and how to feed them for best results?"

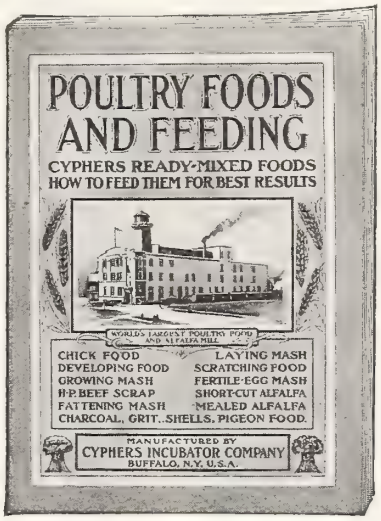
The Philadelphia Inquirer,
Editorial Rooms.
Philadelphia, March 18, 1914.

Thos. J. Lane, Esq., Dresher, Pa.

Dear Tom: I am sending you, under separate cover, one of the best poultry books ever published by Cyphers Incubator Company and I trust that you will read every word of it from cover to cover. It will be a revelation to you, but you may rest assured that every method described and recommended is a practical one, as practiced and endorsed by a practical and successful firm.

Yours very truly,
Thomas J. Clemens, M. D.

You, reader, can obtain a free copy of this same book, mailed postpaid to your address, without obligation, by simply writing a letter or postal card to the nearest place of business of Cyphers Company (see addresses herewith) and asking for it. The booklet, "Poultry Foods and Feeding," consists of 52 pages, 7x10 inches in size, is fully illustrated and contains the following timely information:



Correct Feeding of the Chicks.—Tells in detail what, when and how to feed each day for the first seven; then every week up to the fifteenth week, including full benefits of the labor-saving, money-making, health-giving, deep-litter method.

Squab Broilers.—What they are, how produced, how fed, etc. Breeders of Leghorns will want to read and profit by this chapter; tells how to "finish for market."

Broilers and Fryers.—Explains what they are, names best breeds and tells why; gives detailed directions how to produce fancy, top price broilers and fryers by use of buttermilk or sour milk diet; can be produced on any farm; fully explains special fattening methods.

Roasting Chickens.—What they are; the best breeds; simple and easy way to "special fatten" and thus secure premium prices; gives best rations and explains why it pays to pen-fatten old fowls, etc.

Soft Roasters.—Finest table chickens sent to market; what they are and how produced; both "pen-fattening" and "crate-fattening" methods explained with a-b-c directions how to proceed; what and how to feed on ordinary farm or any practical poultry plant.

This 52-Page Booklet Is Free to Our Readers, Postpaid, for the Asking.

Capons.—What they are and how produced: best breeds and crosses; correct methods of handling, feeding, etc., to get quickest, heaviest weights and obtain highest prices.

Layers.—How to feed and handle the chicks from hatching date to laying period, to produce large, vigorous bodies, healthy egg organs and maximum yield; what and how much to feed the chicks, the rapidly-maturing pullets and the layers.

Breeders.—How to raise, feed and care for the chicks that are to be relied on as breeders, in order to obtain largest practicable yield of strongly fertile eggs during the breeding season. What and how to feed for fertile eggs.

Deep-Litter Feeding.—States principles and gives results of tests by this economical method, which produces excellent chicks and costs less in food, time and labor; mortality also less.

Dry-Feeding vs. Wet Mashes.—Explains the advantages of both, and tells why wet mashes are necessary to best results in cases where special purposes are to be achieved.

Send today for your free copy of "Poultry Foods and Feeding," mentioning this paper when you write. Address home offices of Cyphers Incubator Company, Buffalo, N. Y., or their branch store and warehouse nearest you, as follows: New York City, N. Y., 41 Barclay St.; Boston, Mass., 12-14 Canal St.; Chicago, Ill., 329-331 Plymouth Court; Kansas City, Mo., 317 319 Southwest Boulevard; Oakland, Cal., 2127-2131 Broadway; London, England, 121-123 Finsbury Pavement.

—o—

Mrs. William H. Moore, Chadds Ford, Pa., recently acquired the entire flock of Black Cochin Bantams bred by J. A. Conner, of Coatesville, Pa. This flock of National winners has been added to her grand strain of Congo Black Cochin Bantams, and she now possesses one of the best flocks of Black Cochin Bantams in the country.

Gensemer Brothers, Creston, Ohio, have some wonderful Silver and Golden Campine matings that will produce winners for next show season. Campines hatched in June and July mature for the show room and May-hatched ones are ready for the fairs and southern shows in September. Write them for special egg offer. —H. H. Coburn.

The New Prairie State Stove Brooder.

A new idea in stove brooders is now offered by the Prairie State Incubator Co., Homer City, Pa. Like all of the "Prairie State" products, the new brooder stove has special qualities and features that should recommend it to every poutry raiser who broods in quantities of 500 to 1,000 chicks.

Ventilation is the great point to consider in selecting a brooder, as chicks will die rapidly if kept in close confinement in a brooder that is not properly ventilated. In the Prairie State Stove Brooder chicks have plenty of warmth, plenty of space to exercise, and choice of temperature. The weak ones may remain near the heat, or in any zone that they choose.

The Prairie State Stove Brooder is designed to burn hard coal and is regulated automatically. The consumption of fuel has been carefully computed, and the cost of operating for 24 hours in ordinary weather is figured at about 7 cents, making it a very economical brooder for so large a number of chicks.

The stove is without legs, thus preventing chicks from running under or being crowded under. A canopy top of galvanized steel holds the heat, and at the same time is open enough to furnish plenty of ventilation. It is hinged in the center. One-half of the circle can be raised to allow operator ready access to all parts and to supply fuel. For poultrymen who raise large numbers of chicks the Prairie State Stove Brooder seems to cover every requirement as to low cost of fuel, correct ventilation, ease of handling and durability.

The Prairie State Incubator Co. also have a new portable hover which is a very interesting device—useful for those who brood in flocks of 50 or over.

Space does not allow a description of this meritorious article, but full information can be had by addressing the manufacturers.

———o———

Hilldorfer Black Minorca Farms, Saxonburg, Butler Co., Pa.

The name of Hilldorfer has been prominently linked with Black Minorcas ever since we can remember. That this is one of the leading lines goes without saying, for during all these years it has been a winner at our greatest shows. This last season at Hagerstown's great show they won cock 1-2, cockerel 1-2, hen 1-4, pullet 1-5, best display and all specials.

At the Pittsburg Exposition Show, January, 1914, the Black Minorca Club meeting show, with 274 birds competing, they won cock 1-2, cockerel 1-3, hen 3, pullets 1-3-8, pens 3-4-7, cup for best display, etc. These winnings, like others made during the past at Madison Square Garden, New York, Baltimore, Chicago, etc., are of the same character and commend this line for consideration.

For the benefit of our readers and all those interested in Black Minorcas, we are glad to announce that after May 1 Mr. Hilldorfer will sell his eggs at half price for the balance of the season. This makes his best from his famous winners within the reach of all, an opportunity the breeders should grasp.

Write for his mating list and order your eggs now; they are sold with his usual guarantee.—H. P. Schwab.

———o———

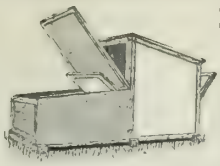
Early hatched White Wyandotte chicks weighing one and one-half pounds at this time and looking like "comers" for early fall fairs can be obtained now from George H. Rudy, Route 15, Mattoon, Ill. Mr. Rudy reports that the fertility of his eggs is running better than ever, and that he is perfectly delighted with the results from his matings which have produced strong and vigorous chicks with little mortality. See his ad under table of contents.

———

Owing to the great number of inquiries received for Speckled Sussex, Red Sussex Farms, Marysville, Mich., have just imported some of England's best specimens. The same noted strain, the Champion Strain, as their Red Sussex. They will receive orders for stock for fall delivery, but will not sell any Speckled Sussex eggs this season.

———

Sherman Bowden, White Wyandotte specialist of Mansfield, O., is booking orders for eggs from his choice matings for delivery after May 1 at half price.



This is a rare opportunity to get started in his Imperials for very little money.

Mr. Bowden reports that his first and second prize pullets at the big Cleveland, O., show were hatched in June. Write him for large illustrated mating list free.

ANNOUNCEMENT

I wish to notify all my old customers and friends that I have severed my connection with Flanders White Leghorn Farm, Orchard Lake, Mich. I have retained 10 Grand Pens of Show Birds, which comprise all the winners at the late Chicago Coliseum Show, 1913. I shall do business hereafter from my own farm at Knoxville, Ill. Nothing for sale before Oct. 1st.

ROBT. D. PARMENTER, KNOXVILLE, ILL.

THE SIMPLICITY KANT-KLOG POULTRY FEEDER

6-quart size, especially adapted for low coops $1.50

This puts an end to all your poultry troubles—no more staying at home on Sundays—go when you like, stay as long as you like. You can rest assured that your chickens will be fed correctly and regularly. It feeds anything from whole corn to millet seed, saves feed, time and labor; it is sparrow and rat proof, never fails to work; it can't clog. **Your Money Back If Not Satisfactory.** Write for catalog today.

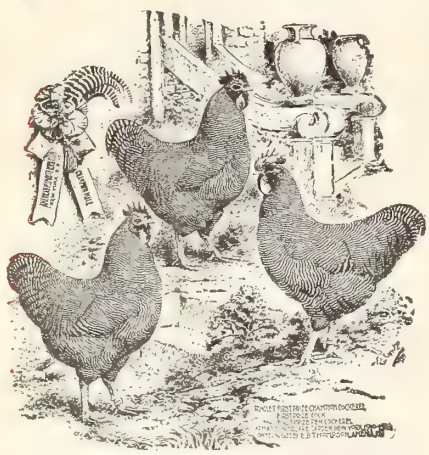
E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.



The Imperial prize of the show, Sweepstakes Special for Champion Male.

Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

Feed Water Grit

Here are three little labor-saving sanitary devices you cannot afford to be without. They are made of heavy galvanized iron, extra deep, and will fit any Mason Jar

The Latest Feed-Saving Device for Little Chicks

Your money back if not satisfied

Capacity three-fourths Bushel
Diameter 30 inches

Insures well-fed chicks—the kind that thrive and grow to size. Prevents the old birds from eating the chick feed—a saving in feed bills. Shelters the chicks from excessive heat or sudden rain. Feed cannot be thrown out by the little chicks and spoiled, yet they can always get clean, dry feed.

Made of extra heavy galvanized iron throughout, beautiful corrugated top, extra re-enforced bottom—an article easily worth $10.00. Diameter 30 in., height 21 in., weight 21 lbs. net.

Special Introductory Prices

$4.00 Each, or three feeders packed in one crate at **three for $10.00**

SIMPLEX SUPPLY HOUSE - PONTIAX BLDG., CHICAGO

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich.

F. E. HARRISON'S ARISTOCRATIC ROYAL RED S. C. R. I. REDS

Are the acknowledged champions by virtue of a show record unequalled by any competitor.

In the last two Chicago Coliseum Shows, 1912-13 and 1913-14 (note the dates), Royal Reds won nine out of a possible twelve firsts , competing with seventy-four competitors, none of which won more than one first.

In addition to this, in these two great shows, Royal Reds won five seconds, four thirds, three fourths, and two fifths, and three times as many color specials, shape specials and championships as all other competitors combined, and best display at both shows. Think this over.

Catalogue free for the asking.

Late hatched chicks are always best in color.

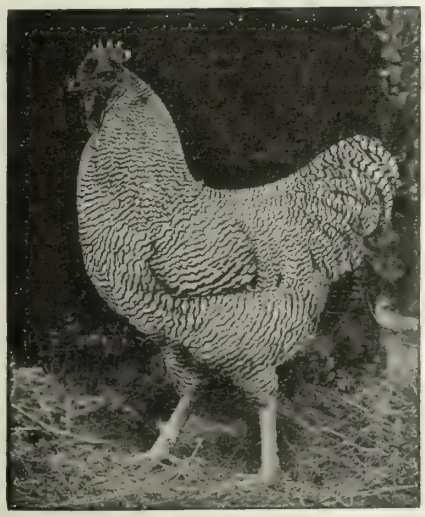
The best possible value and service is also extended you in **Stock** which I now offer at ONE-HALF regular price. Secure a doubly profitable purchase now by anticipating your future requirements. That's what every successful business man does. Superb Stars ready for immediate or later delivery. Birds with a future.

C. S. BYERS (Orpington Specialist and Judge 15 Years) **HAZELRIGG, INDIANA**

Above All—The Henderson Strain

AMERICA'S FOREMOST

Barred Plym. Rocks for Exhibition and Utility



Madison Square Garden, New York, Chicago and St. Louis Winners

This grand strain is large framed, with wonderful type, has long, deep bodies, broad backs, well spread tails carried low, and that snappy distinct barring to the skin, that wins in the best of competition.

My first prize cockerel and grand champion male at Chicago 1912 in a class of 54 of the best in the world proves that my strain carries the maximum of quality in Barred Rocks today. His type and barring created a sensation among Barred Rock breeders of the world. A number of his wonderful sons will head my 1914 breeding pens.

When you start to make up your breeding pens this year and find that deficiency which you desire to overcome, **remember that I have the strongest lines of breeding Barred Rocks in America**, and can furnish males and females with the quality desired to balance the pen and improve the progeny.

My **Barred Rocks** have won consistently at all the large national shows for the last 20 years in all competition as a result of being line bred and pedigreed. Compare my winnings with those of any other breeder and form your own conclusion as to who has the best producing strain.

First Prize Pullet Bred Cockerel, Coliseum, St. Louis, 1913

For the season of 1914 I will mate 50 breeding pens in both my **Cockerel** and **Pullet lines**, from which I will furnish eggs for hatching at prices quoted in my mating list and catalog which describes each individual specimen that I will have in breeding. These pens will contain my Madison Square Garden, N. Y., Chicago and St. Louis winners and their descendants. The inherent characteristic quality as bred in the **Henderson Strain** both in the Cockerel and Pullet lines, and demonstrated by their public record in the best show rooms in America, enables me to mate for the season of 1914 the strongest breeding pens of **Barred Rocks** in the world.

Write for my new Catalog-Mating-List which minutely describes these pens and **the largest exclusive Barred Rock farm in the world.**

On Farms Where Efficiency Rules

— where progressiveness marks every feature of equipment and method—you will find the buildings covered, once and forever, with

J-M ASBESTOS ROOFING

"The Roll of Honor"

A roofing of everlasting, pliable stone, made of pure Asbestos and Trinidad Lake Asphalt. A perfect protection for otherwise perishable buildings. Requires no paint or other protection. No maintenance cost. Keeps buildings cool in summer, warm in winter. Affords wonderful fire protection. Proof against every weather condition. Easy to lay with J-M Cleats, which come with each roll. White and attractive — no cement-smeared, unsightly joints or laps.

J-M REGAL ROOFING was perfected to supply a demand for a rubber type, wool felt roofing, lower in price than J-M ASBESTOS, but containing the H. W. Johns-Manville Co.'s standard of quality and service. Also applied with J-M CLEATS.

J-M ASBESTOS SHINGLES meet the demand for a decorative fire-proof residence roofing that never needs paint.

Your dealer keeps J-M Roofings, or you may order direct. Write nearest branch for Book No. 3826

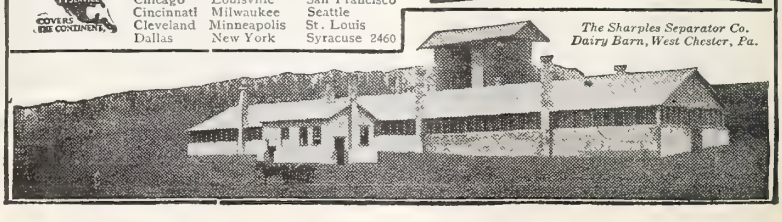
JOHNS-MANVILLE SERVICE COVERS THE CONTINENT

The Sharples Separator Co.
West Chester, Pa. U.S.A.

April 8, 1914



H. W. Johns-Manville Company,
New York City, New York.

Gentlemen:

We are using your Asbestos Roofing on our new dairy barn, having decided to adopt it because of the satisfaction it has given us on other buildings. Our barn and equipment are thoroughly modern in every way, and our dairy is run on a profit-producing basis, so that the feature of ultimate saving which can be made with your permanent roofing was an attractive one. It also gives an appearance of neatness, which is very valuable on a dairy farm like ours. We are glad to recommend it

Yours very truly,
THE SHARPLES SEPARATOR CO.
P. M. Sharples
Vice-President.

THE BEST BLOOD LINES

Tecktonius-Reed Strains

R. C. S. C. Buff Leghorns S. C. Rhode Island Reds

The fame of **"Tecktonius" Buffs—America's Champion exhibition and laying fowl**—is world wide. Big exhibition prizes, everywhere, at their mercy—not once, but for **7 consecutive years**. Their laying record, as well, is as long and brilliant, with 249½ average in 1912 Nat'l Laying Contest—one bird 281 high. "Tecktonius" Buffs build "winning" reputations, and make "big money" for poultrymen. Put your trust in them and be a "winner" as a poultryman.

Reed's Champion Single Comb Rhode Island Reds are the outcome of **seven years efforts** of B. C. Reed—one of the most scientific and successful breeders this country has ever known. He is an expert at mating and has by his untiring efforts perfected a strain of Reds that are second to none.

If you want to get into the class of **"winners"** do not overlook this grand strain of Reds.

See special offers below.

Some Unrivaled Tecktonius Strain Bargains

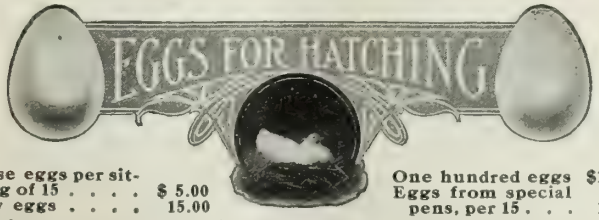
S. C. Matings--Pens 1 to 6 inclusive, one 15-egg setting, $10; two, $18, three, $25.
Random Selection--If selected from one pen, in which price rules, $5 per setting, extra. Pens 7 to 10 inclusive, one setting, $5; two, $9; four, $15. Pens 11 to 14, inclusive, $2 per setting; $10 for one hundred
R. C. Matings--Pens 15 and 16, one setting, $15; two, $25.
S. C. Utility Stock--Hens, $2; Cockerels, $3 and $5; trios and pens, $10 and $15.
Exhibition Stock--Hens, $5; Cockerels, $15 and $25; trios and pens, $25 to $50.

No Chicks of Either Variety For Sale. Mating List Free.

Special Introductory Offer—Reed's Strain S. C. R. I. Reds

We have mated 6 pens of these Royal Bred birds--the cream of 565--comprising 2 Cocks, 4 Cockerels, 20 Hens and 40 Pullets. Everyone is a marvel of breeding, with exquisite, rich even Red Color, and with absolutely no contrast between hackle, back and sickle feathers. The tail and wing markings are as near perfection, as scientific breeding can make them. Both male and female types come up to standard requirements, and well over standard in breeding weight. From all pens above described, we will sell eggs as follows: One 15 egg setting, $5; two, $9; four, $15; per one hundred, $25.

No Stock For Sale Until Fall. No Chicks For Sale.



Special—A 50 % reduction from above prices on all egg settings from my S. and R. C. Buff Leghorn and S. C. R. I. Red pens; and a 25% reduction from my established list price on all S. and R. C. Buff Leghorn stock; effective June 1, 1914, and good until August 31, 1914.

Double Regulation

Study the upper picture.

The Candee coalburning heater furnishes a general supply of hot water flowing through the mains under the machine.

The automatic regulator on the heater controls this supply.

A radiator in each egg chamber furnishes heat to the eggs in that compartment.

An automatic regulator on each compartment at the arrow points, controls the temperature in its own compartment.

Both the circulations and regulations are distinct—both are simple and reliable.

In a hot day the compartments take only a little heat. On a cool night they take as much more as they need, automatically and exactly.

The Candee heating method is unlike any other. It reduces labor and safeguards the eggs.

A Steady Even Heat

Experienced operators marvel at the steady, even heat. They have tried the Candee with a cellar temperature of below zero, and with the cellar above 90 degrees. Regardless, the compartment temperatures were automatically held at just the degree wanted.

It Comes all Built

Each Candee section is shipped completed—ready to set on its legs. No expert help is required. A machine is ready for the eggs in a few hours. Extra sections are added just as easily. Take the panel off the rear section and add the extra sections on.

Start with a 1200-egg Size

This is made up of two sections and it can be added to later. You can install it in a day. Anyone can operate it in a few minutes daily. It requires attention only when you have to turn and cool the eggs.

The 1200 is a popular size. Hundreds of them were shipped last season to all parts of the country, Canada and abroad.

Every Candee size is a success.

Who Uses Candees

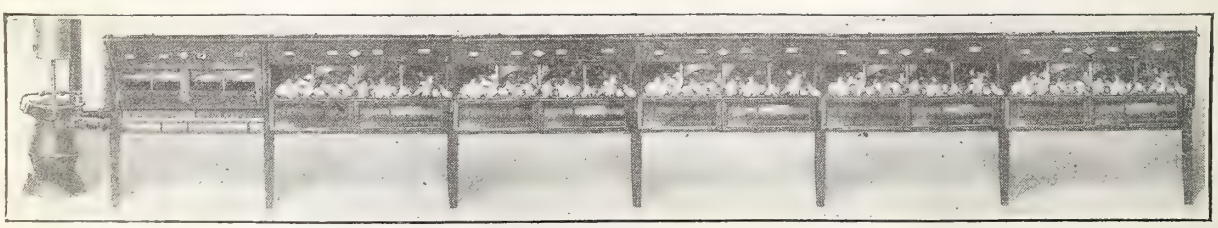
The leading colleges and Experiment stations, such as Mountain Grove, Mo.; Ames, Iowa; Purdue, North Dakota; Ohio State University; Cornell; Guelph, Alberta, and the Canadian government.

Many of the most prominent country estates of noted manufacturers, bankers, railroad presidents, etc.

The Long Island, Massachusetts and Pennsylvania duck raisers.

Leading poultry plants, farms, custom hatcheries, day-old chick specialists, etc.

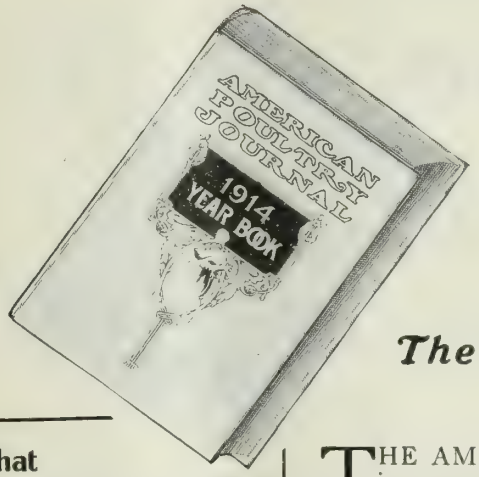
In fact, there are more Candees in use than all other mammoths combined.



Write Today for Catalogue

Our 108-page free catalogue is illustrated with views of hundreds of farms at home and abroad, where Candee incubators and brooding systems are in use.

We supply incubator cellar and brooding house building plans and give complete service.



Write today.

AMERICAN POULTRY

Year Book for 1914

The Authentic Review of the Poultry Industry

THE AMERICAN POULTRY YEAR BOOK for 1914 is now ready, being bigger and better than ever. It is the authentic review of the poultry industry for 1913, and contains information on the following subjects: Frozen Poultry vs. Fresh Killed, by Helen T. Woods; Poultry Feeding and Foods, by Prof. M. E. Jaffa; Complete Reports of All Egg Laying Contests, The Single Testing System, by Prof. D. F. Laurie; Poultryman's Encyclopedia; Judge and Show Directory; Barred Plymouth Rocks, by H. P. Schwab; Poultry Journal Directory; Anatomy of the Fowl, by Dr. S. A. McWilliams, Poultryman's Calendar, by Clarence Ward; Remarkable Growth of Poultry Industry, by J. F. Schureman; White Diarrhoea and Fowl Cholera, by B. F. Kaupp, M. D.; Complete Reports of Leading Shows; Directory of Experimental Stations; Organization of Boys' and Girls' Poultry Clubs, by Harry M. Lamon; Efficiency in Poultry Husbandry, by Dr. Prince T. Woods, M. D.; Laying House for 100 Hens, by Prof J. C. Graham; Blue Orpingtons, by Max de Bathe; Fattening Poultry, by Alfred E. Lee. These are only a few of many good things in store for our readers in this

Greatest of All Poultry Books

It is fully illustrated by L. A. Stahmer, and also contains many colored pictures of the various breeds of fowls. This is not a one-man book, but has articles on poultry by many of the leading poultry authorities in the country. The 1913 Year Book proved of great value to many thousands of readers, and our supply gave out long before the demand did, therefore many interested persons got left. The 1914 Year Book contains over 400 pages of good practical common sense information which will be relished by professional as well as amateur poultrymen. Remember, now is the time to order your copy and avoid the rush.

Attractive Paper Binding - .50
Your Money Back If You Are Not Satisfied

American Poultry Journal Publishing Company
542 So. Dearborn St. Chicago, Ill.

THE book contains the latest feeding formulas by the world's greatest experts—how to feed the baby chicks, the youngsters, the breeding stock, the winter layers for large egg production in fact the important subject of feeding poultry is thoroughly covered in all its branches, with five pages of tables showing the composition and digestibility of all poultry foods which shows how to properly compound any kind of ration for any purpose.

What Experts Think of It

Dear Sir: * * In my opinion the article on anatomy of the fowl will pay anybody for the purchase of the book. Yours truly, A. F. Rolf, Professor in charge of Poultry, Oklahoma Agricultural Exp. Station, Stillwater, Okla.

Gentlemen: Your 1914 Year Book has just been received. This, I find, is a valuable book, much more so, in my opinion, than the one which you issued last year. I find it crammed full of valuable information from cover to cover. Yours very truly, T. E. Quisenberry, Director Missouri State Poultry Exp. Station, Mountain Grove, Mo.

EVERYBODY PRAISES BOOK

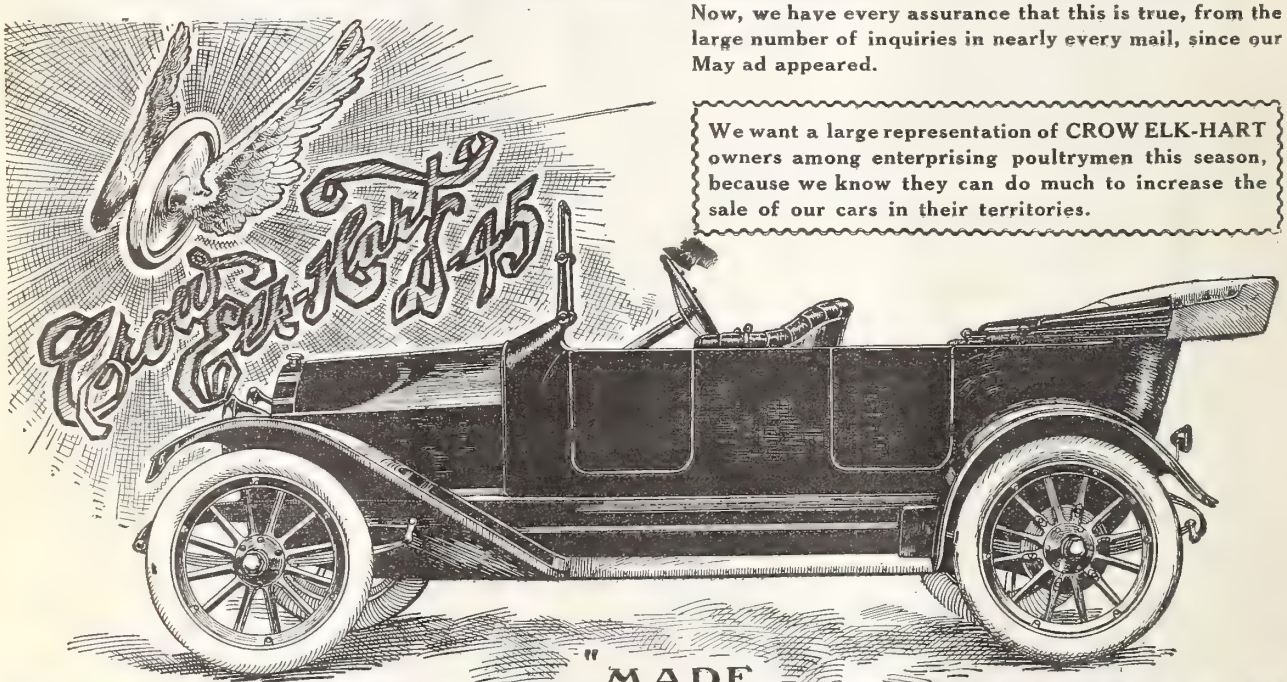
Dear Sir: Year Book for 1914 just to hand and contents carefully noted. It is filled to repletion with valuable information no owner of poultry can afford to be without. Sincerely yours, B. F. Kaupp, M.D., Spartanburg, S. C.

Gentlemen: Received your very valuable 1914 Year Book today, and consider it worth its weight in gold. The many valuable hints, and helpful reminders it contains are deeply appreciated by the writer, and should be in the hands of all who may be interested in poultry culture, without exception. The beginner should not be without a copy at least, as the instructions it contains merits a great deal more than the name implies. I feel grateful for having had the opportunity to secure this book at such a nominal cost. Wishing you every success, I beg to remain, Yours very truly, Frank J. Britz, Prop. Quality Poultry Farm, Gregson, Mont.

Printing and Binding

The Year Book is printed on high grade enameled book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1914.

No book of this kind has ever been presented to the American public before. Think of it over 400 pages, colored illustrations, the best articles that money could buy, on the most helpful subjects, and complete show reports for 1913-14.



Prices—$1.00 for the de luxe cloth bound edition and 50c for the paper bound edition, express prepaid.

COCK-A DOODLE-DOO I'LL BUY A CROW ELK-HART TOO!

Such seems to be the sentiment among a large class of thrifty poultrymen since our May ad appeared in the A. P. J. We had faith that there was a big field of opportunity to sell a high-class motor car to men engaged in the poultry industry. Now, we have every assurance that this is true, from the large number of inquiries in nearly every mail, since our May ad appeared.

We want a large representation of CROW ELK-HART owners among enterprising poultrymen this season, because we know they can do much to increase the sale of our cars in their territories.

SIMPLE SILENT

"MADE TO MAKE GOOD"

SPEEDY SAFE

MR. CITY POULTRYMAN! MR. POULTRY FANCIER!

MR. RURAL POULTRYMAN! MR. BUSINESS MAN!—

CROW ELK-HART PRICES will interest you! Do not delay writing us, that your order may be placed promptly, if you would experience the great satisfaction, pleasure and comfort to be derived from the ownership of a CROW ELK-HART.

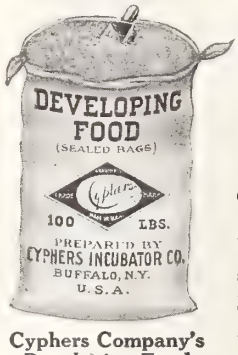
Keep Your Chicks Growing

EACH YEAR many chick raisers make a fine start in the spring with good hatches and successful brooding, but when the hot summer months come along the chicks lose their thrift and stop growing. ***Don't let this happen to your flock.*** The summer months are the natural growing season for chicks and it is easy to keep them coming right along if they have half a chance. Free range during the day, good ventilation at night, abundance of shade, plenty of succulent green food and CYPHERS PURE-GRAIN, BALANCED-RATION FOODS will keep your chicks growing right through the hottest months without a check—without a backset, and they will come to the fall with large frames, sturdy bodies and vigorous constitutions—just the kind of birds that you want for layers and breeders. We ask you to give CYPHERS FOODS a trial to show what they can do in promoting ***steady, rapid growth, early maturity and vigorous constitutions.***

Use Cyphers Chick Food until the chicks are five or six weeks old, then change to Developing Food. After they are a month old keep Growing Mash before them all the time in hoppers, or moisten it and feed once or twice a day, and you can almost ***see them grow.*** Don't fail to provide High-Protein Meat Scrap, too. Chicks seldom get all the animal food they need on the range and they ***must have plenty*** of this nutritious, muscle-growing food if they are to make the best and most profitable growth.

This Book Would be Cheap at $5.00 Per Copy, Judged by Actual, Detailed Value of Contents. Tells How To Produce Broilers, Fryers, Roasting Chickens and Capons; Also Exactly How to Feed the Layers and Breeders. 52 Pages, 7⅛ x 10 Inches, One FREE COPY on Request to Any Address.



ASSORTED ORDERS: To give our foods and our FEEDING METHODS a fair trial, we ask you to order a 5-BAG OR A 10-BAG LOT, made up of an ASSORTMENT of Cyphers Chick Food, Cyphers Developing Food, Cyphers Growing Mash and Cyphers High-Protein Meat Scrap. Make up EITHER ASSORTMENT (five bags or ten bags) according to the age and number of your chicks. On a 5-bag order we will save you part of the freight by quoting a LOWER PRICE than the single-bag price, while on ten bags (assorted) the reduction in prices will offset the freight to points STILL FARTHER from our Buffalo, Boston, New York City, Chicago, Kansas City and Oakland, Cal. warehouses.

WRITE TODAY TO OUR PLACE OF BUSINESS NEAREST YOU FOR LOWEST CURRENT PRICES AND FULL INFORMATION.

Cyphers Company's Chick Food

This 100-Lb. Bag will feed 100 Newly-Hatched Chicks Four Weeks, or 50 Chicks Six to Seven Weeks. Price $2.50 F. O. B. Buffalo, Boston, New York City, Chicago and Kansas City. Price F. O. B. Oakland, $3.00.

Cyphers Company's Developing Food

This is a Medium-Granulated, Five-Grain Balanced Ration that we Advise our Customers to Feed to Growing Chicks Between the Ages of Six to Twelve Weeks, Before They are Given Whole Grain. Write for prices.

RECENT REPORTS FROM CUSTOMERS

Please read the sample reports given below and see what Cyphers Balanced-Ration Poultry Foods have done for others. ***They will do as much for YOU***

"Dressed at 3 Pounds, 9 Ounces"

New Castle, Pa., February 5, 1914.

Cyphers Incubator Co., Buffalo, N. Y.—

Last spring I tried your deep-litter plan of feeding chicks, ***testing it on a small scale.*** When my chicks were about a week old, I placed them in a run 3½x6 feet and used about five inches of litter and Cyphers Chick Food. ***I never lost a chick.*** One of the cockerels, at sixteen weeks of age, dressed at three pounds, nine ounces. I raised other chicks at the same time by hand feeding, ***but was convinced*** by this trial of deep-litter feeding ***that it gives the best results.*** I believe that ***it more persons who raise a few chicks each year*** would compare your Chick Food and your Mash Foods with other brands that are on the market today, ***the comparison*** would be enough to discourage the use of any other brand of poultry foods than the kinds made by your company.

W. O. WINK.

"Strong for Your Feeding Methods"

Hudson Falls, N. Y., March 9, 1914.

Cyphers Incubator Co., Buffalo, N. Y.—

I have used your Sealed-bag Brand of Chick Food during the past three years and I ***cannot say enough in praise of it.*** Have had such excellent luck since I began using it that if some one were to make me a present of a bag of any other chick food on the market, ***I would refuse it,*** provided I was obliged to feed it to my chicks, after accepting it. That is how "strong" I am for Cyphers Chick Food—and I am equally strong for your feeding methods. I have followed your plan of deep-litter feeding and had Barred Plymouth Rock pullets begin laying at five months and three days old, ***and they layed steadily all winter.*** The free poultry literature your company furnishes to its customers ***is a great help.***

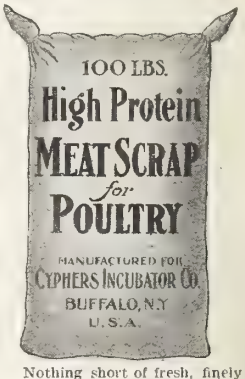
GEORGE E. RUSSELL.

"Used Exclusively for Several Years—Buying in Half-Ton Lots"

Letts, Iowa, July 16, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I have been using Cyphers Balanced-Ration Poultry Foods exclusively for several years, buying them in 500-pound and half-ton lots. Have tried out practically all the advertised poultry foods on the market, but ***by repeated experiment and long experience*** I find the Cyphers brand to be the ***most reliable*** and that they ***produce the most satisfactory growth and development*** in growing stock, not to speak of keeping the older fowls in splendid health and ***keeping up the egg-yield*** to the highest possible point. Cyphers foods are particularly free from weed seeds and foreign substances of all kinds, and I have never found any signs of moldy grains in them. I could not say as much for many of the other poultry foods I have tried out during the past few years. I use your Chick Food, Developing Food, Fattening Mash, High-Protein Meat Scrap and Short-Cut Alfalfa, and find the right combination of these foods invariably produces the desired results.

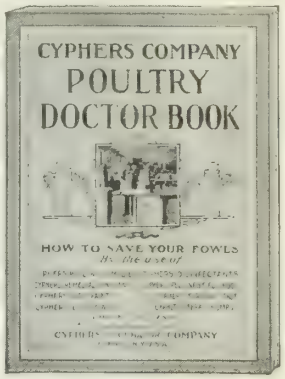


E. R. McCORMICK.

Six Places of Business: Bear in mind, reader, that the Cyphers Company conducts six places of business (and has done so for ten to sixteen years), thus bringing its goods NEAR TO YOU and thereby saving you money on freight charges and "valuable time" in making prompt delivery. WRITE TODAY to our place of business nearest you for our "Special 1914 Consumers' Prices" in ASSORTED 5-BAG, 10-BAG and TON LOTS of Cyphers Sealed-bag-brand, Balanced-ration, All-sweet-grain Poultry Foods—every bag, every ounce GUARANTEED TO POSSESS 100 PER CENT. FEEDING VALUE.

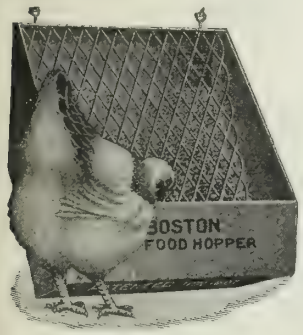
Be sure to send for our Big, Free 244-page Complete Catalogue, entitled "Poultry Keeping in All Branches."

The only SURE WAY to feed a correctly balanced ration is in "mash" or pulverized form—then the chicks simply have to eat it in the EXACT PROPORTIONS you give it to them; they CAN NOT possibly pick out just what they want, a grain of this, or a kernel of that. Cyphers Growing Mash, as the name indicates, is a balanced ration in mash form to be hopper-fed to chicks one month to six months old. One bag will PROVE OUR CLAIMS.



Nothing short of fresh, finely cut green bone and ground meat CAN EQUAL Cyphers High-Protein Meat Scrap for the RAPID GROWTH and development of chicks that are one to four months old. Young chicks will grow remarkably fast when fed a small ration each day of this "meat food." It takes the place of the thousands of bugs, worms and insects that your chicks would find for themselves if they were out on free range. Try 50 or 100 lbs. and TEST OUR CLAIMS.

Prevent Losses and Save Time



GROWING CHICKS at this season have most natural conditions in their favor and yet a little neglect or carelessness may result in heavy losses. The successful poultryman must always be on the watch for diseases, lice and other sources of loss. It is important, also, to use ***time-saving methods*** and to have ***up-to-date equipment*** so that the work can be done right. Thousands of experienced poultrymen have found the CYPHERS METHOD ***the loss-preventing, time-saving way*** and we ask you, Reader, to test our claims—to enjoy the advantages that Cyphers Equipment will give you.

THE NEW CYPHERS COMPANY POULTRY DOCTOR BOOK will help you to PREVENT LOSSES among your chicks, and adult fowls as well. This 32-page book is the latest addition to the popular series of hand books on poultry keeping, published by Cyphers Incubator Company, and it gives in plain, simple words, all the information needed to enable you to prevent disease—to keep your fowls in the best of health. If sickness breaks out you will find it easy, with this book in hand, to learn the nature of the disease and the proper remedy to apply in order to prevent losses and avoid the spread of infection. ***The Cyphers Company Poultry Doctor Book*** tells which diseases are infectious and liable to cause epidemics, and which are due simply to errors in feeding or care. A first-edition copy of this valuable book will be sent FREE, postpaid, to every reader of this journal who applies for it promptly. ***Don't wait for your fowls to get sick*** before sending for this book. Get your copy now and prevent sickness, and be ready for disease if it should break out.

Large Dry Feed Size. Holds ½ bushel. Price, $1.00. Meat Scrap Hopper is half this size, and holds one peck. Price, 80 cents.

SAVE TIME BY USING BOSTON DRY FOOD HOPPERS

Many poultrymen are breaking away from the old, time-consuming, food-wasting, disease-producing method of wet-mash feeding and using dry mash instead, keeping it before their fowls, young and old, in Boston Dry Food Hoppers. These hoppers are ***waste-proof, rat-proof, sanitary, indestructible and non-clogging.*** They have all the good points you have been looking for in hoppers and none of the defects you have found in other makes. Boston Hoppers are made in different sizes, for both adult fowls and young chicks, and you cannot afford to keep fowls without them. Send for our ***Special Dry-Feeding Circular*** and learn all about the dry feeding method and the merits of these great food hoppers.

LABORATORY PRODUCTS AND SUPPLIES

OUR ENTIRE LINE of laboratory products and supplies is designed to prevent loss in the poultry yard and to save time and money, and thousands of practical poultrymen have found them unequalled in quality. They are moderate in cost, convenient to use and thoroughly practical.

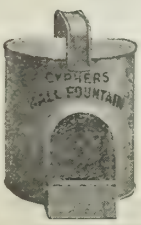
Cyphers Lice Paint is a liquid lice destroyer unexcelled for killing all insect parasites of poultry. When used about the roosts, walls and droppings boards in the poultry house, mites will never give serious trouble.

Cyphers Lice Powder For killing lice on fowls there is nothing better than Cyphers Lice Powder. Dust it well into the feathers of hens and chicks and the body lice ***will be killed***—not driven elsewhere for the time being. Cyphers Lice Powder is easy to apply, sure in effect and can be used in nests of sitting hens without injuring young chicks.

Napcreol Disinfectant For disinfecting poultry houses, brooders, incubators and wherever a good disinfectant is required. Napcreol is a highly concentrated preparation. It is ready for immediate use by simply mixing with the required amount of water, and one gallon makes 50 gallons of germ-killing, disease-preventing disinfectant.

Save-Al Guaranteed Egg Preservative Now is the time to put eggs down for use in winter when eggs are always expensive and good ones hard to get at any price. Save-Al is guaranteed to keep strictly fresh eggs in usable condition for 6 to 10 months. One gallon makes sufficient solution to keep 65 dozen eggs, at a cost of a little over one cent a dozen, and less when several gallons are purchased at one time.

Metalware Supplies—Do Not Overlook Them Our ***water fountains, wall fountains, grit*** and ***shell boxes, poultry punches, legbands, spray pumps,*** etc., are of superior quality. These supplies will save your time and your money and are indispensable on all up-to-date poultry plants. If you have not received a copy of our 1914 244-page complete Catalogue and Poultryman's Guide send for it at once and learn about Cyphers Company's supplies—***learn just how well we are prepared to serve you.***



Sold by Agents If you live at points that are FAR DISTANT from our six places of business, please drop us a postal card or write us a letter and ask for the NAME AND ADDRESS of the nearest Cyphers Company selling agent who carries our Poultry Foods and Supplies in stock and therefore is prepared to fill your orders promptly. There are many such selling agents in the United States and Canada and they will be glad to SUPPLY YOUR WANTS—to give your valued orders PROMPT AND CAREFUL ATTENTION.

"PITTSBURGH PERFECT" CHICKEN AND RABBIT FENCE

Indispensable to all poultry raisers, large or small. The closest-meshed fence of its kind in the world. The horizontal wires in the bottom portion of this fence are only 1 inch apart, the upright wires being 4 or 6 inches apart, as desired. Affords *perfect protection* against all prowling, destructive animals, while the smallest chickens can't squeeze through.

The strongest, most durable chicken fence, because it is made of heavy gauge Open Hearth wire, heavily and thoroughly galvanized. Wires at every contact point are WELDED BY ELECTRICITY, making a *one-piece fabric*, easiest to string. No top and bottom boards required. Fewer posts needed.

SOLD BY DEALERS EVERYWHERE

RAISE EVERY CHICK on "HEN-E-TA-HEN-O-LA" The *Phosphatic*-System!

The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.
The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.
Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*
HENETA BONE CO., Dept. 1, Newark, N. J.

THE KIND YOU WANT

Birds that are bred right, that look right, that are right.

BIRDS OF QUALITY

PERKINS' STRAIN

Partridge Plymouth Rocks

are perfect both in type and color. As egg producers they can not be excelled.

That is why eggs from my matings are bound to produce fowls that will meet all requirements.

Look up the show records and you will find that the "Perkins Strain" have always been among the winners.

If you want "birds of quality," that kind that have the beautiful triple lacing, besides being egg producers, send for a setting of Perkins Strain eggs.

Mating List with color plate of fowls, describing our pens, is free. Write for it.

SPECIAL.

At a great cost, we have issued a special De Luxe catalogue, beautifully illustrated, with full information about Partridge Rocks. The price is 25c and it is well worth the money.

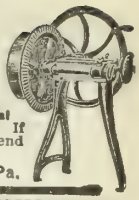
"Lissen"

It's Up to You

To decide whether you will continue to feed a lot of hens that will not lay; to hatch from hens that will not produce layers; to mate by guess and reduce the value of the flock each year; to make only the profit, if any, you are making now; or to be able to accurately determine just about what each hen is capable of laying in a year and thus reduce feed bills and still get the same number of eggs.

Would You Hesitate?

If you knew that you could do all of this for the sum of $2.00. Walter Hogan's book,



"THE CALL OF THE HEN"

tells you just how to do this and more. It has been proven by the trap nest.

Send $2.00 to the **Sonoma County National Bank, Petaluma, Cal.**, and get the book; read it, try it out, and if you are not satisfied with the results, send it back and we return the money.

$5 AND UP NO MONEY IN ADVANCE

The "Dandy" is the easiest operated, best built, fastest cutting green bone cutter made. Sold on **15 days' free trial** with a broad guarantee. If it suits keep it, if not, send it back. Free catalog.

Stratton Mfg. Co., Box 17, Erie, Pa.

ROUP

Catarrh, Canker and other contagious diseases of poultry can be **controlled** and **cured.**

Protects Your Flock **B-K** *Destroys Disease Germs*

the powerful germicide—not a poison—clean, colorless. Ten times as powerful as carbolic acid but safe to use. Knocks the roup germ. Send 10c for large sample and free book "How to Cure Poultry Diseases."

General Purification Co., 625 Pioneer Bldg., Madison, Wis.

Colored Leg Bands

Mark your fowls with adjustable, *colored* Leader Leg Bands. Celluloid *colored* number strip. Rigid, strong aluminum band with turned over edge. Neat, secure. White, pink, red, blue, yellow, green, slate and brown. Prices: 12 bands, 35c; 25, 60c; 50, $1.10; 100, $2.00; 250, $4.50; 500, $8.50.

300 LICE Or More on One Hen

is by no means uncommon. No one would expect to fatten a steer with that number of "ticks" sucking his blood, but many expect the old hen to go ahead shelling out eggs while lice and mites are sapping her very life. We have counted over 2000 dead lice under a row of ten hens, on a roost board painted the night before with Lee's Lice Killer. This great killer does double duty—contact kills mites, lice, bedbugs, etc. about the roosts; the vapor kills lice on the chickens sitting over it. Put up only in airtight cans. For sale at over 10,000 towns.

Three sizes—35 cts., 60 cts., $1 00. Poultry Book free.

GEO. H. LEE CO. Omaha, Nebr.

YOUNG CHICKS

die of bowel trouble more than any other cause. It is estimated that of every 1000 chicks hatched each year less than 400 reach marketable size. Germozone users raise, usually, 90% of chicks hatched. Germozone keeps the bowels regular. It prevents diarrhoea from overdrinking of water; from eating musty or spoiled food, etc. It should be given in drinking water twice a week from the day they are hatched. It stops the loss. Every chick that dies cuts badly into the profit from the rest Every chick saved will pay the cost of a bottle of Germozone.

One size only, 50 cents, at dealer's or postpaid.

GEO. H. LEE CO. Omaha, Nebr.

GERMOZONE'S Big Value

is not so much in its great efficiency as a remedy for roup, canker, chicken pox and other diseases of poultry, but it is the greatest bowel regulator in the world for either poultry or stock (including pet stock), counteracting, especially, bowel troubles due to musty, spoiled or improper food. With man, fowls or animals, regular bowels means health. Continued irregularity means some sickness, difficult to cure if not fatal. Thousands give Germozone regularly twice a week to chickens, young and old, at the same time having it ever handy as a ready remedy for other diseases. Sold by dealers or postpaid. One size only, 50 cents.

GEO. H. LEE CO., OMAHA, NEBR.

ALDRICH WHITE ORPINGTONS

If you wish to succeed with poultry, start right by purchasing eggs from the best strain of the best and most popular of poultry, the S. C. W. Orpington.

Eggs At Reduced Prices

Our pens this season are the best ever mated in the world and contain over 200 trapnested prize winning females, each pen headed by a prize winning male at AMERICA'S BEST SHOWS. After June 1st eggs from these grand matings will be $5 per setting of 15, with the exception of our Special Pen, headed by Quality King, our 1st Madison Square cock, 1913, and our Pen de Luxe, headed by our 1st Madison Square cockerel, 1913, from which two pens eggs will be $1 each, and not over 5 eggs to one customer from each of these pens. Eggs from our $5 matings will be $3 per setting, or two settings for $5, and every customer purchasing $5 worth of eggs will receive our booklet "From the Shell to the Showroom" free.

Why Experiment?

When you can get the very best at such reasonable prices. NEVER BEFORE has such value been offered in eggs of such quality. We do not expect to show this season, except at Madison Square Garden, thus giving OUR CUSTOMERS A CHANCE TO WIN IN ALL of America's best shows.

After June First we will have for sale a limited number of this year's breeders at attractive prices. Mention the American Poultry Journal when writing.

The Golden Road To Success — Aldrich Chick Grower

A Specific for Bowel Trouble or White Diarrhoea

This preparation has been in use for over five years by the discoverer, *Mr. Leonard Rawnsley* and has met with marked success in the hands of *America's most* noted poultrymen.

Read following testimonial and send for circulars containing additional testimonials of prominent poultrymen.

Aldrich Poultry Remedy Co., Boston, Mass., April 7, 1914.
Gentlemen:—
Enclosed find $1.00 for one can of your Chick Grower, the greatest bowel remedy on the market that I have used and I have been an "easy mark" for all kinds. Last season I had two jars of your remedy and so far this season three cans and have not lost a chick since using it with bowel trouble. I have fifty chicks seven weeks old, they weigh 1½ lbs. each, following instructions in your little book "Shell to The Show Room."
Yours truly, E. E. Wood.

The price of *Aldrich Chick Grower* is $1.00 per quart jar, enough to raise 100 chicks beyond the danger point. Add *zone postage 3-lbs. Do not lose your chicks* when an *Absolute Remedy* can be secured at a nominal cost.

"How to Make Money With Poultry"

One of the Truthful(?) Poultry Tales of the "Good Old Days"

[NOTE—The following article is from "Ballou's Pictorial Drawing-Room Companion," bearing the date of May 14, 1859, and may prove of interest to our readers in that it shows even at this early date the rather "large" claims made for systems of poultry keeping. This article was copied from the files by Dwight H. Walker, LeRoy, N. Y.—Editor A. P. J.]

I SEE so many discussions about the profits of poultry in your paper that it induces me to suggest the following, which if faithfully put in practice, will give the desired result, viz., large profits. The object is to have hens that will lay an egg every day of the year.

Thus if you begin with 300 hens they must lay 300 eggs, or 25 dozens a day, or 9,125 dozens a year, which, at 20 cents per dozen, will be $1,825 a year; the expenses on this will be about $500.

If a man has five or six acres of land he can begin with 1,000 hens and about 80 or 100 roosters. He will have to enclose his land with board fences five or six feet high; make the hen houses along that fence, seven or eight feet wide, eight or nine feet in front, with doors and windows every fifteen or twenty feet—one or two roosting poles along the whole length back, so as to give every bird one square foot to roost—the nests can be put under the windows or back part of the house; there will then be sufficient space in the middle for a storm and feeding room to put them in stormy weather; the house in such weather being well supplied with clear water and ashes, lime and sand, for the hens to roll and dust themselves in.

The interior of the six acres will have to be divided into several divisions, which can be done with lath fences, so as to keep the poultry in as many distinct groups as possible. They will naturally roost in the house, the groups by themselves also, although it may be partitioned off for that purpose, and also well supplied with clean water every day, lime, ashes and sand.

The way to make them lay every day is to feed them on nothing but cut raw meat, which may be of any kind—horse or dog or any other meat, worms, caterpillars or offal meat. They will then lay every day certain.

No hens should be allowed to set. Any eggs that want to be hatched, should be hatched by artificial means (an eccaleobion) so as not to disturb the hens from laying. In the choice of poultry, discard all except good barn-yard fowl, Dominiques, Dorkings and Spanish will do well, and the common dung-hill fowl. These will prove uninterrupted good layers.

As above, a man with a thousand hens will get 30,416 dozens of eggs a year, worth 20 cents a dozen, $6,083.31, but in winter eggs will sometimes sell for one-third to one-half more, and often double the price in summer. Twenty to twenty-five acres will be sufficient to keep 100,000 hens, but then room should be had elsewhere to prepare the meat, the expense of which would be high, but the income would be large—almost fabulous, however true and certain.

Properly to estimate the expenses of feeding will depend on how the meat can be procured. Near a large city it will be less than elsewhere, owing to the better supply of dead horses, so that in a measure the greater number of hens the less the meat will cost; for there are any number of dead horses and dogs that can be got and even particularly a profit can be made on dead horses, so that the meat would cost almost, and in many cases, nothing; for the hides, the blood, the heads, hoofs and bones can be disposed of; the glue and prussian blue manufacturers will buy the heads, hoofs and joints; the buttonmakers will buy the large bones; cutlers will buy the small and flat bones for handles, or the rest of the bones can be sold to bone-dust makers for manure, etc., or the gluten can be boiled or made into gelatine.

Any quantity of meat can be prepared by chopping it fine, packing it into barrels with salt and pepper, and kept in a temperature a little above freezing, all the year around.

The hens eat the meat greedily, and thrive uncommonly on it. Anyone can thus graduate the income he is desirous to realize from any given number of hens.

No hen should be kept over four years. All at that age should be fed entirely on grain for three weeks, and then sold off.

I have set this ball rolling in motion, so keep it rolling.

But everything is to be done, first and at all times with attention, due care and perseverance. The profits with hens commence with the first day if it is properly put in execution and readiness.

NOTE—Mr. Walker writes us that Ballou's Magazine clipped this 365 egg hen tale from an article in an agricultural paper written by F. A. Nauts of Philadelphia. It was seriously written and intended, though one might credit the author with a humorous composition. Evidently in the "good old days" the public was just as ready to believe extraordinary yarns about poultry and get-rich-quick systems as it is today. We commend this tale to some of our experimenters who are claiming to have revolutionized poultrydom by producing 300 eggers from mongrel-bred stock. Mr. Nauts claims whole flocks of 365 eggers way back in 1859 and he evidently put his faith in the same sort of breeding material. From time to time various versions of this Nauts' meat feeding system for producing wonderful egg yields and fabulous profits have gone the rounds of the press in one guise or another. The author set his ball rolling well and it has kept on rolling, though no one has gathered any practical results. If Mr. Nauts was in the field today he would probably be drawing a good salary writing poultry bulletins about 300-eggs-a-year mongrels. Note the sublime confidence of the statement that: "They will lay every day certain," and, mentioning "dung-hills," "These will prove uninterrupted good layers." Aside from the literary style it reads a good bit like some of our loudly proclaimed twentieth century poultry systems. Any pipe-dreamer can figure poultry profits on paper, but it takes a good man to really earn the living for himself and family and a little something more in the bank. Compare this yarn with some of our modern poultry fiction.—Editor A. P. J.

Missouri State Poultry Expt. Station

Report of a Late April Visit to This Much Talked About Home of the National Laying Contests

By Prince T. Woods, M. D.

MISSOURI has every reason to be proud of her State Poultry Experiment Station at Mountain Grove. It is an experiment station that means something and that is doing good work for both State and National poultry interests. It is an independent station and not directly associated with the State Agricultural College, and that we believe to be a good thing for several important reasons which we need not state here.

The citizens of Mountain Grove gave the land for the experiment station, the State supplied the funds, Director T. E. Quisenberry planned and developed the poultry plant—and it is a real, practical working poultry plant, as well as a display plant and experiment station. Where many visitors come from all over the world to view the poultry and contest plant, it is necessary to have things conveniently arranged for visitors, to keep things spick and span and always in exhibition condition. On a commercial poultry plant, where labor saving and profit are matters of prime importance and visitors are looked upon as a necessary evil, there are many things that may be left undone that on show plant, intended to provide an object lesson for the visitor, must be well done. Missouri station is a show plant in a "show me" state and it is always on exhibition.

Mountain Grove is a small city about 1,500 feet above sea level and in the midst of the most beautiful section of the Ozark Mountains of Missouri. In New England it would be called a town, but nothing short of a city would satisfy the enterprising and red-blooded Missourians. Mountain Grove not only has the State Poultry Experiment Station, which is now known around the world, but it also has the State Fruit Experiment Station, which has won world-wide renown through the wonderful products of its well-kept orchards. Missouri can well afford to be proud of these stations and to give them ample financial support.

The city of Mountain Grove is on the St. Louis & San Francisco Railroad, about 300 miles southwest of St. Louis. One travels a few miles further than that since it is necessary to go via Springfield, Mo. We were called to Mountain Grove by Director Quisenberry for consultation work and left home early on April 20. Massachusetts, when we left, was cold and bleak and in the midst of a drizzly easterly storm. West of Pittsburgh we ran into fair weather, and from Columbus on we rapidly picked up all the beauties of springtime. The trip on the train from Springfield to Mountain Grove, on the morning of the 22d, was one to be long remembered, we wound in and out amid the Ozarks, gradually climbing grade until Cedar Gap, altitude 1,675 feet, was reached and a gentle down grade began once more. On every hand were beautiful mountain views, the spring sunshine was over all, on every side were hills, valleys, mountain streams and well-kept orchards in full glory of a wealth of sweet-scented blossoms, and in distance were mists of blue and gray.

Missouri has three great producing rural industries, fruit, poultry and dairying, and there is room for great development of all three in the beautiful Ozark country. Writing this on May 5, again in Eastern Massachusetts within four miles of the sea, with another wet, cold, easterly storm and the trees still bare, the apple buds only reluctantly beginning to show a bit of green, it seems difficult to believe that only about fifty hours from here by train we left behind the beginning of the good old summer time and that our New England's backward spring has yet to make a fair start. In the Ozarks, when we left, the woods were full of wild flowers, and either side of the railroad right-of-way was thickly carpeted with blue and white violets, while every fruit orchard was a blaze of blooms. We had a very pleasant and most interesting visit in the Ozark country and wish we could have staid long enough to find spring on our return home.

We are told that when the citizens of Mountain Grove donated thirty acres for the Poultry Experiment Station, about three years ago, the land was then covered with brush and a sadly neglected orchard. Today the plant has a well-kept orchard, green lawns, well-fenced poultry parks, well-kept attractive poultry buildings of various types, neat drives and cement walks. Director Quisenberry planned it all and with the aid of an efficient corps of helpers has built a modern exhibition poultry plant on the site of a neglected farm. Mrs. Quisenberry has been an important factor in the development and operation of the plant and is still one of its most earnest and helpful workers. Both Mr. and Mrs. Quisenberry are conscientious hard workers, they do not spare themselves nor do they consider time when there is work for the best interests of the station to be done. We spent the better part of three days as the guests of Mr. and Mrs. Quisenberry in their attractive home at the station plant, and we came to know them both quite well. We wish there were more such earnest work

The left-hand view shows a "bird's-eye" of part of the pens used for growing chicks at the Missouri State Poultry Experiment Station at Mountain Grove and was taken from window of the pathological laboratory. The large building in the foreground in the right-hand picture is the Administration Building. Here are the offices, the assembly hall, the pathological laboratory, the apartment for the plant superintendent, the incubator cellar and egg room, equipment exhibits and museum. The long building in the background is a large double brooder house on the Candee system. The tall building across the driveway at the right of the brooder house is the grain elevator, where feedstuffs are stored and milled for use on the plant.

ers, capable of such good team work, striving to better conditions in poultry research work. Mr. Quisenberry is fortunate also in his poultry farm superintendent and his assistants in the pathological and bacteriological laboratory. We found abundant enthusiasm, untiring energy and an eagerness for work that is well worth encouraging. Sometime we hope to

Superintendent Noland and a helper sweetening the poultry yards at Missouri State Poultry Experiment Station, Mountain Grove, Mo. Lime is being broadcasted and plowed under. Every precaution is taken to keep the yards in sanitary condition.

deal in detail with the chief object of our visit to the Missouri station, but at the present time we do not feel at liberty to discuss publicly matters which were brought to our attention in a professional capacity.

The experiment station is only a short walk from the railroad station and center of the city. Close by some of the finest residences in town are being built. Poultry seems to be a very live interest in Mountain Grove and folks there appear to have no objection to viewing a well-kept poultry plant from their front windows. Entering the station grounds the visitor comes first upon the residence of Director Quisenberry. To the right of this is the large Administration Building. Herein are the offices of the director, vice-director and their assistants, the egg room, a museum of poultry equipment and reception hall on the first floor. Upstairs is the apartment for the farm superintendent, the laboratories for pathological and bacteriological work, and an assembly hall. In the basement of this building is the incubator cellar equipped with a Candee mammoth incubator, and also the water supply plant.

In the rear of this building extends the poultry plant of the station and the laying contest plant with well arranged drives and walks. It isn't all complete yet, but it is in good show condition. Immediately in the rear of the Administration Building is an orchard given to brood hens and chicks. Beyond this is the large brooder house equipped with a Candee system. Across the drive from this house is the elevator and mill. The elevator has modern equipment for storing and handling grain, grinding mills, mixing machines, green food cutters, etc., all operated by an electric motor from city power, which is obtained at low cost. Extending on both sides of two drives are the yards and houses devoted to the station poultry, to growing chicks and to the laying contest pens. Each yard is plainly labeled with name of variety and of the owner. Every pen of adult fowls is mated with a good male. It is one continuous show of good thoroughbred poultry of the leading standard varieties.

While the contest flocks are all housed and yarded alike, the experimental flocks and growing chicks are housed in houses of various types. Each house bears a sign giving dimensions, cost, capacity, and the name of the originator. Mr. Quisenberry told us that the two houses of the Woods type and the Missouri Station Farmer's Fool-proof Poultry House, all with cement floors, were the only houses where it had been possible to keep the litter material dry enough to burn when removed at cleaning time.

The National Laying Contest is one of the very few contests where the competition stock is bred. All pens here are mated for best standard results. All laying hens on the plant are trap-nested. Records are kept of all stock. The eggs in-

A few of the pens in use for half-grown chicks at the Missouri State Poultry Experiment Station. This photo was taken in April, 1914, and shows a few of the many flocks of well-grown chickens, all pedigreed, hatched from eggs from the Laying Contest and Station breeding pens. In this row of yards are houses of many types.

cubated on the plant are hatched in pedigree trays and the baby chicks are banded. Records are being kept of several generations of good layers in the leading varieties. Breeders having pens in the laying contest have the opportunity to sell eggs from their contest pens, paying a nominal price to the station for the eggs. The station fills the orders, packs and ships

These views of the Laying Contest plant at Missouri State Poultry Experiment Station were taken specially for American Poultry Journal, during Dr. Woods' visit the last week in April. The wealth of beautiful apple blossoms in the orchard is well shown. The pen at the left is one of the Barred Rock contest pens and the right-hand view includes several of the Leghorn pens.

the eggs. In addition to this the station supplies from its own standard-bred stock, eggs for hatching to Missouri farmers at moderate prices. Also a very considerable number of market eggs are sold. Hatching eggs are packed in baskets lined with excelsior. The basket is first lined with newspaper, then with a layer of excelsior. Each egg is wrapped in paper and then with excelsior and packed snugly in the basket. When the full quota is in the basket, another layer of excelsior is placed on top and over this a muslin cover which is tucked tightly into the binding rim of the basket. Then the label is pasted on. The handles of the basket are raised and tied together so that the package is easily handled and nothing can be put on top of it. Eggs so packed are being shipped long distances by parcel post. The Missouri station is making a return of all funds received, from poultry and egg sales, to the State Treasury and in March paid in some $1,200.

Illustration shows one side of interior of the egg room, where all eggs are stored by pen numbers until required for use or to fill orders. This room is cleared of all eggs twice a week. Shipping baskets and cartons are shown on top of the egg cabinet. Another illustration shows the farm superintendent and a helper at work liming and plowing yards.

Breeding pens were showing fairly good fertility. Hatches were running from 80 to 85 per cent of fertile eggs and brooder house records showed from 15 to 20 per cent mortality in chicks between day-old and weaning age. Considering that the work is being done largely with competition flocks of all

One side of the egg room in Administration Building at Missouri State Poultry Experiment Station. Here are stored the pedigree eggs from the contest pens, each compartment being cleared of eggs at least twice a week. The baskets and cartons shown on top of the egg cabinet are used in shipping the eggs.

sorts and conditions and from various sections of the country and foreign lands, this can be considered a very good showing. It is probable that the brooder house is being charged with too heavy a mortality as it gets all chicks hatched regardless of their livability. There are about 1,000 adult birds in the contest pens and an equal number in the experimental pens. There were probably 2,000 or more growing chicks, some half grown, in the weaning pens, the brooder house was more than half full, and a hatch was coming off in the mammoth incubator at the time of our visit. All of the chicks are supposed to be fully pedigreed and recorded. Most of them were wearing leg bands, but a few husky enterprising birds had either shed or eaten their bands and so disposed of their pedigree for all time. Some difficulty had been experienced in getting suitable leg bands in blank, and the delay in getting bands was responsible for some of the husky youngsters outgrowing their identification marks. The station has its own system of pedigreeing and marks all bands accordingly, so that it has to have all bands in blanks. The system is a good one and facilitates identification of the chick; it will doubtless be fully explained when the next bulletins are issued. One thing we liked about the Missouri station is the fact that they are accumulating a lot of data and records that have every indication of value and they prefer to clinch these as facts before giving them publicity. When we get the Missouri bulletins they should be interesting and worth while.

Before we visited Missouri station we had heard many conflicting reports and we did not know just what we might find. We went prepared to be disappointed and were just a bit skeptical, for we have visited quite a few State institutions before now. We were agreeably surprised to find so good and

View of orchard with houses for brood hens with chicks at Missouri State Poultry Experiment Station, Mountain Grove, Mo. The Administration Building is shown in the background.

workable a poultry plant. The arrangement and equipment of the plant is good and no better poultry workers will be found anywhere. Director T. E. Quisenberry tells us that he has been interested in and a student of poultry since childhood and we believe him. He is showing good judgment in planning his work, and in his selection of assistants. He may be a promoter and publicity man as some have said, but no one who knows him in his own home and in every-day work will dispute the statement that he is also a real and practical poultryman with a strong, healthful interest in standard-bred poultry, and a man who is not afraid to put all of himself into hard work.

The Missouri State Poultry Experiment Station runs demonstration trains to teach poultry husbandry and conducts poultry institutes, which include lectures and demonstrations. This of itself is a big undertaking in a big State like Missouri, where considerable distances must be covered between demonstrations.

A Woods Open-Front Poultry House of large size used at Missouri State Poultry Experiment Station, Mountain Grove, Mo. This house has a thick cement floor and is considered one of the most satisfactory poultry buildings on the plant. The litter in this house stays dry and there is never any trouble from damp litter, such as is experienced in some of the houses of other types.

At the station there is much research and experimental work under way. Most of it appears to be conducted in a practical manner that can be expected to yield practical and helpful results. We are glad that we visited Mountain Grove this spring, the trip gave us a lot to think about and it is a pleasure to know that down in the "Show Me" country they have a State Poultry Station that is a credit to the whole country.

The Menace of Oriental Egg Importations

Poultrymen All Over the Country Should Institute a Publicity Campaign In Favor of the American Egg

By C. O. Engel, Seattle, Washington

PTIMISM makes the wheels of trade go round, it makes the rooster walk on his toes, it makes the hens cackle, it makes the poultryman self-confident! Prior to the passage of the Underwood tariff bill, admitting eggs duty free to the United States, poultry publications and representative poultrymen throughout this country, especially those of the Pacific Coast, were extremely optimistic regarding the possible importations of the foreign product in sufficient quantities to affect our home markets.

Today, barely six months since the adoption of the new law, the yellow man's egg is already demoralizing local trade conditions and threatening to undermine our great American billion dollar industry. Chinese eggs are now fairly flooding all seaport cities of this coast from British Columbia to Mexico. They are being dumped on the Portland, Tacoma and Seattle markets in one to ten thousand case lots, while San Francisco is literally being swamped by shiploads. Even via Canadian ports a stream of Oriental eggs is pouring into this country. On April 6 the steamer Empress of Russia discharged at Vancouver, B. C., a single shipment weighing one thousand tons,

HOUDAN COCK HEADING FIRST PEN BOSTON JAN. 1914
BRED AND OWNED BY
JAS. ABERNETHY W. PEMBROKE, MAINE

containing 6,792,360 Chinese eggs. Though nearly this entire consignment was destined to points in the United States, only 1,500 cases went on sale in Seattle, the bulk being for distribution in eastern centers, where they will probably go into storage for winter use.

What is the immediate effect of this Oriental egg competition here on the Pacific Coast? An excerpt from the Seattle Post-Intelligencer, the leading conservative daily of the Northwest, under the caption, "Surplus of Chinese Eggs Upsets Market," reflects the situation of April 16 as follows:

"Eggs dropped with an unmistakable reverberation today to 22 cents. Despite the claims earlier in the season, the storage of high priced eggs has been limited, and from now on, the street will go light on this sort of collateral. The Chinese egg trade forecasted to run heavily is more of a menace than at first supposed, and it requires considerable courage for a

First Prize Columbian Wyandotte Hen at Tampa, Fla., the past season. Owned by J. H. Wendler, Lakeland, Fla.

Seattle jobber to put away stock for winter, when he realizes that the imported article can be handled at a profit of 5 and 10 cents under what he can do business for next winter. Millions of Chinese eggs are now on their way to eastern markets to be stored for the winter, and they will come out at the time of highest values. The effect can be nothing but demoralizing, and the jobber with the greatest number of high-priced eggs on his hands will be hardest hit. It is not believed there will be any storage of eastern eggs at Seattle this year."

From the same cource, under date of April 18, I quote the following: "Egg jobbers are wallowing in an uncharted ocean. There is now no attempt at equivocation, so serious has the problem become, and the situation resolves itself almost into one of self-protection against a falling market and the sweep and menace of the despised Chinese egg. Jobbers denounce the quality of the imported article with great vehemence in their price lists to shippers and to customers, but there always lurks a fear of what may befall when eggs stored at the present level are hauled out next winter as a competitor against the Oriental stock. Losses are freely predicted. Packers plunged heavily at the opening of the season, but on probing into the facts suddenly ceased operations with storage spaces unfilled."

Let us pause and allow this last sentence to sift in. Think of it! Already the eastern markets are beginning to feel the shadow of this Oriental octopus. What then are the eastern producers going to do in the face of this stupenduous problem?

What are the Pacific Coast producers going to do with their products during the bountiful "money making" months of March, April and May, if the storage people can no longer afford to handle American eggs? And the middle western producer with his immense output of eggs usually put into storage? Pacific Coast jobbers have heretofore annually taken thousands of carloads of eggs off their hands both for market and storage purposes. With the advent of the immense importations of Chinese eggs to our shores, jobbers say there will be no eggs stored on this coast next spring, and the American egg during the flush season will be a drug on the market.

Unless the American poultryman comes out of his dream,

ruffles his feathers a bit and does something, we will have instead of a surplus of eggs, a surplus of second-hand poultry equipment and be running ads in local papers featuring the merits of defunct poultry plants without getting a nibble, let alone a raise, out of a possible purchaser. No, this is not painting things too black, but a case where an excess of pessimism makes for optimism.

Certainly this is no time for equivocation, for petty squabbles among ourselves, for such continued freak legislation against storage interests as was recently introduced in the House of Representatives by Congressman McKellar of Tennessee, which provided that eggs should not remain in cold storage for a longer period than three months. Needless to say, such amateurish attacks only tend to influence the storage people unfavorably, and in a measure restrict storage operations to the detriment of both producer and consumer. Imagine the situation—store in April and sell in July! It goes without saying that under such a ruling no eggs would be stored at all, because there would be no market for them in July.

Everybody has been taking a fling at the storage man from the would-be-high-cost-of-living-reformer to the ill-advised House-wife's League, and now comes the yellow man with his deluge of little brown eggs. The fact is, that the storage man is next in importance to the producer, in maintaining a healthful abundant food supply for a nation of people who are more and more coming to know the importance, we might almost say necessity, of good food kept under sanitary conditions.

To keep to the text, we have the Chinese eggs with us now in millions, and there are billions of them on the way. We will have to solve this problem sooner or later. The best time is NOW. Concerted action is what we want. Every hat must go into the ring! What is the remedy? Publicity for one. Would suggest that poultry journals and periodicals throughout the country unite in soliciting funds from their subscribers, and those interested, for the purpose of instituting a grand publicity campaign. A general or central committee should be appointed to handle these contributions and to personally investigate the conditions under which Oriental eggs are produced, and publish the facts broadcast throughout the country. This would be an eye-opener for the American consumer that would make him think twice, and dip deeper into his pocket rather than allow the filth-fed Oriental egg to grace (or disgrace) his table.

The Chinese egg at its best is not fit for human consumption. Slow Oriental steamers without refrigeration or storage facilities are used in shipping these eggs to the United States adding still further to their depreciation. The select American egg is a big egg, weighing upwards of 24 ounces to the dozen, while the Chinese egg is a small affair barely averaging 15 to 16 ounces to the dozen. The difference in price of 2 cents per dozen for the past two months on the Seattle market between the Chinese and the local fresh article does not make up for the deficiency in quality or quantity. Poultrymen know these things for facts, but the general public do not. Hence the necessity of a systematic nation-wide publicity campaign against the undesirable Oriental egg.

If upon thorough investigation China's importation of eggs fail to measure up to our pure food standards, action should be secured by either national or state government that will prevent further importation under the provisions of the pure

food law. State legislatures should be appealed to, to pass a law compelling each imported egg to be so stamped, which would protect both producer and consumer.

The stamping of eggs, all eggs, intended for human consumption would prove a move in the right direction. The date and any kind of mark that would distinguish them as "American laid" would help greatly in putting the egg business on a firm basis. For the present, at least, with the menace of the Chinese egg at hand, it is your one best bet and your only protection. Isn't the American hen with her billion dollar industry and her unparalleled, well-fed, healthful, necessary food product—the egg—worth fighting for?

Electric Power on the Poultry Farm

Large Commercial Egg Farm in California has All Buildings and Poultry Houses Lighted and Equipped With Electric Power

By John Y. Beaty

POULTRYMEN living easily accessible to moderate priced electric power are indeed fortunate. No cleaner, safer power can be found anywhere. As an example of the practical use of electricity on a poultry farm I will cite the experience of A. W. Foster of Hopland, Cal.

Mr. Foster has a large commercial egg farm with about six thousand layers. He raises alfalfa, kale and Burbank's spineless cactus for green stuff and uses electricity for irrigation purposes. The power house is located on the bank of a river that runs through the farm, and underground pipes carry the water to hydrants in different parts of the field.

The water is run from the hydrants without any ditches to direct its course and the fields are flooded in this way once after each cutting, which makes it necessary to grade the field. It is fairly level but by no means sufficiently level to be irrigated by the ditch method.

All of the buildings are lighted by electricity, and at 5:30 each morning the lights are turned on and both the men and the hens begin work. With this early start the hens are busy long before the average flocks are about, the eggs are laid earlier, gathered and packed early in the afternoon and shipped before the new laid bloom has had time to wear off.

Mr. Foster has installed a complete mill in his feed barn and an electric motor shells corn, grinds feed and mixes it. One man is kept busy at this job most of the day.

Gas is used for heating the incubators and brooders. Electric motors operate the gas machine and because of the importance of a constant supply of gas, two electric motors have been installed, one being used as an auxiliary. In addition to this there is a hot air engine which serves in extreme cases when something interferes with the electric current.

Near the residence is a large centrifugal pump to which is attached an electric motor which furnishes the water supply for the place. A ten thousand gallon tank serves for storage,

Bird's-eye View Mount Pleasant Farm, Mount Pocono, Pa.

and the motor keeps this full by an automatic switch that is operated by a float in the tank. Little more thought is given the water supply than is given a city supply by the average consumer. The tank is always full, and the pump always starts when the water level has been lowered a little. When the water level is again at the right height, the float shuts off the motor.

Automatic System of Record Keeping

13,000 Fowls on This Successful California Farm—Eggs Sold Mostly in Case Lots to Individuals who Distribute to Neighbors.

By John Y. Beaty

A SYSTEM of keeping the records of a large poultry farm, that is automatic in its workings, is used by the Hopland Stock Farm, of Hopland, California. This farm accommodates about 13,000 head of stock, mostly White Leghorns, though some of the other white varieties are being added, to meet a demand that is growing in California for a white bird that produces a good amount of meat.

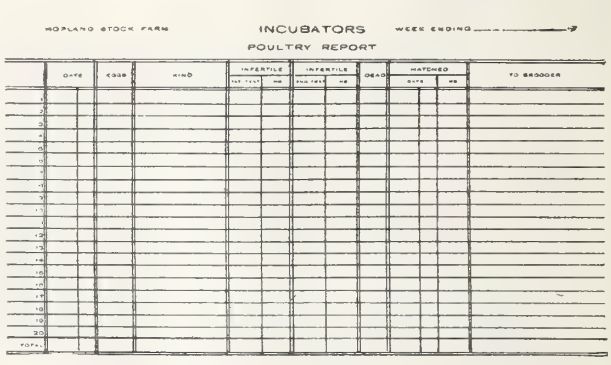
The farm is located about ninety miles from San Francisco where the products are marketed. Eggs are sold mostly in case lots to individuals who distribute them to neighbors. In most instances a neighborhood buy a case a week.

This farm consists of over two thousand acres of valley and rolling land, with a mile and a half frontage on the Russian River. Not all of the land, however, is used for poultry.

A system of record keeping has been evolved by the management, which insures a daily knowledge of the workings of the entire farm. The record sheets include those of incubating, brooding, rearing, colony housing, and laying. These sheets with instructions for change in feeding, or other instructions, are posted weekly. The workmen follow these directions and the record sheets thus serve, and are filed, as both sheets of direction and of record.

The record sheets in use for the different departments, five in number, are each of a different shade, varying from a pale lemon shade to a deep orange, and including a light drab.

It will be noticed on the brooder record sheet that not only the incubator from which the chicks were hatched is recorded, but the breed, date hatched, number in pen, number died, number sold, and the food. Half of the sheet is used to indicate the kind of food, the quantity, price and total cost; this part being divided into sections with a space for the different kinds of foods, those most commonly used being printed on the sheet and blank spaces left for the others. These records make it possible to keep a weekly account of stock on hand and the actual expense and percentage of profit.



Trough for Mixing the Cement. See Article, Cement Floor for Poultry Houses.

When the chicks have reached the colony houses (which are numbered from 1 to 100), it will be seen that when they are moved from one part of the farm to another, the exact pen from which they came is recorded and the chicks from two pens are never combined unless they are of exactly the same breeding, which makes it easy to keep the breeding records of every bird on the farm.

A single sheet is used for all colony houses, a new one being provided weekly, but when the birds are moved to the rearing houses, a separate record sheet is used for each rearing house, these records being printed on different colored paper for each house, which makes it easy to separate the records when they are bound.

When the birds are moved from the colony houses to the rearing houses, the pens of similar breeding are combined according to the number that can be accommodated in each yard.

The birds that are selected for layers are assigned at the proper age to one of the laying houses, which are double deck, open-front type with cement floors. These laying houses have food and litter carriers and are cleaned daily. There are two of these long houses, one 24 x 400 feet, and the other 24 x 430 feet, each being divided into twelve pens. Each of these houses accommodates 4,000 layers. The upper floor is for the roosting and laying, the lower floor being used for a scratching shed. A long runway, the length of the pen, connects the two floors. This runs parallel to the house and is under cover so that the birds may readily go from one floor to the other even during stormy weather.

Each pen has a double yard, one in front and one in the rear, the yards being the width of the pens and about one hundred feet long. The fences are eight feet high, which would almost seem unnecessarily high, but when the food carriers start at one end of the house some of the most active pullets in a hurry for rations will fly this fence.

The incubator house is floored with concrete and is located near the office where it receives the careful attention it requires. Heat is furnished by a gas machine operated by an electric motor. A second motor is provided for emergency cases, while still another precaution is the provision of a hot air engine which serves when the electric current is shut off for any reason.

The brooder house is heated by steam and accommodates something like 4,000 chicks, the rearing houses being smaller, each housing 50 chicks.

Special houses and pens are provided for the breeding stock where all the hens are trap-nested, selected and reselected. Every hen must make a good record to be retained in the breeding flock.

The equipment includes a mill, grinder, corn sheller, mixer, and chopper. In the food room there is also an electric mixer and a bone cutter.

The proper filling out of these daily records as used by the Hopland Stock Farm requires some intelligence, which has made it necessary to employ intelligent labor. As the manager expresses it, "If I had not installed this system of record keeping, I probably would be tempted to employ foreigners who earn their money only when used in groups and are driven. With our present system we must employ intelligent Americans and as a result I get men who can be trusted to work by themselves. I employ at all times three men with families and furnish them with houses to live in. In addition to these, all of the single men employed are provided with good quarters in which to sleep with clean, comfortable bedding. They are also fed better than most farm hands in the state. We have no products for sale except of high quality and for good goods we expect, and receive, good prices."

Report of National Egg-Laying Contest

Plans for the Next Contest—Leghorns and S. C. Reds Leading—All Hens, Good and Bad, Average Twenty Eggs Each for April

By T. E. Quisenberry

WE FIND that 90 per cent of the proven best layers by the trapnest are the smallest birds,'' is a statement just made by one of our greatest poultrymen and one of our best students of the problems of egg production. The weights of the birds entered in the National Egg Laying Contest conducted at this place for the past three years and the egg records all indicate that this statement is absolutely true. No matter what the variety may be, if a pullet of that variety makes a good egg record, upon weighing her we find she is usually from ¼ to 3 pounds under standard weight. ''Lady Showyou,'' the White Plymouth Rock hen which laid 281 eggs in our first contest, only weighed 6 pounds, being 1½ pounds under standard weight. ''Missouri Queen,'' the R. C. White Leghorn pullet which led last year and made a record of 260 eggs, only weighed 2¾ pounds. While there is no standard weight for this variety, yet this pullet was the smallest of 36 pullets of this variety which were in the contest.

The highest record we have ever had made by a Barred Plymouth Rock, the pullet was 1⅛ pounds under weight. The Black Langshan, which made the best record, was nearly 2 pounds under; White Orpington, 2 pounds under; White Wyandotte, 1 pound under; Silver Wyandotte, ¾ pound under; Buff Wyandotte, ½ pound under; Buff Orpington, 2 pounds under; Black Orpington, 2 pounds under; Black Minorca, 1¾ pounds under; and so on through almost the entire list of varieties. On the other hand, the majority of the pure bred hens which make the poorest egg records are up to standard weight or considerably over, as a rule. Not more than 10 to 25 per cent of the best laying pullets of any variety are ever up to standard weight. During the past three years we have had birds from several hundred breeders, and our experience is that this is usually true, no matter what veriety it may be or from what breeder they may come.

With dairy cows, the best producing Jerseys and Holsteins are not of the beef type. One of the leading dairy experts of this country once said to me when showing me his high producers, ''These are our very best cows, but it sometimes disgusts me to hear visitors criticise them and make uncomplimentary remarks about these cows, and then compliment our heavier, fatter dairy cows of the beef type which give but very little milk or butterfat.''

Can it be that we have our standard weights on some varieties a trifle too high? We know of one quite prominent breeder of Barred Plymouth Rocks in this State who has often bragged about having a strain of Rocks that were from a pound to three pounds above standard weight. That same breeder is now disposing of his entire flock because they do not lay enough eggs to pay the cost of production. We think it best to have the standard for all things quite high for the per cent of those who reach their ideals is quite small. We don't advocate breeding small birds, but we do think we can overdo the thing and ruin all chance of profitable production by going to the other extreme. Simply because a hen or pullet was a pound or two underweight and was a good producer, healthy and vigorous, I would certainly not discard her from my breeding pens. It might be well to give this matter some thought.

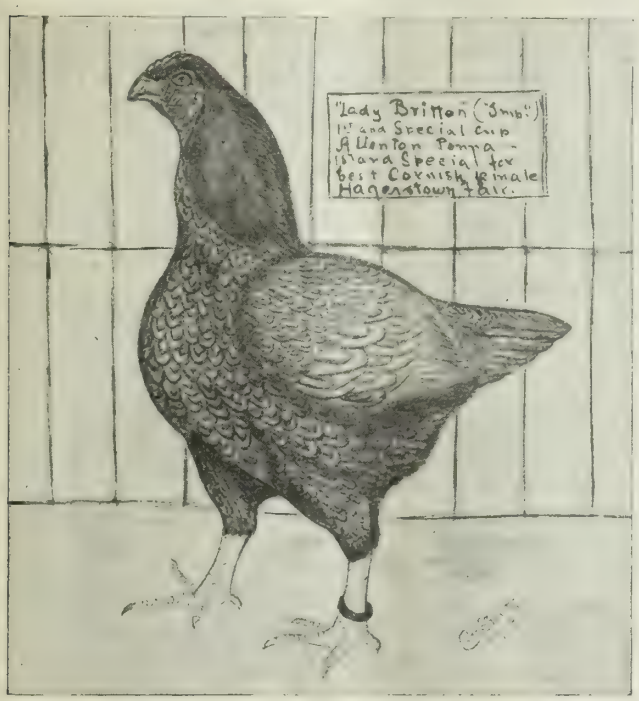
Late Hatches.

If you haven't yet hatched all the chicks you need this season, I would still continue incubation. While we are firm believers in early chicks, yet many good show birds and many good producers are hatched in June, July, August and even in September. A great deal depends upon the season, and the condition of the breeding stock. Eggs are usually cheaper from now on, and it's worth the effort, at least is it so if you are short on young stock.

Swat the Rooster!!

One year ago we started a ''Swat the Rooster'' campaign in this State among the farmers and poultry raisers, and we established what we call ''Rooster Day.'' This work has since been taken up by Ohio, Kentucky, Tennessee and other States, and the United States Department of Agriculture is now coöperating to push the good work along. Millions of dollars worth of eggs are lost each season and made absolutely unfit for food because the eggs were fertilized and the germ grows and develops during the hot weather. An egg doesn't have to be in an incubator for incubation to take place. The temperature in the average living room or the average country store is high enough in hot summer months to render any fertile egg unfit for food long before that egg reaches the consumer.

Saturday, June 6, has been set apart as ''Rooster Day'' in Missouri. The breeding season will practically be concluded by that time. Nearly all buyers and dealers in the State have agreed to pay a higher price for males on that day, and most of them have agreed to pay 1 to 2 cents per dozen more for clean, fresh, infertile eggs than for the ordinary run of eggs. All males will be confined, killed or sold on that date. It is not necessary to kill or confine valuable males, but they can be confined



or separated from the laying hens. The increase in price of eggs in Missouri of only 1 cent per dozen will mean an annual increase of over one-half million dollars each year to Missouri farmers and poultry raisers. It ought to be a universal practice for the poultrymen and farmers of this country to market infertile eggs during the hot summer months. The saving would be tremendous. In Missouri alone, it is estimated that the annual loss is about $3,000,000. Not only would we save this loss in wasted eggs, but we would create more confidence on the part of the consumer in market eggs and thus increase consumption. ''Swat the Rooster!''

Next Contest—November 1st, 1914.

Many entries are already coming in for the next contest to begin November 1, 1914. We would like to reserve places for all who desire to enter pens. About the same rules will govern as in the past, except that each pen will consist of five pullets and one reserve. We had to turn down several hundred entries last year, so we advise all to reserve pens as soon as possible.

There can be no doubt about the benefits of a contest conducted as ours is conducted. The average production has increased twenty eggs per hen in the past three years in our contest.

The total eggs laid in April was 20,251, which makes the grand total for the five months 69,602 eggs. The average for all hens, good and bad, was twenty eggs each for the month. The English White Leghorns are still leading, but the S. C. Reds gained on them this month. White Wyandottes, White and Buff Orpingtons, Barred and White Plymouth Rocks, Anconas and Buff Leghorns are also making exceptionally good records. Other varieties are improving and we expect to see many of

"Lady Britton," unbeaten in England and champion Cornish female of America. Imported and owned by Jaquelin Farms, Warrenton, Va. First and Ward cup for best Cornish female, Allentown, 1913; first and special best Cornish female, Hagerstown, 1913; first and special American Cornish Club show, 1913, and first Baltimore, Md., 1914.

those which were slow to start, continue to lay after many others have gone broody or quit laying. The leading hen is a Black Rhinelander entered from California, but imported from Germany. Most of the Rhinelanders have never been in the best condition. The R. C. Black Minorca and the Rhinelander females resemble quite a bit, the Black Minorcas being the largest. The R. C. Black Minorcas entered this year have not really had a fair show. Two of the pens appeared to be immature when they arrived here and all three arrived in rather poor condition, and they have suffered from various causes ever since. We have long since learned that birds in poor condition, like a man in poor condition, not much can be expected of them. This fact alone is almost entirely responsible for the showing made by several pens.

The best pen record made thus far by representatives from the various countries is as follows:

	Eggs
S. C. White Leghorns made best English record	1073
S. C. Reds made best United States record	944
S. C. Reds made best Missouri record	944
White Wyandottes made best Ontario, Canada, record	750
S. C. White Leghorns made best Vancouver Island record	739
S. C. White Leghorns made best New Zealand record	723
S. C. White Leghorns made best British Columbia record	719
S. C. White Leghorns made best Australian record	644
S. C. White Leghorns made best South African record	603

Twelve Highest Pens.

Pen		Eggs
0	S. C. White Leghorns, England	1073
47	S. C. Reds, Missouri	944
18	White Wyandottes, Pennsylvania	893
38	White Orpingtons, Pennsylvania	867
79	S. C. White Leghorns, Pennsylvania	857

79	S. C. White Leghorns, Pennsylvania	234
47	S. C. Reds, Missouri	233
69	S. C. White Leghorns, Kentucky	232
73	S. C. White Leghorns, New York	232
74	S. C. White Leghorns, Pennsylvania	229
48	S. C. Black Minorcas, Missouri	226
80	S. C. White Leghorns, Missouri	226

The above shows the standing of the twelve highest pens in all three experiments to date, and also the twelve highest pen records for April. Ten pullets are used in each pen.

The Twelve Highest Individual Records.

Two pullets laid 30 eggs each in 30 days in April, White Orpington pullet, 896, from Missouri, and S. C. White Leghorn pullet, 611, from Nebraska. No one pullet has yet gotten very far in advance of the other individuals. Quite a large number have over 100 eggs each to their credit and the leading one has 122 eggs. The record of the twelve highest individuals for the five months past is as follows:

One of the many high class Buff Orpington males on Old Forge Poultry Farm, Spring Grove, Pa.

Pullet		Eggs
118	Rhinelander, California	122
5	S. C. White Leghorn, England	120

EDITORIAL

WE LEAD OTHERS FOLLOW

65,000 A. P. J.'s for June, 1914.

State of Illinois, County of Cook, ss.:
G. M. Atwell, president of the Atwell Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding 65,000 copies of the June 1914, issue.

G. M. ATWELL.

Subscribed and sworn to before me this 21st day of May, 1914.
(Seal) HENRY G. EISERT, Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

AMERICAN POULTRY JOURNAL

TRADE MARK REGISTERED, NO. 74,059.
Issued the first of each month.

Foreign, 1 year, $1.50; 3 years, $3.50.

Look at the address on your wrapper. See that it is absolutely correct and notify us of any mistake, no matter how slight. Note the expiration date which appears thereon, as American Poultry Journal stops with the issue marked on your wrapper.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Boston to Have a Poultry Weekly.

BOSTON, Mass., is to have a new poultry weekly. This month, June, Poultry Husbandry, of Waterville, N. Y., will be merged with Farm Poultry, of Boston, Mass., and the magazine will continue monthly under the latter name through June, July, August, September and October. Beginning with the issue for November 7th, the magazine will change its name to the Poultry Weekly, continuing much of the outward form and features of the present Farm Poultry, and will be issued every week.

When Farm Poultry changed hands a few months ago, it was a foregone conclusion that there would soon be a change in name, as it was quite well known that Editor Robinson did not consider the present name sufficiently broad to cover its particular field. The change to a weekly was not wholly expected, as it is only a few years since Mr. Robinson was very strongly in favor of a monthly. Until the first weekly issue, subscriptions are to be taken at 50 cents for 52 numbers, but after that the subscription price of Poultry Weekly will be $1 a year and its promoters announce it as "a twentieth century poultry paper." Editor D. M. Green, of Poultry Husbandry, will be associated with Editor John H. Robinson in the conduct of the consolidated papers.

Farm Poultry was first published in September, 1889, and continued as a monthly until January 1, 1895, when it became a semi-monthly and so continued until July, 1908, when it again became a monthly publication. Announcing the change, Editor Robinson wrote editorially, in part, as follows:

"We need not here discuss the relative merits of monthly and semi-monthly issues, farther than to say that in our judgment the net advantage is with the monthly. * * *

"To the editor, especially, this is a welcome aspect of the change. We never expect to reach our ideal in editorial work, but we can easily see how with a little more time for investigation, reflection and revision of editorial contributions than we have had in the past, we can give readers a great deal better paper. * * *

"By advertisers generally we know the monthly issue is preferred. * * * The writer, who was a reader of and advertiser in the paper both as a monthly and semi-monthly, before engaged on it, has always been able to appreciate the attitude of these advertisers, and has always felt that as long as a paper continued a policy objectionable to so large an element of possible patrons it was not contributing all it might to the development of poultry interests.

"From our point of view, the monthly is 'all to the good,' and if any of our patrons feel otherwise we think they will come to our way of thinking after a brief acquaintance with Farm Poultry, Monthly."

That was written six years ago, and fortunately times change and men and things change with them. There ought to be ample room for another good weekly poultry paper. In foreign lands most of the poultry papers are weeklies, and surely we should be able to support a few in the United States. It means a lot of extra work and not the least of this will be in getting advertisers to fall into line and to have copy in before the forms close. In his May, 1914, announcement Editor Robinson says:

"The writer has believed for some years that the demand for a poultry paper in this country, and especially in the East, could be fully met only in a weekly devoted to all phases of poultry culture and giving some attention to various interests closely allied with it. Until the proposition to combine the two papers came up, however, he considered the question of issuing a weekly paper as one to be perhaps considered when the monthly reached the natural limits of its development. When the effects and possibilities of combining the circulations and organizations of the two papers were considered in detail it was apparent that this was an opportune time to change to a weekly issue and the decision was made accordingly."

More detailed announcement of the change is to be made in the June number of Farm Poultry and it is stated that the policy of the paper is to be somewhat different from the customs now in vogue. It seems a bit odd to think of D. M. Green and John H. Robinson bunking together editorially, but after the love feats of Messrs. Robinson and Curtis during the recent meetings of the A. P. A. Committee on Constitution, one may expect almost anything to happen.

Poultry Weekly and its editors have our best wishes for success. May they live long, wax fat and prosper!

American Poultry Association Election.

RETURNS from the Election Commissioner dated May 5th show that you cannot always judge an election by the nominating ballot. Chicago, which held second place on the nominating ballot with only 174 votes, wins the thirty-ninth annual meeting with 980 votes on the final ballot against 841 for Detroit. Of course we are glad that Chicago gets the meeting and we believe it will prove a record-breaking convention. Chicago will certainly make everybody welcome and provide entertainment that will long be remembered by the members who attend. The meeting is to be held August 10th to 15th, and we hope that every member who possibly can will COME TO CHICAGO.

President E. B. Thompson has been returned to office with the handsome total of 2,376 votes. This means that he is to be given ample opportunity to do the work he has begun for the best

interests of the organization, and we believe he will make good.

First Vice-President is Joseph Russell, of Toronto, Canada, with 2,329 votes to his credit, and this should help to make our big association more truly All-American. A. A. Peters, ever an able presiding officer, holds the Second Vice-Presidency with a fine showing of 2,313 votes.

The three members elected to the Executive Board are A. C. Hawkins, of Massachusetts; Henry Steinmesch, of Missouri, and Earl Hemenway, of Michigan. It would be difficult to pick out three "Ms" among the States more worthy of the honor. Evidently the voters decided to discourage over-long terms in office. Mr. Hawkins received 1,217 votes, or 637 more votes than his opponent in his home state. Mr. Steinmesch had 1,048 votes and Mr. Hemenway, 833.

By a vote of 554 to 31 it was decided not to change the name of the Rhode Island Reds. This is a matter for congratulation for the name of Rhode Island Reds means something and should be retained.

The 39th annual meeting, August 10th to 15th, at Chicago, will be an important one. Every member who has a live interest in the association should attend. The new constitution and laws of the association, which have been carefully worked out and prepared by the Committee on Constitution, including some of the most able men in the organization, are to be considered and voted upon. It is hoped that these new laws will help the association to be more truly useful and less cumbersome. Members are to be fully advised concerning the proposed Constitution and Laws well in advance of the meeting and will have abundant opportunity to familiarize themselves with them. We have not yet received an authorized copy of the committee's report with release for publication. When we do, we expect to call the attention of our readers to the more important sections. The A. P. A. Bulletin is to furnish each member with the complete text. There is other important work to come before the convention, including final matters concerning the 1915 Standard and the reports of various important committees. Everybody who can should plan to come to Chicago in August.

—o—

More About Open-Front Houses.

IN THE May Poultry Herald, Editor Harold A. Nourse pays us a very great compliment. He says: "Dr. Woods, Editor of the American Poultry Journal, who lives in Massachusetts, the writer's home state, is known among the poultrymen of that section as a 'crank' on open-front houses."

We consider it a very great compliment to be known as a "crank," if the statement is true, for the "cranks" in this world keep things moving, and there would be little progress without them. Mr. Nourse devotes quite a little space in presenting his objections to open-front poultry houses, but his remarks are singularly devoid of facts.

He assumes that only a few poultry keepers in the Northwestern part of this country use open-front houses and he doubts their success. He says: "Some of them have been able to keep fowls alive in such quarters and a few, under particularly favorable conditions, have been able to get a reasonable egg yield during the winter. Most of those with whom we have come in touch terminated the experiment at the end of the first winter, or earlier, and remodeled their houses. Most of the poultry keepers in this territory, however, stick to what we call a sensible house, one that affords protection when protection is needed, yet is capable of being opened to admit plenty of fresh air when opportunity offers."

We don't know just what Mr. Nourse considers a "sensible house," but from his previous remarks we infer that he favors the curtain-front type of house with a curtained roosting closet. The roosting closet is an abomination and is directly responsible for much poultry disease. The curtains get dusty and damp and then supply just about as much ventilation as a tight board wall. For a good many years we have been investigating poultry diseases on poultry plants all over this country and we have commonly found tuberculosis and catarrhal diseases rampant on poultry plants where the curtained roosting closet is used.

First Price White Rock Hen at the Great Coliseum Show, St. Louis, Mo., Nov. 1913. Bred and owned by Dr. L. D. LeGear, St. Louis, Mo. Farm at Kirkwood, Mo.

We care very little what type of open-front house a poultryman uses so long as he uses a good one, and there are several such. The leading poultry authorities all over this country have endorsed the open-front house. We wish that Editor Nourse would publish the names and addresses of the poultrymen he knows who have failed with the open-front house and who have been obliged to remodel same. We also would like to have any of our readers who live in the Northwest write us full details of their experiences with open-front houses. Give us the truth about it.

Why bother to get fresh air into your "sensible" house "when opportunity offers," Mr. Nourse, if it is so desirable to shut out fresh air at night? Of course, everybody should know that a fowl's need of fresh air is greater at night than by day, but small matters like that probably don't count with sensible folk.

The assumption that an open-front house does not afford protection when needed is silly. In a well-built open-front house there is ample provision for protection and comfort. In fact an open-front house is far more comfortable than a closed house that is not supplied with artificial heat. As to frosted combs, in our experience covering many years and a multitude of poultry plants, we have been called upon to prescribe for many cases of frosted combs in closed buildings,—much more often than where open-front buildings were used.

We have before us a letter from J. W. Danfield, Kingsbury, Quebec (the full text of which is given in another column), in which he reports experience with a Woods open-front house during the most severe winter weather his section has known for years. During February there were nineteen nights when the temperature registered below zero; once it was 46 degrees below, once 45 degrees below, and on ten other days ranged from 20 to 37 degrees below zero. He has Rose and Single Comb Rhode Island Reds. Had an excellent egg yield. That the fowls were in fine health is attested by the facts that the severe cold did not interfere with the egg yield, that thirty-seven birds produced 453 eggs during the month; that six of these birds laid twenty eggs or better each during the twenty-eight days, and one pullet laid twenty-four eggs; that not a comb was frosted and of four cockerels two had their wattles only slightly nipped, but not enough to call for treatment, and that the eggs from this pen ran 92 per cent fertile in April.

We don't know what Mr. Nourse would call success, but we do know poultrymen who were almost down and out when they adopted open-front houses and who now earn good incomes and ride around in automobiles that their poultry paid for. One man in particular about eleven years ago was about to quit the poultry business as a failure; he was encouraged to put in open-front houses and practice open-air methods. Today he owns outright a poultry plant worth $15,000 or more, has as fine a big flock of breeding stock as we ever saw, is doing a prosperous business and for several years past has been enjoying life with the latest models of one of the best makes of automobiles.

We know another man, whose father keeps fowls. When our friend built his first open-front houses the old gentleman used to hustle out to them in the morning to find out how many fowls had frozen to death; he was mighty anxious to "get one" on son John for building such a "fool house." He was astounded to find that the water froze more quickly in his own closed house than it did in the one with the whole south end open, that John's fowls were not only more comfortable but laid more eggs and the eggs ran more fertile and hatched better chicks; also that while he had badly frozen combs in his closed and "sensible" house, not one of John's birds suffered from frost-bite.

From Nebraska, H. H. Stoddard wrote us in 1910: "I write with some ardor on this fresh air biz for reasons I will proceed to set down. For fifteen years or more I read nothing on poultry. Lost the run of things entirely. Then read R. P. J. files through 1909. Learned more of importance, I can truthfully say, from your pen than from all my previous reading of poultry books and papers put together.

"My interest in the anti-tuberculosis crusade, and the wonderful vigor imparted by the open windows o' nights practice to well people, made me read carefully your statements. I determined to open two big doors to my poultry house. Now here is the important thing. The oldest residents (about fifty years is the limit since exclusive Pawnee occupation here in this part of Nebraska)

have never experienced so severe a winter. For six weeks the cold had no letup. For twelve mornings in succession, by a very strange uniformity, my thermometer said 5 degrees below, almost to a hair. Previous to that, and afterwards, it was every morning from zero to 18 degrees below in the whole six weeks' period. My house doors stood open on the east and the perches were not way back from the opening. House, a barn really, so wide, long and high that animal heat couldn't warm it to amount to anything.

"I expected frozen combs would compel me to stop the experiment. Had very large, freezable combs. None froze! Birds bright, active and healthy. Water left by mistake froze six inches in one night. Good output of winter eggs. I came to scoff and remained to pray. I am converted and reformed. Thought I understood fowls. For nearly fifty years I have preached ventilation. Am through."

Because we simply cited a last winter experience in moving three birds from a closed house to an open one in severe weather, our critic assumes that that was an exceptional case. Not so. For a dozen years we have been moving fowls from closed houses to open-front ones in winter and with 100 per cent success. Several years ago we were called to a bleak northern poultry plant in midwinter. The thermometer stood at from 35 to 50 degrees below zero all through our visit. We went to investigate a troublesome epidemic of roup and roupy colds. We found the fowls in closed and curtain-front (oiled muslin curtains which are as tight as boards) houses. We took those sick and ailing fowls and put them in the small 3x6 open-front colony chick coops used for fall flocks, not over six or eight birds to the coop; this for the sickest specimens that seemed to have the least chance. For the rest of the flock we threw the south fronts of the buildings almost wide open except for a wire screen. The birds in the big houses all recovered and within three weeks were beginning to get well established in laying. Of the very sick birds in the small open colony coops, out in the snow drifts on the hillside, all but three or four made a good recovery, without doping, and began laying while it was still cold enough to freeze the eggs in the coops unless collected several times daily. When we preach open-front houses we are not spinning theories, printing guesswork, or padding space. We have had a long and wide experience with open-front houses and many successful users of open-front houses all over this broad land will back us up.

The assumption, because we dressed a sick little girl warmly in wool when giving her open-air sleeping-room treatment, that we should put ulsters on the fowls in open houses is puerile nonsense. Fowls wear thick feather ulsters day and night and cannot lay them aside at will. In winter their feather coat is heavier than in summer. They have to wear their outdoor wraps in the

"Wingold" Buff Orpington pullet. First at International Show, Buffalo; first at Detroit. (No retouching whatever.) Bred and owned by F. A. Poertner, Berea, O.

house and their ulster collars (metaphorically) are always turned up to protect them from the wintry cold.

Put on your ulster and mittens and coon cap and go into a closed house that has no heat in it, aside from the animal heat from yourself and companions, and on a zero day you will find the air in that house has a deadly chill and is anything but comfortable. From there take your party into an open-front shed with a southern exposure and you will find it much more comfortable. Any red-blooded man used to roughing it can tell you that.

We believe that open-front houses are more sensible and sanitary for fowls than closed houses or curtain-front houses. Open-front houses are more comfortable for the fowls. "Colds" are not the result of cold pure air; they are caused by stale, foul, impure shut-in air.

In our experience fowls in open-front houses lay more eggs in winter; produce a better percentage of fertile eggs; the eggs hatch better; the chicks live better and the health and vigor of all flocks is at the maximum. That is reason enough for their use in spite of silly prejudice.

Editorial By Our Readers.

Editor American Poultry Journal:

I WISH to express my appreciation of your editorial on "Censoring Advertising," page 816 of the May issue. I believe it is well to go slow and easy in this matter and not draw the lines too tight; in fact, I believe that if the poultry journals would agitate this question in a general way in their editorials, showing why it would be to the advantage of the advertiser himself to be careful in his ads, that is all that would really be necessary. No matter where you look, even in the so-called highest forms of advertising, you will find claims designated by such words as "unsurpassed," which really means nothing else than "the best in the world," and "peerless" and "unequaled," which are, according to our present day standards, simply words which express the author's idea that his stuff is high-class. Absolute misstatement is a horse of a different color, but when one claims, for instance, that you simply must win out at Madison Square Garden and Boston and Chicago in order to be able to advertise "the best in the world," I believe such a stand is ridiculous. Believe me, gentlemen, that many more high-class birds have been sent out by breeders who never won at Madison Square or Boston than by most of the breeders that did win there. Therefore, these breeders who did send out the good birds to their trade are the ones who really did much more good to the poultry business in general than those that did win at the above mentioned shows.

Furthermore, any breeder who cannot back up his advertising by sending out

BREEDING STOCK—I will now offer at greatly reduced prices about half of my choicest breeders. Don't write, however, for prices on them by the hundreds, as we don't breed them that way. We aim for quality, not quantity, and will not have over 150 birds to offer. Let me know what you are interested in and I will be glad to write youfully.
The strain with over 25 years' careful selection back of them for eggs, and bred well enough up to the standard to win a share of the blue and to have a number of Madison Square Garden winners as customers. Circular free. Large 40-page catalog a dime. Deduct same from your first order.
J. W. PARKS BOX J ALTOONA, PENN., U. S. A.

the goods that really have those qualities which his customers are seeking and needing,—the life of such an advertiser as a poultry breeder will be short lived. It is of far greater importance that the customers be treated right than it is to see that the wording of an ad is just tame enough to suit the finicky taste of a purist. Sending out every bird subject to approval and refunding the full purchase price in every case where the bird is returned, sending out eggs for hatching with a guarantee of at least 50 per cent strong fertility and replacing such orders free of charge as do not come up to this guarantee—these are two of the great strides forward which have been made in the last few years by some breeders, and which should become a universal rule. Keep up the good work. Very truly yours,

W. D. Holterman, Fancier.

Fort Wayne, Ind.

Editor American Poultry Journal:

I NOTE that the American Poultry Association is to have an advertising censor committee. I also note that some poultry publications are taking exceptions to this act. It would seem in this day and age that no well-managed institution would take exceptions to any movement that would prove of such real value to those hundreds who each year make a start in the poultry venture. If there be one reason more than another why so many people make such glorious starts with poultry and end in a few months in conspicuous failures, it is because they have seen an attractive advertisement in one of the poultry papers, thought that that paper would not accept other than reliable advertising, and so spent the few remaining dollars for the stock so highly recommended in the advertisement.

When I started in the poultry business I purchased stock from a concern advertising in all poultry papers; one having a booklet published about their farm and distributed by a well-known publishing house, thought by more than a million readers to be wholly reliable, yet this same concern may be run to ground with very little watching as being the country's greatest band of highway robbers. They advertise to guarantee every chick or head of stock they sell to be just as described. They purchase hens as old as four years and scrape off the scales and sell as yearlings. These are purchased of farmers here and there, and they have written poultrymen, the reliability and integrity of whom they know nothing, asking if they had any stock or eggs to offer, that they (the great poultry concern) might fill all orders for stock as received. Yet we hear the poultry publishers crying not to cast any stones into the other fellow's backyard. It would be terrible to make a row about men who hand out such goods, for we might diminish their bankroll and cause a few well meaning people to make good in poultry, because they would then be able to go to the American Poultry Association officials and obtain a list of wholly reliable breeders.

Every publication that is worthy of the name should be willing to take this "honesty in advertising" stand, that all publications worth spending our hard-earned money for maintain. It is impossible for anyone to pick up a paper that does not contain one or two objectionable advertisements, but it should be the aim of every publisher asking people to subscribe for his paper to make it as clean and reliable as possible. Seemingly, poultry publications have been the last in the list to maintain such a standard. Advertisements are continually inserted, offering stock and supplies for sale, that should never be allowed to appear in print.

The day-old chick business has grown to be one of the greatest industries of the day. The sins that are perpetuated within the fuzz of day-olds is stupendous. Stock is being shipped each season wholly unfit for even an experienced man to deal with and make a profit with, to say nothing of a novice.

I purchased several hundred head of day-olds of a large concern, rated as reliable. Upon reaching the ranging age I found that this stock developed brown feathers, although I paid my money for "full-blooded Single Comb White Leghorns." Upon receipt of my letter of complaint the concern advised me that the stock must have been exchanged for poorer grade in transit, which, as any sane man knows, would be exceedingly improbable.

Another side of the advertising situation that the board of censors should look to is that of fake medicines and concoctions for poultry. One is a preparation offered to take the place of green food. While the makers may offer the letters of recommendation of several important men in poultry husbandry, I know from personal experience that the clause in their advertisment which says, "Your money back if not satisfied," is one of the boldest attempts (which succeeded all too well in causing people to spend their money for this stuff) in poultry supply advertising today. I purchased these pills and found them most unsatisfactory. I specified when I signed the order that if they were not what they were recommended to be that I would get my cash back. Nay, nay, Pauline! When I wrote them about the matter, asking that my cash be refunded, they told me no. They say cash refunded, and then the local agency offered to "buy back" the unused pills. Some square deal, eh?

The majority of the papers circulated through the mails contain advertisements that the publishers are willing to make good within a reasonable time any false or misrepresented article advertised. It is high time that the poultryman had this same privilege. We shall not find the poultry business, whether from the supply manufacturer's viewpoint or that of the breeder, highly successful until we reach a stage where the doubtful one and the square dealers are in separate pens. If I breed and offer for sale the best stock in the country, and the reader happens to purchase this season

Crusader III, a Boston Winner

Martin's Regals

Half Price Egg Sale

After June 1st the price of eggs from my prize matings (as they run) will be $2.50 per 15, $4.50 per 30, $6 per 45, $12 per 100. Dorcas Pens—$3 per 15, $5.50 per 30, $8 per 45, $16 per 100. Special Matings—$5 per 15, $9 per 30, $12 per 45. Utility Matings—$3.50 per 50, $6.50 per 100.

This is an excellent chance to become acquainted with America's finest White Wyandottes at small cost. All my winning pullets and some of my winning cockerels at the Boston Show, 1913, were June hatched.

Free—Send for catalog and Summer Sale List giving description of several hundred breeders I am offering for sale.

John S. Martin, Box 51, Port Dover, Can.

Jacobus Campine Eggs Half Price

To advance the interest in Campines and enable all to secure proper stock, I have decided to offer eggs on June 1st for balance of season from my noted strains of Golden and Silver Campines as follows: **Best Matings**, $7.50 for 15; $13.50 for 30; $21.00 for 50; $37.50 for 100. **Grand Matings**, $3.75 for 15; $7.00 for 30; $11.00 for 50; $21.00 for 100. For best results you should have my strain, as I have won a total of more first and second prizes at Madison Square Garden and Boston on Campines than all my competitors combined. At Madison Square Garden, December, 1913, 197 birds competing, I won four firsts, one second, two thirds, one fourth, two fifths and four specials.

M. R. JACOBUS, Box 3-J, RIDGEFIELD, N. J.

Harold Tompkins' Rhode Island Reds Both Combs

Leading winners at the world's largest shows for the past several years, including New York and Boston. Eggs from some of the world's best matings now half price. Some fancy breeding males and females on the market. Write always to

HAROLD TOMPKINS, CONCORD, MASS.

of the man next in the column to me and gets badly stung, he will use great care in accepting my offers the next year. In business one man cannot make up for another, but one man can tear down the integrity and reliability of a vast multitude. An honest poultryman, who is breeding the stock he represents to sell and who is afraid to have his advertising censored by the A. P. A., has no business in the poultry business, anyway. It would be a selling point to any concern to have its articles accepted and labeled by such a board, the members of which would be equipped both with knowledge and experience to judge the articles and stock offered.

We demand that honest men advertise honest wares in the paper we pay our cash for. Let the others start a sheet all their own and beat such suckers as will be fools enough to take it and read its pages. Earle W. Gage.

Ashville, N. Y.

———o———

Appointment of Harry H. Collier.

EXECUTIVE Commissioner Richard Seelye Jones, of the Washington Exposition, announces the appointment of Harry H. Collier as that state's commissioner of poultry for the Panama-Pacific Exposition. Mr. Collier has long been identified with the poultry industry of Washington. He was the commissioner of poultry for the state of Washington at the Lewis and Clark Fair in 1905, which was held at Portland, Ore. He was commissioner of poultry at the Alaska-Yukon fair that was held at Seattle, in 1909. He has held the position of superintendent of poultry for Washington State Fair for the last fifteen years. He is a special correspondent for the American Poultry Journal, Chicago, Pacific Poultryman, Seattle, and the Northwest Poultry Journal, Salem, Ore. Mr. Collier writes for many other poultry papers, among them being the Fanciers Monthly, San Jose, Cal., and he has charge of the Tacoma Ledger's poultry page that comes out each Monday morning.

Harry H. Collier was elected a member of the executive committee of the American Poultry Association in 1911 and attended the last three conventions, Denver, Nashville and Atlantic City. Mr. Collier was honored by President Reese V. Hicks with a place on the judges' license committee and was elected by the executive committee to revise the show rules of the American Poultry Association.

———o———

Last Call.

JUNE marks the month for the last call to swat the early fly. A month hence will find teeming millions of these filth carriers spreading disease everywhere to man and beast. Each fly fairly and forcibly swatted NOW means twelve million less to swat July 1st.

The fly lives and breeds in filth. He cannot breed or prolong his race without filth. Under ordinary filthy conditions, he can multiply his kind at an enormously rapid rate, from mature fly to mature fly covering a period of but a few days.

If you want to make a telling blow for your own comfort, for the health of your family and neighbors, for the doing away of one of the worst foes to hygienic conditions of living in summer, swat the early fly now and outdo the "seven at one stroke" story by virtually killing a million at one swat.

The New York Tribune gives the following table showing the rapid increase of the fly family with a common ancestor:

Swat the Early Fly!

Table Showing How Rapidly Flies Multiply.

	Flies.	Eggs.
June 1	One fly lays	120
June 10	60 flies lay	7,200
June 20	3,600 flies lay	432,000
June 30	216,000 flies lay	25,920,000
July 10	12,960,000 flies lay	1,555,200,000
July 20	777,600,000 flies lay	93,312,000,000
July 30	46,656,000,000 flies lay	5,598,720,000,000
Aug. 9	2,799,360,000,000 flies lay	335,923,200,000,000
Aug. 19	167,961,600,000,000 flies lay	20,155,392,000,000,000
Aug. 29	10,077,696,000,000,000 flies lay	1,209,323,520,000,000,000
Sept. 8	604,661,760,000,000,000 flies lay	72,559,411,200,000,000,000
Sept. 18	36,279,705,600,000,000,000 flies lay	4,353,564,672,000,000,000,000
Sept. 28	4,353,564,672,000,000,000,000 flies.

DR. WOODS' NOTES AND COMMENT.

Come to Chicago August 10th to 15th!

* * *

So the stork is to bring a Green-Robinson Poultry Weekly to Boston early in November. (Mr. Printer, be doggone careful how you spell that name.) Let's hope it will prove a lusty infant and find a warm welcome. We suggest that the first issue publish full length portraits of Editors Green and Robinson standing side by side.

* * *

Editor Standish of The Poultry Index says in his April number that we told him during Boston Show a story of Mrs. Woods "sitting up nights at home to keep the cats from freezing" during that severe January cold snap. That has us guessing as to just what brand of "ink" Mr. Standish and his printers use. We never mentioned "cats"; we don't keep "cats," and Mrs. Woods has no earthly use for 'em. What we said was that she had to sit up nights to keep the "water pipes from freezing." Sounds a lot like "cats," don't it? But then, maybe, friend Lemuel had just been visiting the cat show department at Boston before we talked with him and that should excuse almost anything. We haven't entered the doors of the cat show for half a dozen years, but the memory of the last visit still lingers with us. "Sufferin' cats," Lemuel, don't get the water pipes mixed again!

* * *

And now, having disposed of the "kitty," we want to thank Editor Lemuel W. Standish for the way he handled open-air poultry house matters in the April Index. While the compliments are appreciated the boost for open-air housing of poultry and open-air living is even more welcome and pleasing. We are strong for open-air living, open-air sleeping porches and open-air poultry houses and we appreciate it when our friends of the poultry press give the good work a helpful boost. Fresh air, open air, is good, but it is too cheap and generally costs nothing—that is one reason why folks are slow to make use of it. If fresh air cost a dollar a pound, what a mad scramble there would be to get breathing space. Some day somebody will get a mortgage on all the fresh air and try to tax us for it. (We pay taxes for pretty much everything else.) Better get the fresh-air habit now, before the cost goes up.

* * *

We get a great many inquiries about desirable small farms in Eastern Massachusetts. As a matter of fact there are mighty few such farms offered for sale at moderate prices that are getatable and worth while. The Sunday papers are filled to overflowing with ads. of low-cost farms, but on investigation these do not pan out well. We spent a long time and a lot of money looking about before we located, and we found that desirable places were scarce indeed. We do not know of any good farm place of from 15 to 30 acres, within an hour and a quarter's ride of Boston, that can be bought for less than $4,500 and upwards. There are plenty of farms advertised to sell for from $1,800 to $3,000, but when you look them up there is either something decidedly undesirable about the place, or it is very much out of repair, or you find that the ad.

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Bargain Sale for 1914

Imperial "Ringlet" Exhibition Pen, winning First Prize and Sweepstakes Cup at Madison Square Garden, New York, 1913-1914, and Ckl. heading Second Prize Pen.

Type never told a story of greater values and more sweeping price reductions than in my Special Sale List which is now ready for mailing. This is an opportunity to buy the finest quality Barred Rocks ever offered in America at Special Bargain Prices.

This Is America's Leading Bargain Sale

It is unrivaled in high quality and low prices—This establishment is the largest devoted entirely to the breeding of High Quality Barred Rock in All America. There are more First Prize Madison Square Garden, New York, winners here than on all other farms combined. You can now secure Madison Square Garden winners and sons, brothers, sisters and daughters of New York winners, and birds of this richest New York first prize winning blood at the decided bargain prices. Birds bought now at the prices in my Special Sale List will pay you splendid dividends.

In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios, and pens that I have ever offered and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world.

See ad on back cover page for the wonderful record of my Imperial "Ringlets" at last winter's Madison Square Garden 1913-1914 show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.

It Will Be To Your Interest to have this Special Sale List and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. Whatever may be your wants in Barred Plymouth Rocks you will find it in my Special Sale List at Bargain Figures: The List will be mailed promptly upon request.

Elegant 70-page catalogue upon application.

EGGS from the world's finest exhibition matings $10 per setting; four settings $35; 100 eggs $60—One-half these prices after June 10th.

* * *

Dr. Raymond Pearl, of the Maine Experiment Station, says: "It used to be believed that birds could not be raised without a dust bath to kill lice. One of these has not been used here in many years. In the first place, the hens should be free from lice when put into the pen. Secondly, the dust bath does not prevent the lice, and, thirdly, it makes the place dusty and fills the lungs of the birds. In a pen, only a small percentage of the birds will use the dust bath, anyway. They should be put in free from lice and the houses kept reasonably clean, the pullets being kept from the old hens. Under these conditions there will be no ill effects from lice until spring. Then a small piece of mercurial ointment put on each bird will do effectual work in killing lice, and they will come back but slowly. On old, lousy birds, two or three applications should be made. We used to use a lice powder, but this was, on the whole, more troublesome to apply, with no better results. We have yet to see any reasons for the putting back of the dust bath when there is plenty of litter on the floor."

* * *

All of the above quoted paragraph is very good as far as it goes. Comparatively few of the poultry plants we visit provide any dust bath, other than such "dusting" places as the fowls can find in the runs and the earth on the floor. The great trouble with the dust bath is that it is misnamed. From the name, a good many poultry keepers have come to believe that a "dust bath" should be filled with dry dust, the drier the better. A fowl will use a dry dust bath when she can't get anything more to her liking, and she will wallow in it until the place is filled with dust almost to the point of suffocation. Such dust-filled air is not desirable for breathing purposes. But biddy will kick up great clouds of dust scratching in dry litter and appear none the worse for it.

* * *

Substitute the earth bath for the old-fashioned "dust bath," and you will have conditions more to the bird's liking. Observe your birds carefully and you will note that, when given a chance, chicks and fowls of all ages will eagerly wallow in fine, slightly-moist friable earth. In freshly-turned sod, under berry bushes, beside an old stump, or near orchard trees, where the earth is soft and friable and just a bit moist, there the chick, even under a week old, the adult fowl and all ages between, eagerly seek their earth bath and seem to take great enjoyment in it. They will wallow in an earth bath whether they are lousy or not and will shoot the moist earth through their plumage with evident pleasure. Out in our woods the pheasants and grouse do the same thing and we frequently come upon a wallow close by an old and rotting stump. We have never yet found a healthy chick or fowl that failed to use and enjoy an earth bath of the right sort and we believe all should be provided with the opportunity to use one. We don't know that it has any particular efficacy in ridding a bird of lice, but we do know that the birds like and enjoy an earth bath and that is reason enough for having one. Our brooder chicks take to the loose earth of an up-turned sod like school boys to a swimmin' hole. We believe in chick comfort and it surely is one more factor in chick comfort.

* * *

As to the use of lice powders, we like to use a good powder for dusting broody hens. Ointments and grease are not usually as desirable. We find flowers of sulphur good and best of all is fresh-ground Persian pellitory (pyrethrum). Almost any grease applied about the face and rubbed into the skin and plumage about the vent will get rid of lice. A 5 per cent naphthalene ointment is good. Mercurial ointment mixed with an equal part of vaseline and a piece the size of a pea rubbed into the skin below and around the vent is very effective in getting rid of body lice. Do not use the mercurial ointment (common blue ointment and vaseline, equal parts) too freely, and do not use it about the face and eyes. Five per cent croton oil in castor oil is also good to get rid of lice. A very small quantity may be rubbed in around and below the vent and at the edge of the feathers on head. Do not get it into the eyes. Both the mercurial ointment and croton oil are poisonous and should be used with caution.

Woodcrest Partridge Wyandottes

MADISON SQUARE GARDEN, NEW YORK CHAMPION

White Plymouth Rocks

Win all Honors at the National Show, Held at Washington, D. C., December, 1913

Their record is unbeatable, like their superior quality. At this great National Exhibit they won Cock 1-2, Hen 1-2, Cockerel 1-2, Pullet 1-2, Pen 1 and all Specials. **At Williamsport** this season they again made their second great record, and at Cleveland, Ohio, Chicago, Ill., Boston, Mass., Philadelphia, Pa., they have proven their quality and won highest awards and honors over all, including six Championship Specials for Best Bird at these great shows.

Remember This Champion Line made its best records at America's Greatest Show, **Madison Square Garden, New York. They are now better than ever.** We have a great line of stock to select and fill orders with. They have the best of breeding quality and will give absolute satisfaction. Write for my **Special Sales List of Stock.**

Eggs for Hatching from selected matings, made on quality to produce quality. My circular and full particulars for the asking. Write me.

WEBSTER FARM, Box A, GIRARD, PENN.

LICHTENWALTER'S QUALITY

Buff Plymouth Rocks

For years they have won at the prominent shows, East and West, more prizes than any other line. They have the quality to win and to breed winners. Let me know your wants—I can please you.

Eggs for Hatching: For this year I have made but few matings. They are the best I have ever had, and from which I will sell hatching eggs without reserve. Circular and Mating List for the asking.

E. A. LICHTENWALTER, Box A, GIRARD, PENN.

At this time of year lice and mites begin to prove very troublesome and they multiply rapidly. There are several good liquid lice killers that are excellent for getting rid of mites. Mites are poultry bed bugs. They live in cracks and crannies of the woodwork of the poultry house, roosts and droppings boards. Usually they hide in their breeding places by day and sally out to suck the blood of the birds at night. They are carriers of disease and they can and will kill both sitting hens and chicks. A cheap and effective spray solution for killing mites can be made at a cost of not over 15 cents a gallon. Mix one pound of crude naphthalene flakes with one gallon of low-grade kerosene. Stir until most of the flakes are dissolved. Use the clear liquid to spray woodwork and to paint on roosts and to kill mites. It is a good, cheap liquid killer for lice and mites and has been in successful use twenty years.

* * *

When young chickens appear ill, lose interest in their food and develop symptoms of dumpishness, lack of interest in life, abnormal walk or gait, cramps, leg weakness, puffed crop, and even fits, it is a good plan to do these things: First, stop feeding. Second, keep the chick warm and comfortable and out of chilling winds. Third, take the weaklings away from their stronger mates, so that they will not be trampled on and otherwise abused. After a brief rest, begin feeding a very little warm sweet milk the first day. Follow this, if chick has looseness of bowels, with small feedings of scalded sweet milk, thickened with well-boiled white bread flour and seasoned with a bit of ginger and grafted nutmeg. When improvement is noted, and not until after the second day of the milk diet, allow a little good "steam-cooked" rolled oats (just as they come from the cereal package), rubbed up with hard boiled egg. Then add bread crumbs to the egg and oatmeal mixture and gradually return to the regular ration. Scraped raw potato is also good for them. Do not feed too often, three or four times daily is ample. Use only good, sweet, sound foodstuffs. Grind your own chick food from the best grain you can buy. A $4 grinding mill will more than pay for itself even where you have only a small flock. These simple rules will help to bring many unpromising chicks up to marketable broiler size and turn what looked, at first, like loss into profit. Don't attempt to run broods altogether by thermometer temperatures, and don't be afraid to give them outdoor air and exercise. Keeping the chicks comfortable is the secret of success.

* * *

Don't let rats nest under your chick coops. Turn up the coops often and get rid of the rodents. A full-grown rat will make way with an entire brood of weaned chicks in a single night if given an opportunity. One of our neighbors, who was on the war path for feline chicken thieves and shooting up all the cats that came on his place, was chagrined to find that the cats were not to blame after all. He missed 50 eight-weeks' old chicks in one day and naturally was exceeding wroth and blamed all the cats in sight or out of it. Chancing to move a small colony coop, which stood near the one from which the chicks disappeared, he found under it the fifty chicks with their throats bitten and partly eaten, and close by, a full-grown rat with a nest full of young. Since then, with terrier and club, he has been ratting under every coop and building on the place. We have never had any luck fighting rats with poisons, rat-corn and serums. A good wire rat trap, well-smoked after each catch, has done good service. A 16-quart, galvanized iron pail, half-full of water, standing beside a box that reaches almost to the top of the pail, has proved a never-failing trap, and always yields up one or two drowned rats a day when the rodents are plenty. An Airdale terrier does good work, and for the rest, a small calibre rifle and a good, solid wooden billy (a thirty-inch length of broom handle) do the trick in getting rid of rats. We not only have the common house rat to contend with, but husky water and woods rats as well. After a good round-up they leave the premises for a time, and there is a brief period of freedom from the pests, then comes another invasion and more work to be done.

* * *

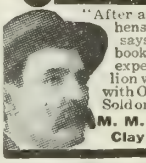
Last year, Thos. F. Rigg called attention to the fact that blue jays were seriously annoying his chickens and even killing some of them. Until this season we have had little trouble with blue jays. Early in May, however,

FERRIS Leghorns

30% Less Than Actual Value

We raised 10,000 Improved White Leghorns this spring and you can get your pick of thousands of February and March hatched cockerels and pullets at 30 per cent less than regular prices. These birds show splendid development, and they have the low, well spread tails, good heads, with white earlobes and smooth, evenly serrated combs; typical shape in all sections, with long backs and full breasts, and snow white plumage that you must have in order to win. We have been breeding winners for the largest shows for many years. Ferris Leghorns are trap-nested. We have been breeding them for egg production for more than 12 years. We ship on approval and insure all birds for 30 days. If they get out of condition we stand the loss. Utility cockerels from $2.00 up, pullets and hens from $1.75 up. We have a number of very choice breeding birds to spare that we have used in our best matings. Write us for further particulars; we will be glad to tell you just what we have. The summer prices make it worth your while to buy now even if you do not need the stock until winter. Males that will then cost you $10.00 cost only $7.00 now; the $15.00 exhibition birds only $10.50.

We can ship eggs and chicks at once on receipt of order



There is still time to hatch chicks if you can give them good care. Chicks, $5.00 for 25; $16.00 per 100; $144 per 1,000 in June—$4.00 for 25; $12.00 per 100; $108 per 1,000 after July 1st. Eggs, $1.35 a setting; $6.00 per 100; $57 per 1,000 in June—$1.20 a setting; $5.00 per 100; $47.50 per 1,000 in July. Safe arrival of chicks and fertility of eggs guaranteed.

Our Catalog Is Free

It contains a lot of valuable information and will tell you all about White Leghorns and why they are best. Just write a postal today and let us send it and quote prices. Breed Ferris Leghorns and you will have eggs all next winter and can win wherever you want to exhibit. Take advantage of this summer sale and it will cost you very little to get a splendid start.

HERE'S why the owner of the biggest barn in Minnesota chose Neponset Paroid Roofing:

"Slowly made" roofings are the only kind that wear out slowly. You *can't* make good roofing quickly. Rush the manufacture and you get "patchy," uncertain products. Omit tests and inspections and you get roofing products quick to "run" in summer—quick to become brittle in winter—quick to start a leak—quick to wear out altogether.

Get "Neponset Roofings"—the "slowly made" kind. Nothing skipped. Nothing skimped. Every dollar's cost gives a dollar's worth of durability. Any one can easily lay them. They are the finest kind of insurance against repair bills—fire—and all roofing troubles.

Sold by dealers everywhere. Write for name of nearest dealer

Surely send for our Roof Book—Free

NEPONSET
PAROID ROOFING

Other Neponset Roofings are—Neponset Shingles for residences; Neponset Proslate, the colored roofing.

BIRD & SON (Est. 1795)
549 Neponset St. East Walpole, Mass.
New York Chicago Washington San Francisco
Canadian Office and Plant: Hamilton, Ont.

Also makers of Neponset Wall Board, used in place of laths and plaster, and Neponset Waterproof and Building Paper

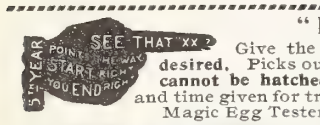
they began to make a nuisance of themselves and attacked a little brood of weaned chicks under the apple trees. The birds were frightened off before they had an opportunity to do much mischief, but they showed a disposition to be nasty to the chicks, and one chick was found with back and wings severely picked and bleeding.

* * *

There is nothing like a mess of fresh fish to appeal to the appetites of growing chicks. Fresh fish of any edible sort, from salt or fresh water, well scalded, makes a very desirable growing food, and may be fed as freely as one good meal daily, when obtainable. The little fellows certainly do clean them up. Some chicken growers in Plymouth county took advantage and made good use of the herring run while it lasted this spring. The chicks eat them up, meat, bones, scales and all, and cry for more.

* * *

A. P. A. voters have declared, by a vote of 554 to 31, that Rhode Island shall be retained as a part of the name of Rhode Island Reds. That is as it should be. Rhode Island Reds originated in Rhode Island, in fact, it can be said that they developed naturally from Rhode Island farm flocks, and some mighty fine specimens of the breed are to be found in our littlest state today. If only as a matter of sentiment, the name of the variety should continue as it is. The good American Plymouth Rocks haven't half as valid a title to their name, in fact, are not the breed that first bore the name in New England, and they certainly have very little association with the historic boulder in old Plymouth town. But we wouldn't change the name of the Plymouth Rocks for all that. We like Rhode Island Reds, Plymouth Rocks and Wyandottes, we like the names of these breeds, and would not care to see them changed. Of course, we nickname them; Americans will always do that with anything they like, but though we may refer to the breeds as Reds, Rocks and 'Dottes, we should protest loudly against any change in the standard names of these admirable fowl.



* * *

We are always amused by the elaborate contraptions that are invented and recommended for catching, herding and handling chicks and fowls. If one built or bought all the equipment said to be required, he sure would have one grand accumulation of junk. The pole and wire leg-hook is a convenience for catching birds, but if carelessly used may break or injure legs. Where the fowls are kept as tame as they should be it isn't much of a stunt to catch any bird desired. It only takes a little time to get the knack of it. Make no unconsidered, hasty or violent movements; don't rampage about and stir up the whole flock and have the air filled with fowls, feathers and dust. Quietly herd the flock into one corner of the pen without getting them excited and frightened. If a number of birds are to be caught, two light wire net frames can be used to pen the flock in the corner; place them quietly; don't slam them down or wave your arms about. When the flock is penned, you can sort them over at your ease. If only one bird is to be caught, make up your mind which one before you begin, and keep her in sight without staring at her until she is scared and nervous. Take things easy, make a favorable opportunity, and then size up the bird's next move; if you have a good eye, and a quick, steady hand, you can have her caught by the legs before she has time to get scared. It is merely a combination of good judgment, skill and prompt action. If you get excited the birds will.

* * *

Chickens are not difficult to herd and drive if you go about it right. Round them up by making a wide circle around them, get them headed where you want them to go, keep the flock together, and move up on them slowly, taking care not to get them fussed up, and they will go where you want them to. Last summer, with a boy to help, we drove a flock of fifty half-grown chicks across an unfenced five-acre field and housed them in a new home without any trouble. It takes a bit of patience and common sense and it is another case where undue haste makes waste.

If you have a flock of small chickens of any age that you want to drive into the brooder or brood coop, don't make a fuss and row about it. Simply stand at the far end of the coop and imitate the cry of a cock when he sees a hawk, or as near it as you can get. You'll get results at once, and the chicks will hike for the coop. If the distance is considerable, some may hunt other cover and lie close, but a low-voiced repetition of the call will usually start them home in a hurry. Don't be too strenuous about it, try to do it as does the cock or the

(Sectional Construction)

The Hall Mammoth Incubator hatches stronger chicks and more of them. Everywhere successful poultrymen are giving it special credit for their profits and progress.

Its unequalled results, the success of its users, and the high percentage of re-orders are responsible for its sales being larger than any other mammoth type.

The largest possible hatches of vigorous, healthy chicks are the rule. Some shrewd poultrymen advertise "Hall Hatched Chicks" because it is recognized that they grow into money quickest with the least trouble and expense.

The Hall is the original — it was a success in 1876. It has always kept ahead in achievement. Every improvement of practical value was originated by our engineers and poultry specialists.

About what size can you use? Do you want our useful literature? Write a letter giving details. Ask us to send our SERVICE SPECIALIST to help you get the right equipment and results— no charge — he may be in your section now, or later.

THE HALL MAMMOTH INCUBATOR CO.
132 Southern Avenue **Little Falls, N. Y.**

mother hen and you'll be surprised to see how easily you house your chicks. We work it on every brood and it always gets them in under cover when we want them there. Don't overdo it, just for fun, or it will be like the old story of the boy who cried, "Wolf, wolf," too often. There are a lot of other practical stunts that can be worked if you will take the time to study poultry language, the meaning of it, and then imitate the calls.

* * *

Fred W. C. Almy, of Tiverton-4-Corners, R. I., in a letter to the publishers, says:

"May issue, containing Dr. Woods' write-up, received, and I am much pleased. I also appreciate your promptness in getting your paper out. There is one point, however, in Dr. Woods' article that I would like corrected. He quotes me, from a report of a speech I made recently before the Farmers' Institute in Providence, as saying that last year I cleared $2,000 over family and all expenses. This is a big mistake, not on Dr. Woods' part, but of the paper that reported my speech. What I did say (in reply to a direct question) was that I had cleared $2,000 per year above all expenses on utility fowls alone. This was years back, before I got into the fancy so much. While I did not and will not say just what I am making now, I will say that in the month of March alone, this year, I cleared well over half of that amount. Will you kindly make that correction?"

We are very glad to make the correction and to have such assurance from Mr. Almy, personally, that he is doing so well. We know him too well to believe that he would in any way overstate his profits. While he does not state just how much he is making per year now, and evidently has no intention of so doing, it will interest our readers to learn, from his statement above, that Mr. Almy finds that a well-combined utility and fancy poultry business pays such a comfortable return for good management. Evidently there is more satisfaction in combining beauty and utility in poultry, as a life work, than in being Secretary of State and having to do Chautauqua circuits in order to get pin-money to buy grape juice.

* * *

Our benevolent Uncle Sam has discovered another way to lower the high cost of living. We are advised that half a pound of cheese costing 9 cents has a food value equal to 30 cents worth of beefsteak, or 40 cents worth of eggs, or 18 cents worth of milk. So, of course, we ought to learn to live on cheese and save money, no matter how it may affect our digestions and dispositions. The chemists and food specialists prove to us that the food value is there in calories, so why pamper the appetite when you can eat cheese, save money and die early? Some of us may not want to eat like mice and live a ratty life, but don't try to blame our benevolent government. Hasn't it said "cheese it" to the high cost of living and may we not live cheaper hereafter so that we will have more money wherewith to pay our ever-increasing taxes? It is said by statisticians that in 1893 about 85 per cent of the people were poor and that in 1913 about 96 per cent of the people were poor. Of course, from the viewpoint of the wealthy minority, that may mean progress. Still there has been quite some smoke in Colorado recently, and any man "with his ear to the ground" might hear a mighty rumbling of discontent with present conditions. "Cheese it," forsooth, what do you suppose would happen if the people took Uncle Sam seriously and began to create a greater demand for cheese by giving it a bigger place in the diet; would the price stay down? It would not! For years we've all been befoozled with reform movements that don't reform and investigations that only make bad matters worse, we have had remedies galore, but the cost of living has kept right on climbing. What are you going to do when about 4 per cent of the people have a corner on the

wealth of the country? Wonder if the A. P. A. Bulletin would consider this "worthy of a thought?"

* * *

On our trip through Ohio, Southern Indiana, Illinois and Missouri this spring, we were rather surprised to find so much corn unhusked still standing in the shock on so many farms. On some farms it had just been husked and was heaped in big golden piles, while the stover was being burned in big bonfires preparatory to plowing the fields. On other farms the stover was scattered in the pastures and fields for feeding the cattle. We examined some of this corn and a good deal of it was spoiled, presumably from the long exposure to winter storms in the moulding shocks. We saw acres and acres of this corn throughout our trip. It surely looks like wanton waste of good food and enormous loss. What is the reason? Why isn't the corn cured and cribbed? Why, with so much corn going to waste, was good corn scarce and high in price in the East all through last winter and still high this spring? Some of this field-spoiled corn is now finding its way into our Eastern markets, and it is not fit for cattle or poultry food. Why was it not saved when it was worth saving? Maybe this is "worthy of a thought."

* * *

Good corn is good food for poultry. Spoiled and diseased corn is poisonous. We always get good results with good corn and have never had any ill effects from feeding it heavily. We have seen many cases of the evil effects of feeding spoiled corn. It is at this season that a great deal of spoiled corn goes on sale at the feed dealers. Don't take any chances. Insist on having good corn and don't pay out your money for any other kind. In the Middle-West we saw a good deal of corn that was affected with green-heart, a parasitic disease of the corn germ that makes the corn poisonous and causes pellagra. We also saw a good deal of corn affected with smut (corn ergot) and a number of ailing fowls that appeared to be victims of corn-ergot poisoning. Corn-ergot directly attacks the reproductive organs. In the male fowl it causes first excitement, then congestion and impotence and death of tissue from prolonged arterial contraction in the capillary blood-vessels. In cases of slow poisoning inflamed and grangrenous testicles have been noted. In the females it causes congestion and abnormal functioning of the ovaries and oviduct. The hens lay soft-shelled eggs and eggs without shells. There are hemorrhages from the veins of ovaries, oviduct, lungs, bowels, or in any part of body. The ovaries show evidence of congestion, degeneration (the "partly cooked" appearance noted in some post mortems where there has been bacterial infection) and even gangrene. The oviduct loses its tone and is easily ruptured. There is often peritonitis with a great deal of fluid and this frequently is purulent. The poisoning with corn-smut so affects the reproductive organs that they become easily susceptible to bacterial infection. There is grave and great danger in corn affected with the smut disease. The corn-smut is most active when ripe and fresh, but (while much of it is rendered inert by age and exposure to frost) there is always plenty of it that is dangerously active as a poison at any time. These two different diseases of corn are what make the use of cheap or damaged corn dangerous. Good corn is safe. Feed only good, sound, wholesome corn.

* * *

Lately we have been much interested in some tests in cleaning grains. The best grain obtainable in the market was put through a cleaning machine and the amount of dust, dirt and filth removed from it was astonishing. That this dirt from cleaned grain contains much poisonous material and dangerous micro-organisms cannot well be disputed. It would pay poultry keepers to insist that their feed dealers and millers supply cleaned grain. A hand or power cleaning outfit does not cost a great deal. Uncle Sam ought to insist on clean and pure feedstuffs for farm animals and poultry. Cleaner and more wholesome grain foods would help to put a stop to diseases of horses, cattle, swine, poultry and pigeons. We should hear less about "blind staggers," abortion, diarrhoeas and cholera, and mysterious epidemics among poultry and pigeons if there was a good, wholesome clean-up of our stock feeds. We believe that this subject, too, is "worthy of a thought."

———o———

Editor American Poultry Journal:

Dear Sir:—A number of our prominent poultry journals have recently been publishing lengthy articles concerning

Demgar's S. C. White Orpingtons

Winners at New York State Fair, etc.

What's a CAPON, and Why?

George Beuoy's New CAPON book explains. Tells all you want to know about capons. Sixty pages, 40 halftone pictures from life. Shows each step in the operation in detail. Full and complete easy to use directions. Copyrighted new and revised second edition. One copy for a short time only prepaid for

Automatic Remover. (Patented. No extra charge on that account.)

A DIME—TEN Cents. If you haven't got a dime, send a Two Cent Stamp and get the book anyway. The regular price is fifty cents.

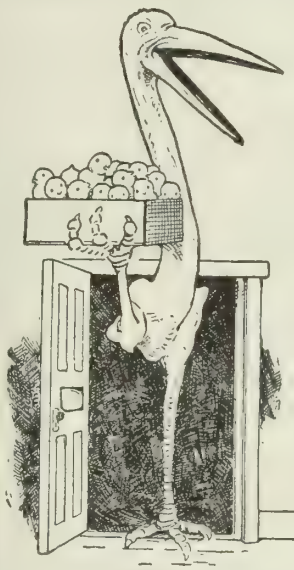
$3.50 for a set of Capon Tools exactly like I use myself. The Automatic Safe Set No. 10 and the book mentioned above free if your order is received at once. If not satisfactory return and I will refund. If you prefer I will send them C. O. D. parcel post and you can just pay the mail man for them.

GEORGE BEUOY, R. F. D. No. 7 CEDAR VALE, KANSAS

the advisability of placing the name of the exhibitor on the coops at our shows, prior to the judging, and it has, no doubt, set a great many of our show managers to thinking and considering the subject. These articles, as far as I have been able to learn, have been contributed by some judge or editor, and deal with the subject as being a very desirable feature to be adopted by all show managements. Theoretically, I agree that the custom would be very desirable in a great many respects, but I am going to recite for your approval, or disapproval, one or two phases of the plan, which I think have been overlooked in the articles brought to my attention. The authors of these articles compare our poultry shows with the horse shows, the cattle shows and the dog shows; now that is where the whole plan is at fault, in my mind. The judging at all the above-mentioned shows is done in the open, so to speak; the animal to be judged is led out before the audience and the points of excellence or disqualifications pointed out, and with men looking on as well posted and as capable of judging as he himself, a judge would indeed have to be "some crooked," and have some nerve to slip one over under such conditions. If poultry could be judged in the open, as these other animals are, an entirely different light would be thrown on the proposition. I should like to see poultry judged before an audience, but would it be practical. Such a system would necessitate the employment of at least twice the number of judges, and thus add greatly to the expense, to say nothing about the dissatisfaction of the exhibitors, because of the delay in getting the awards placed.

There is one way to treat this whole subject, provided that the public is clamoring for any decided change, that is, to use the explanatory score card system on every bird in the show, and we all know that such a system, while being without doubt the most equitable, is altogether too slow to be adopted by any management except at the very small shows. Personally, I do not think there is any urgent need of starting a great reform movement in regard to the judging at our poultry shows. The judges who have been, or who have appeared to be crooked in the past, are pretty well known, and no show management would for one minute consider any judge who had failed to give perfect satisfaction at the various shows where he had judged. I do think it would be very pleasing to the patrons and to a large majority of the exhibitors, to have the name of the exhibitor placed on the coops. Of course the show management would not welcome such a system, as it would incur a great amount of extra work and would deprive the management of one of its principal sources of revenue, namely, the sale of the catalogue. We all agree that our greatest asset as a poultry club, staging a poultry show, is to obtain and hold the approval and moral and financial support of the people in our vicinity, and this can only be accomplished by running our shows absolutely on the square, and employing only such men as judges who are well-known to be fearless and honest, and eliminate every semblance of unfairness. In conclusion, I ask, will the people in general who attend these poultry shows feel that they are run and judged on the square if they know that the judge has, behind closed doors, placed the awards, knowing the owner of each bird, or would they feel that a pretty raw deal had been handed to them?

H. C. Lapham, President.



Springfield, Mass.

SOMETHING DOING IN REDS.

THE Red breeders from Maine to California and from Northern Canada to the Gulf should keep their eyes on the Great Chicago Show for 1914. There will be the greatest list of cash specials offered at this exhibition that was ever listed at any show in America. Mr. A. G. Studier, Editor of the Rhode Island Red Journal at Waverly, Iowa, is busy now working up a $1,000 cash list. This will be offered on the two varieties of Reds and prizes run down to eighth or tenth places, so that even an eighth prize bird will win back double its entry fee. Mr. Aaron Fell of Perrysville, Pa., Secretary of the Red Breeders' Club of the World, will offer some $200 in cash, besides the club cup and ribbons; and the Association intends to offer some $300 on each variety. In fact, the grand total of cash specials that will be offered on Reds—Single and Rose Combs—at the next Chicago Show will total close to the $2,000 mark.

Now, let every Red Breeder in America get in touch with Mr. Studier or Mr. Fell at once. They will be pleased to give you full particulars in regard to these specials. Don't delay. You are interested in your breed and every dollar that is offered will be paid back to you at Chicago, December 11-16, 1914. In writing to either of the parties named, don't fail to give a list of other Rhode Island Red breeders in your immediate vicinity, and be sure to send your name and address so that you may be properly registered for premium list for the Great Coliseum Show. For premium list address

EVERYBODY COME TO CHICAGO.

AFTER a hard-fought battle, Chicago finally won the next annual convention of the American Poultry Association, and is now working hard making preparations to entertain the members of the American Poultry Association next August. It is desired to make this convention the largest and most enthusiastic one ever held in the history of the A. P. A., and the Chicago Poultry Society and the Chicago Association of Commerce have prepared a pleasure program that should interest and entertain all the members and their wives. Yes, the ladies should also come for they will be royally entertained by the local members' wives of the A. P. A.

A. C. Hawkins, Lancaster, Mass., newly elected member of the Executive Board of the American Poultry Association.

Arthur A. Peters, Denver, Colo, re-elected Second Vice-President of the American Poultry Association for 1914-15.

Now, boys, get ready to lay your plans to go to Chicago next August and and also help to show the world that our billion-dollar poultry industry is really what we say it is—the largest live stock industry in the world.

The following is the proposed program, subject, however, to some slight changes as future exigencies may demand:

Earl Hemenway, South Haven, Mich., re-elected a member of the Executive Board of the American Poultry Association for another three years.

Proposed Program.

Thirty-ninth annual meeting of the American Poultry Association, Chicago, Ill, August 8 to 15, 1914.

Headquarters, Hotel Sherman, Chicago, Ill.

All meetings of the association will

be held in the Hotel Sherman, and will be open not only to the members of the American Poultry Association, but to the public generally.

Saturday, August 8th, 9:00 A. M.

Meeting of the Executive Board, in the rooms of the Hotel Sherman. Sessions of the Executive Board will be held afternoon and evening.

Sunday, August 9, 1914.

Ladies entertained at Art Institute.

Monday, August 10, 1914.

Meetings of the Executive Board will be held morning, afternoon and evening.

11:00 a. m.—Trip to U. S. Yards.

3:00 p. m.—Ball game, Brooklyn and Chicago Feds.

8:00 p. m.—Reception, Hotel Sherman.

Tuesday, August 11, 1914, 9:00 A. M.

Thirty-ninth annual meeting called to order by the President.

Address of welcome by Governor Dunne.

Address of welcome by Mayor Harrison.

Address of welcome by President Association of Commerce.

Response by E. B. Thompson, President of the American Poultry Association.

Roll call of members by states.

Approval of minutes of last meeting.

Report of Election Commissioner.

Election of Board of Review.

Appointment of Committee on Credentials. (All credentials must be in the hands of the Secretary before opening roll call.)

Report of Executive Board on applications for membership, and charters granted to branches; annual report and recommendations. (All reports open for discussion as soon as made, and motions to carry their recommendations into effect.)

1:30 p. m.—Report of Board of Review, under suspension rules.

Report of Committee on Credentials.

Branch reports. (All reports must be in writing, signed by the Branch President and Secretary of the association before reports from each state are called for. No verbal reports or comments will be allowed.)

Report of Committee on Bureau of Lectures; W. Theo. Wittman, Chairman.

Report of Committee on Education and Experimentation; Prof. James E. Rice, Chairman.

Report of Committee on Plymouth Rock Breed Standard; Arthur C. Smith, Chairman.

Adjournment.

7:30 p. m.—Poultry Institute in Convention Hall.

Moving pictures by L. A. Stahmer, artist, American Poultry Journal, and D. E. Hale, editor, Successful Poultry Journal.

Lecture by A. G. Phillips.

Lecture by Prof. Halpin.

8:30 p. m.—Reception for visiting ladies by ladies of Chicago Poultry Society, in ladies' parlor, Hotel Sherman.

8:30 p. m.—Stag smoker for visiting men by men of Chicago Poultry Society, in convention hall, Hotel Sherman.

Wednesday, August 12, 1914.

9:00 a. m.—Business.

10:00 a. m.—Ladies meet at Hotel Sherman and proceed to Marshall Field & Co.'s store, where they will be entertained at luncheon at noon.

1:30 p. m.—Business.

2:00 p. m.—Auto ride to Jackson park and Field Columbian museum.

8:00 p. m.—A free boat ride on S. S. Roosevelt to see panoramic view of Chicago by night from the lake.

8:00 p. m.—Poultry Institute, exboard room.

R. C. Lawry.

W. A. Lippincott.

Thursday, August 13, 1914.

9:00 a. m.—Business.

1:30 p. m.—Business.

8:00 p. m.—Organized trip to White City or Riverview pleasure parks.

Friday, August 14, 1914.

9:00 a. m.—Business.

1:30 p. m.—Business.

In addition many other pleasure features will be offered to visiting guests. Boat trips to Lincoln park zoo, free bathing at Lincoln park and other beaches, and free admission tickets will be furnished to many other places of amusement.

Hotel Waste and Commercial Beef Scrap.

Q. Are such meat scraps, cooked and perhaps seasoned, as come from hotels and restaurants good for fowls and chickens? Will they serve the same purpose as raw bone meal and beef scraps so extensively advocated in poultry journals? F. G. H.

Saunemin, Ill.

A. Some poultry plants and piggeries use such waste. It should be fresh gathered often and not allowed to spoil. For poultry it will be generally necessary to sort such waste, as usually there is too much salted and fat meat in it. A good way to prepare waste meat of this sort is to cook same thoroughly, run through a cutter (grind up, bones and all, quite fine), then put on to boil again and season with salt (if required), black pepper and sage leaves. Keep well covered with water and skim off excess fat. Save the fat. Boil for five or six hours. While boiling, stir in good yellow corn meal gradually until the whole mass becomes thick like dough. Keep well stirred to prevent burning. When thoroughly cooked, pack hot in clean wooden butter tubs or stone jars. Pound it down well and then pour a thick coat of hot melted fat over the top. If stored in a cool, dry place this prepared meat food will keep sweet several weeks even in summer. Protect from flies and do not use spoiled or tainted meat. This makes a good beef scrap substitute. Scalded fresh fish are also good, but should not be fed too heavily to layers producing market eggs. Fresh killed game like woodchuck and rabbits can be fed to poultry to advantage when abundant. Best results are obtained when the meat is cooked and ground up, bones and all.

The granulated raw bone recommended for chickens is not green cut bone. It is raw bone, ground and kiln dried specially for feeding purposes. It is difficult to get good beef scrap for poultry feeding. The demand has been so much greater than the supply that unscrupulous manufacturers have adulterated the scraps with fertilizing materials, all sorts of diseased and dead animals, tankage and other waste fertilizer material from rendering works and soap factories. Some scraps have been found to contain preservatives and sufficient salt to be injurious to poultry. Some have shown, on analysis, contained arsenic and strychnine. Much of the common commercial scraps contain fine-cut bits of hide, hair, wool, bristles and other foreign matter injurious to poultry. We have generally been fortunate enough to secure good scraps, but we buy only by sample and insist on getting what we want. Unquestionably a lot of the scraps sold to poultrymen are not fit for poultry food and sometimes cause disease and loss. We believe that a poultryman could recover heavy damages from the dealer and from the scrap manufacturer if he would bring suit in cases where he sustains losses from unfit beef scraps, and he might be able to get his State Experiment Station and the United States Department of Agriculture to take hold of the work of investigating such unwholesome foodstuffs. There is no doubt that a lot of useful work could be done investigating commercial poultry foods and particularly beef scrap.

Duck Ration.

Q. I have been repeatedly told by the local poultry raisers, who know nothing about balancing rations, that the duck food, for which I give formula below, is not properly balanced. I will appreciate it if you will criticize it

French's Poultry Mustard

Not a Table Condiment, But Made From the Choicest Imported Mustard Seeds. For Use With Poultry, and Prepared to Produce the Most Excellent Results. The Original Poultry Mustard in America! Don't Accept Counterfeits!

Recommended by Poultrymen. Used by the largest fanciers in the United States. See testimonials from such noted breeders as Haldie Nicholson. Edward Corning of Bound Brook, N. J., E. B. Thompson, the President of the American Poultry Association, and the largest poultry and egg producers in the United States.

32-page booklet of Ralph Allen's experiments in England, together with other articles upon the subject of Mustard for Poultry sent free. Write without stamp to **THE R. T. FRENCH COMPANY, Department A, Rochester, N. Y.**

MISS CAREY *EXPORTER*

PONIES - - - from **$200** DOGS, all breeds - - from **$60**
SHOW BIRDS - from **15** EGGS per sitting - from **5**

ALL VARIETIES OF WATERFOWL, PIGEONS, FANCY FOWL SUPPLIED TO ORDER

Utility or exhibition poultry or duck farms stocked on profitable lines; advice on management free. Contracts accepted for teams to exhibit at any show or for private collection of birds in any specified color or breeds. International collections of feathered fowl from all or any one country.

Ten years ago the business commenced in a tiny yard on the East Coast of Lincolnshire, England, today I hold with a varied export trade all over the world with head offices in one of London's principal thoroughfares from where the trade can be more promptly dealt with, and have probably shipped more winners of the blue to America during the last four years than the majority of the other breeders put together. Our method is to give full value for money and win satisfied customers. I have now in some breeds a greater demand than can be supplied and importers are advised to inquire early. 1914 show birds will be ready from August onwards, only address

TOYNTON, SPILSBY, ENGLAND **Cable—Carey, Spilbys**

and suggest a better one. My ducks lay as well as I could expect and look healthy:

Two pecks of corn meal.
Two pecks of wheat bran.
Two pecks of red dog flour.
One and one-half pecks of alfalfa meal.
One and one-half pecks of beef scrap.
Two pounds of fine charcoal.

This is given to the ducks morning and evening. The midday meal is cracked corn. The only objection I see to it is that it is hard to mix. If little water is added it gets lumpy, and if more is added it becomes the consistency of putty. W. L. G.

DON'T let your chickens belong to the "I Didn't" class. USE

Mundee's Lightning Roup Remedy

The remedy that hits the spot and cures the bird. Used by the world's best breeders. Two sizes, **50c** and **$1.00** a bottle. Write for folder.

W. J. MUNDEE, Libertyville, Ill.

Knowledge vs. Prejudice

Oculum users know. They say **Oculum** cures for them Cholera, Roup, White Diarrhoea, Gapes, Blackhead and Leg Weakness; puts ¼ to 1½ pounds extra flesh on chickens; promotes health and increases egg yield.

The prejudiced, **who have not used it, and who know not,** say it's impossible.

U. R. Fishel, Treasurer American Poultry Association, says he would not do without **Oculum** if it cost **five** times what it does. Has he knowledge or is he prejudiced?

Dealers 50c and $1.00 per bottle. Do you want to know? Then, send a dime (postage) and get either size you wish. **Try it and know.** Send balance if O. K. Testimonials from your state **free.**

JOE-PYE ORPINGTON FARM
HARRY STACEY BENTON, Owner
R. F. D. 5, SO. NORWALK, CONN.

A. Why pay any attention to what neighbors say when you are getting results that are satisfactory to yourself? We have always noticed, in the poultry business, that visitors and neighbors can ever furnish abundant advice as to how one should run his business and what he ought to do, ought not to do, etc., ad libitum. If we heeded all gratuitous advice offered by visitors, we would either be in the poor house or an asylum. The only safe way is to let such advice run in one ear and out the other, and if, by chance, a useful or practical suggestion should accidentally come along, you can screen it out and preserve for future use.

If your mash is lumpy and putty-like, it is probable that you have a little too much red dog flour in it. This ingredient varies so in quality that it is difficult to fix the exact amount desirable. You can get at it best by using just enough red dog flour, after you wet up the balance of the mash mixture, to just comfortably stick the mash together so that it will ball up in the hand. After you get the right proportion you can mix all your ingredients dry. Put the proper amount or water in your mixing trough, then add the dry mixture and work it up with a flat shovel. Unless you have a power mixer that is the easiest way. We would keep the charcoal before the birds in a box and would not mix it in the mash. When you are getting satisfactory results from a ration, don't make radical changes in it without good and sufficient reason for so doing. This is a big country and local conditions vary a whole lot in different sections. Commercial feedstuffs, even when sold under the same names, are liable to vary a whole lot in quality and makeup. Results are what you are after and the method that yields the desired results is the one to tie to, no matter how the presumed "balance" figures out on paper. There are wide variations in the analysis of the same feedstuffs.

Diagnosis Wanted.

Q. Kindly tell me name of disease and cause and prevention. My poultry hold their bodies tilted forward and tail very high when moving. When still their tails droop. They step as if it hurt them. I found yellow crusts on inside of thighs. C. D. C.

Grand Rapids, Mich.

A. It is, of course, possible that you have some infectious intestinal disease affecting your flock, but that could only be determined by careful study of the birds themselves. We think it much more probable that you have been using kerosene or liquid lice killers carelessly and that your birds have been blistered on soft parts of breast and inside of thighs; that would account for the position, the walk and the yellow crusts.

Watch Dog for Poultrymen.

Q. What kind of dog would you recommend for watch purposes on a poultry plant? W. J. G.

Sisseton, S. D.

A. Either a good Airedale Terrier or a Collie. The Collie can be trained to round up the birds and make itself generally useful. Our chief objection to them is their very affectionate disposition, the tendency to be anybody's dog for the sake of a petting, the liability to run away and visit for days at a time. If kept on a chain and trolley wire they make fine watch dogs and owing to their quick, nervous snapping

a thief will think twice before tackling one.

As a farm watch dog, however, we like a good Airedale Terrier best. In our experience Airedales are apt to prove a "one-man dog" and know only one master. In a watch dog that is a mighty fine trait. They have wonderful endurance and courage. Are fine killers of rats, skunks and other troublesome pests, and they can be taught to let the poultry alone. The Airedale can be taught the bounds of your farm and to stay within bounds, and he is not likely to permit strangers to handle or move anything on the place. We have found them gentle with children, very intelligent and obedient, but supplied with abundant watch-dog qualities and apt to be a bit savage with trespassers, though seldom noticing anyone outside farm bounds. We had an amusing experience with our Airedale a couple of years ago. A lumberman delivering a load of boards at our place had a few floor boards for another party on top of his load and threw these off first in a pile by themselves before landing our lumber. When he started to put the floor boards back on the wagon our Airedale objected and crouched on the pile with a low growl and an ugly showing of teeth. The man indulged in a flow of unprintable language, but he didn't touch the boards or induce the dog to move until we came up and called him off. Then the man said: "I'd like to buy that —— —— homely cuss; he's worth havin'." But we didn't care to sell, and though the Airedale has been shot, clubbed and half killed twice, he still remains a good watch dog of the stay-at-home kind.

Loss of Feathers on Heads.

Q. I have sixty Rhode Island Reds that have some trouble on top of heads; all the feathers seem to come out. What is cause and remedy? R. C. W.
Long Branch, N. J.

A. The most common cause is lack of sufficient fresh green food. Get the birds on open range where they can have plenty of succulent green pasturage. Grease the heads and around the vent with a little sulphur ointment as an additional remedy in case mites and lice are partly responsible.

A Disease Experiment Stations Should Investigate.

From many parts of the Middle and Southwest we have had reports this Spring of a "new poultry disease" which in some sections appears to be epidemic. It is commonly fatal and the symptoms suggest poisoning with diseased corn and possibly followed by specific infection after the poisoning has broken down normal resistance and made conditions favorable for development of infectious disease. That there is abundant work and opportunity for a good, capable bacteriologist, who isn't wedded to one particular germ, to investigate poultry diseases cannot be questioned.

This disease usually attacks good layers and good feeders. The symptoms commonly noticed at first are roughened plumage, dumpy appearance with head and neck drawn in on body. There may or may not be paralysis of neck muscles. Neck may be partly limp and head drooped or may be twisted and head drawn back on body. (These are common symptoms of abdominal irritation.) Comb and face pale. Legs

shrunken. Fever. Eyes may show contraction or dilatation of pupils, sometimes irregular. Vision seems to be impaired or distorted. Hen walks with tottering, wabbly gait as if sore and weak. May pitch forward or backward and may droop wings in effort to support balance. Evident vertigo. Trembling of body common. May or may not be looseness of bowels with watery droppings or pasty dark green stools with considerable white. Generally lays fairly well until first symptoms are noticed. Usually toward last of laying lays soft-shelled eggs or eggs without shells. Fowl acts as if in great discomfort or pain. Uneasiness. Difficult breathing. Left side of abdomen frequently very full and tender to touch.

Post mortem reveals contraction of arterial capillary blood vessels, especially in reproductive organs, apparently to the point of death of tissue. Commonly venous congestion of liver, ovaries, testicles, oviduct and of lymphatic glands. Not uncommonly venous hemorrhage of liver, oviduct or ovaries and sometimes in lungs and intestines. In some cases there is rupture of spleen. Intestines usually fairly normal, except for such adhesions as accompany severe peritonitis when same is noted. Not infrequently rupture as well as congestion of oviduct and eggs, or partly formed eggs and egg tumors free, in abdominal cavity. Ovaries discolored and with soft, flabby yolks and evidence of yolks having been discharged into the abdominal cavity. Commonly there is peritonitis with an abundance of fluid and adhesions and frequently there is cheesy pus present and a peculiar foul, musty odor of abdominal contents.

There are many things about this disease which suggest poisoning with corn smut (corn ergot or ustilago maidis). It may be, though, that such poisoning when it occurs only makes the way easy for other infection. Inoculation with fluid from abdominal cavity of infected birds on healthy specimens in both males and females has reproduced the disease. In males there is first excitement of sexual function and then impotence, disease of testicle and later peritonitis and death.

We know that there is danger in diseased corn. We know that there are several groups of parasitic fungi to be found affecting spoiled corn. In the reported cases the corn-smut fungus may well be made the subject of careful investigation. Poisoning with this will produce similar symptoms and has produced abortion in cattle. It is worth noting that abortion in cattle and "staggers" in horses are common in sections reporting this poultry disease. It would also be well to study in connection with this disease the action of the parasitic fungus causing "green heart" in corn and held responsible for pellagra. The group of Aspergilli, mould fungi not infrequently found in musty grain, may well be studied also in this connection. And not to be overlooked are other poisonous fungi common in sour wet soils, particularly the common "bug agarie."

From our correspondence it would appear that this trouble is particularly prevalent this Spring and on the increase. It is worth careful study and should be investigated by experienced bacteriologists in a well-equipped laboratory. The information given here is only a brief summary from field experience, observation and correspondence. We haven't attempted to make a positive diagnosis, but merely to suggest a line of investigation. It may be that all cases reported and investigated are not the same ailment, probably are not, but there is a suggestive similarity in most cases. Also many cases of "intestinal irritation" and "auto-intoxication" in growing chicks associated with feeding on spoiled, soured and mouldy grain food, may well be considered in connection with this "new" disease. There is abundant room here for the trained investigator who honestly wants to work for the benefit of poultrydom and not for the promotion of some patented nostrum.

Loss of Back Feathers.

Q. What is this disease? I first noticed it on one of my hens in January. All the feathers on the back disappeared, leaving only stubs with a little light colored fuzzy, downy stuff. She died yesterday and I do not know whether that caused it or not, but I think it did affect her laying. She was laying at the rate of seventeen eggs in December and laid only eight in April. She did not seem to show any other signs of sickness until yesterday, when I found her with her head down. Then she would jump up and seem to be struggling for breath. I have several valuable pedigreed hens now showing the

same signs she did, loss of back feathers and only stubs and fuzz left.

Pembine, Wis. R. B. M.

A. The loss of back feathers probably had nothing to do with her death. Cause of losing the back feathers is probably an over-attentive male bird. Cause of death may have been intestinal disease or peritonitis.

Wry-Neck in Chicks.

Q. What ails chickens when they hold their head up and twisted backward as far as it will go? Many of mine have been so afflicted. M. M. B.

Cottonton, Ala.

A. It is a symptom of intestinal or abdominal irritation. Commonly from indigestion, intestinal parasites and various infectious diseases. In young chicks trouble is commonly the result of eating sour and musty food. Prevent it by avoiding the cause. Keep chick without other food than a little scalded sweet milk for two days. Then allow a little rolled oats rubbed up with well-boiled egg. Give scraped raw potato, a little boiled rice and return to regular ration gradually. Feed not oftener than three times a day.

Incubator Operation.

Q. (1) I have been interested in incubator operation the past four years and have tried hot air and also hot water incubators. I have had a few good hatches and a few I fell down with pretty badly. Would like to know in using a hygrometer how many degrees of moisture must the egg chamber have.

A. (1) We never use a hygrometer. Have no use for one. The manufacturers provide a scale supposed to be correct and indicate on same the desired normal point. We experimented with several hygrometers a number of years ago and could get no satisfactory results from their use. The readings would vary sufficiently to give anyone nervous prostration if he supposed the hatch depended on maintaining an approximately normal humidity. We "canned" the hygrometers after learning that the weather man in his observatory found 'em exceedingly difficult to manage. We get good hatches in both hot water and hot air machines and don't let the "moisture problem" worry us.

Q. (2) How can you add moisture in the best way?

A. (2) You can't add moisture to an incubating egg after it has been evaporated. You can check evaporation of contained moisture by keeping moisture pans in egg chamber or keeping wet sponges therein, if the air cell in egg seems to grow in size too fast. Cooling the eggs and sprinkling them will increase evaporation and increase the size of the air cell. In an egg about 2¼ inches long the air cell should be about one-fourth of an inch deep on the fifth day at deepest part; about one-half an inch on the tenth day; about five-eighths of an inch on the fifteenth day, and about three-fourths of an inch on the nineteenth day. This can be taken as approximate only and there is considerable normal variation.

Q. (3) By placing a woolen cloth in the bottom of the egg chamber at hatching time would this hamper the moisture and to what extent?

A. (3) Chief effect would be to retard circulation of air in most styles of incubators.

Q. (4) If incubator was lined inside with tin would moisture be sustained?

A. (4) Don't know. Fail to see any advantage. We are disposed to believe that the "moisture question," so-called, in artificial incubation is made use of a good bit like the "hocus pocus" of the old-time magician. We have tried a lot of moisture experiments and have hatched with hens with many variations of moisture conditions and likewise with various types of incubators. With good eggs we got good hatches under widely varying conditions, and with poor eggs, poor hatches. If the eggs were dried down much the chicks were apt to be small and the hatch only fair. If the eggs were not dried down enough there were apt to be more chicks dead in shell and more not well finished. In other words, over-cooling and under-cooling did not yield as good results as moderate cooling, and, for the life of us, we couldn't put rules for cooling in table form, since conditions vary with the day and we cool and handle the eggs almost wholly by sense of touch. If they feel right we feel sure that they are right. We prefer rather sluggish ventilation in an incubator to abundant ventilation and strong air currents, and believe that where the ventilation is a slow process and where cooling (or airing) of the eggs is done in moderation one gets bigger chicks with bigger legs and a better chance to live. Incubator hatches this season beat out the hens with the same eggs. Last season the hens had rather the best of it. As the huckster says: "You pay your money and takes your choice."

FIRST ANCONA PULLET-CHICAGO, 1912
BRED BY
DR. GUY BLENCOE, ALMA CENTER WISC.

Blencoe's ANCONAS
Eggs now one-half price.
MRS. GUY BLENCOE Alma Center, Wis.

Q. (5) When animal heat in the eggs begins to increase what is the best way to check temperature from rising too high?

A. (5) Turn down the lamp. The oftener we have to turn down the lamp after the tenth day the better we feel about the hatch to come. In warm weather we sometimes put out the lamp during the last of hatch.

Q. (6) What is cause of hen laying egg with small ridges on it that show a transparent spot on holding egg to light?

A. (6) Abnormal functioning of oviduct.

Q. (7) What can be done for hens that have bare backs and bare posterior parts?

A. (7) Take away from the males and put out on a good large green range. Feed on whole grains once a day and let them forage for the rest of their living.

Q. (8) What is cause of cock and hens shaking their heads?

A. (8) May be only nervous action. May be irritation from lice.

Chicago, Ill. Subscriber.

Mash for Growing Stock.

Q. Kindly let me know if the following mash I am feeding to growing stock is all right or whether I am feeding too much beef scrap:

Corn meal, 8 pounds.
White middlings, 8 pounds.
Ground oats, 8 pounds.
Bran, 6 pounds.
Bone meal, 2 pounds.
Beef scrap, 5 pounds.

I am also feeding grain twice a day. I generally mix the mash with sour milk and sometimes I give them some of the milk to drink. E. R. B.

Allegany, N. Y.

A. You are using the beef scraps a bit heavier than you need to where you mix mash with sour milk. With your mixture would expect the mash to be a bit too sticky. If you add four pounds of bran and two pounds of corn meal the mash should have a better consistency. We usually give growing chicks the same mash used for laying stock.

THE 1914 CHICK GROWING CONTEST.

WE have a fine number of entries in the American Poultry Journal Chick Growing Contest for 1914 and every contestant in earnest and out to win the prize money. We are glad to see so much interest and hope it will continue throughout the season. The full details and rules of the contest were printed on page 653 in April A. P. J., and on page 778 of May issue. Be sure to read and follow these rules carefully. If you are hatching chicks in June there is still time to enter the contest. The contest closes on September 1st and all photos and articles must be in the Managing Editor's hands by September 15th. While it is preferable to take the five photos of the same lot of chicks at different ages, it is not required that the same flock of chicks appear in each photo, but they must be your chicks and the same variety in all five photos. There are ten prizes. Do your best to win one of them and even if you should not win be sure that you have done your best to help boost your favorite variety with authentic pictures of them in five periods of growth. In addition to the list of names printed in May the following entries have been received:

Wesley Rakow, Wheatland, No. Dak.
Mrs. B. F. Clettenberg, Delavan Lake, Wis.
Mrs. J. C. McLaughlin, Rice Lake, Wis.
M. W. Puette, Ridgecrest, N. C.
Mrs. E. J. Weaver, Rock City Falls, N. Y.

1st Cockerel, Madison Square Garden, 1913 — Head of 1st Pen Philadelphia

Summer Sale of Rancocas Stock
Rancocas have in their breeding yard over sixty birds that have won at such shows as Madison Square Garden and Palace Show, New York City, New York State Fair, New Jersey State Fair, Boston, Philadelphia and Hagerstown. We have hundreds of early chicks bred from them that are coming on splendidly. We propose for the first time in the history of the farm, to hold a summer sale, and to offer at reduced prices some of our record birds, together with 200 other choice specimens.
This will be an unusual opportunity to secure White Leghorns and White Rocks that have won national fame. The sale will include White Leghorn males that have won as follows: First Cock at Philadelphia, 1912; First Pen Male at Philadelphia, 1911; First Pen Male at Boston, 1913; First Pen Male at Madison Square Garden, 1910; and such famous White Rock males as Second White Rock Cockerel, Boston, 1913; Third Cockerel at Madison Square Garden, 1913; Fourth Cockerel at Madison Square Garden, 1913, and Fourth Pen Male at Boston, 1913. This sale will include many other record birds and choice breeders. Write for our summer sale catalog.

AN EGGS-TRAORDINARY EGG LAYING CONTEST.

PARK RIDGE, Ill., besides being one of Chicago's prettiest suburbs, is also a hot-bed of "dyed in the wool" chicken fanciers. Not only have the grown-up folks the hen fever in its worst form but also the children have contracted it, and it is spreading throughout the village as rapidly as the measles all on account of a recent remarkable egg-laying contest which was instituted by the Business Men's Association of the village. The contest has stirred up the village from end to end, and since its introduction the Park Ridge Schools have taken up the study of Practical Poultry Culture, and the classes are very enthusiastic. The contest was won by Jules Plomb on a pair of White Rocks, who out of a possible 84 eggs produced 70 during the time of the contest, which ran from March 21st to May 2d. This is quite a remarkable record when it is considered that the pens were only 3′ x 4′ x 7′. The pens were built by the Manual Training Classes of the local grammar school, boys under 14 years old. A committee appointed by the president of the Association drew up rules and supplied prizes aggregating $300.00, consisting of Incubators, Poultry Appliances, Silver Cups, Feedstuff, and everything pertaining to the poultry industry. The youngest exhibitor was four years old and won the 15th prize. A special committee collected the eggs every evening and a tabulated score board was kept on exhibition in a prominent store window, and the crowd of people scanning the score board daily reminded one of a crowd watching the baseball bulletins. The pens were under lock and key, the committee holding the keys. There were 49 pens entered and 2,240 eggs were produced during the 42 weeks the contest was in operation. Thirteen girls entered pens in the contest which contained nine varieties of standard bred fowls and 7 pens of common hens. The children were obliged to feed their own hens and clean the pens and otherwise care for the birds. They were honest in the interest, and not a single egg was smuggled into the nest. Many amusing stories are told of how the children tried to coax the hens to lay; among others how one little girl tried to feed the hens on chocolate drops. The business men will try to arrange a poultry show this coming fall, and next spring another

contest is to be arranged on a much larger scale. Keep it up, kids.—L. A. Stahmer.

A MEMORIAL TO WILLIAM BARRY OWEN.

A LIFE is measured largely by what it has accomplished and a finished work is a greater memorial than any which may be erected by other hands, no matter how true the appreciation of the work accomplished or how strong the regard for the life whose earthly career has ended; for the work is itself an expression of the character, the personality and the ability of the one to whom it owes its origin, its progress and its final completion, and therefore is the fittest memorial, for it is wrought by the man himself.

The life of William Barry Owen was comparatively but a short life in the largest fancy poultry farm in the country, and customers everywhere were glad to advertise that they had Owen Farms strains, and these strains have been the foundation of more flocks of fine poultry than any other strains in existence. William Barry Owen and Owen Farms stood behind the sales made and there has never been a farm more liberal with its customers or that has gone farther in its desire to make good where there has been even the slightest cause for dissatisfaction. The personality of William Barry Owen entered into his correspondence and his customers felt that he was their friend and trusted him, and no letters which he received gave Mr. Owen quite the pleasure that those afforded him in which customers wrote him of their appreciation of what he had done for them. In its show record Owen Farms reached the zenith. No other farm has ever made such sweeping victories in

Park Ridge Business Men's Committee in charge of recent Egg-Laying Contest for school children. Reading from left to right, Fred C. Stagg, Harry C. Miller, J. H. Bell, E. H. Wood, Geo. Schrofer.

number of its years, but in its accomplishment it was a long life, and one which will be long remembered for the kindly heart, the strong personality, its love of the ideal and true and for its enthusiasm and keen optimism. It has also been a busy life and whatever work has been undertaken has received all of the enthusiasm which William Barry Owen had to bestow, and the supply was absolutely unlimited, and it is to this boundless enthusiasm more than to any other one characteristic that his success has been due.

Owen Farms was established after William Barry Owen had finished what might be called his business career and had retired from active work. The breeding of fine poultry was taken up for the love of it and with the purpose of possessing the finest flocks of thoroughbred poultry in America and to occupy the time of leisure which had come to him. His energy and enthusiasm, however, could not be kept in check and to his surprise and pride Owen Farms in a few years was acknowledged to be the foremost and the show room in the strongest of competition.

When Mr. Owen's failing health a year ago caused him to give up the business and it was sold to the writer, it was his desire that I retain the name Owen Farms. Mr. Owen's enthusiasm for poultry, however, was so great that he felt when he recovered his strength he would likely establish a large Leghorn farm and I knew that should he do so it would undoubtedly be his wish, and also his right, to use the name Owen Farms himself, and for that reason it seemed wiser for me to do as I did during the first few months of my ownership of the business and advertise under my own name as successor to Owen Farms. During Mr. Owen's hopeless struggle with his fatal malady the past few months I decided to conduct my business in future under the name of Owen Farms as a memorial to William Barry Owen, and it is my earnest purpose that Owen Farms now and through all the years of its existence shall be an honor to its founder, continuing along the lines of fairness, liberality and the personal interest in each customer which have given Owen Farms the position it holds today, and that the product of Owen Farms shall everywhere be recognized as the acme of perfection in thoroughbred poultry.

No man has done more during the past ten years for thoroughbred poultry than has William Barry Owen and the poultrymen of America will not forget it. Letters of sympathy and sorrow have come in from poultry breeders all over the country; letters expressing appreciation of the great good which William Barry Owen has been to the poultry world and regret that his life had so soon to end. But the success of Owen Farms had been accomplished and it stands as a great memorial to William Barry Owen.

Home and the Table
Good Things for Everybody

Helen J. Woods, Editor

Never yet was a springtime,
Late though lingered the snow,
That the sap stirred not at the whisper
Of the south wind, soft and low;
Never yet was a June time
When the roses forgot to blow.
—Margaret E. Sangster.

OF ALL things deplorable, none is perhaps more so than the man or woman who is waiting for the future to bring all life's enjoyments—the past picturing nothing worth while, the present to be passed over hurriedly in hopes of attaining something more pleasurable.

The people who really live, finding joy and comfort in the process, are those who make the most of the twenty-four hours in the day for work and rest, for study and enjoyment, for help and encouragement. The idlers and waiters never reach the desired state to which their longing eyes are turned.

Work if strikingly uncongenial, or if we are unadapted to it, is undoubtedly a curse, but continued idleness is even more so, and much more destructive to natural ability.

Some of the most pleasurable things in life are to be found in doing those things in which we are interested, since being in sympathy with an undertaking robs it of its element of work or hardship, and we go about it with a keen zest impossible where uninteresting or distasteful work is forced upon us.

However the situation, whatever the environment, we are each to a great extent masters of the situation. That unknown, unfathomable quantity, the personality, is what counts. Time was when the threadbare excuse of "he never had a chance" covered a multitude of misspent, groan-laden years, but in this day and generation we know that every one gets an opportunity to better himself if he never gives up looking for it, and is willing to grasp it when it comes along. His personal force in the matter will tell on his environment either for good or ill. He may be unconscious of his power and influence over associates and things in general, but his personal force will either make or mar the situation.

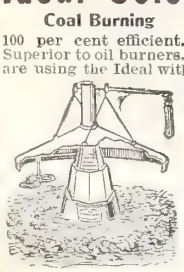
Do we not all know men and women whose mere presence puts us at our ease and brings out the best there is in us, who radiate charm and energy, who inspire us with an unwavering desire for broader knowledge and keener ability in our work? They do not attempt to acquaint us with their store of knowledge. Their lives picture it, their works prove it, their personality wields its marvelous influence over all with whom they come in contact.

On the other hand we have all felt the blocking, stunting influence of the restless, dreadful type of individual who not alone fails to accomplish anything worth while himself but spends his time preventing other people from doing so. Nothing is more wearisome or nerve-racking than a constant jostling against these human stumbling blocks.

The man or woman who has work to do has no hours to lend attention to long, detailed recitals of hard luck stories. It is too much to expect of good nature to stand and listen while the morning train which we must catch, keeps to its regular schedule, or the bacon and muffins burn to a crisp—but there are those who expect it, nay, demand it as their right.

These hard luck people invariably believe that some "spell" or special evil dispensation has been visited upon them, but the source of their disaster eminates from themselves. Not content with being abject failures themselves, they magnify their tribulations and use them as hindrances in the path of those who would be about their affairs in an effort to accomplish something worth while.

No human has ever lived many years in this life who has not had disappointments; crushing sorrows have been the lot of many, but in the long run the good things always out-balance the bad, and the personality that stands for the best in life radiates a charm and influence that speaks for itself with more force than hordes of people endeavoring to demonstrate their worth.



The vacation season now at hand plainly makes evident the lack of appreciation by the multitude generally. There are more frazzle-edged nerves at the end of the season than there were

O. K. STOCK FOOD CO., 501 Traders Bldg., Chicago

at the beginning. Every one needs a rest and a change. People need to get away from their associates occasionally, see new places and learn how the people in the next state or county live. They may have progressed more than we have in the home town. It is certain they can teach us some things worth while. It may be that they are living simpler, saner lives than we are, or that they are more appreciative of the homely, every-day joys of life, or that they are making the most of a very little. Like Nature, we are sometimes prodigal of our stores, and not wholly appreciative of the good things all about us. Above all we do not want to be provincial—and some of the most provincial are from the large centers of population. Everywhere we meet the man or woman who compares every other place with the home town—and unfavorably. The buildings are larger at home, the schools better, the churches better filled, the people more cultured. The monotony of the thing is tiresome in the extreme. There is no one best place on this earth; for while one place may have the largest office building, another may have the widest view, or the purest air, or the greenest fields, and there is something worth while everywhere.

We cannot all take the vacation we would like, but we can appreciate the little pleasures as they come. The enjoyment of an occasional afternoon in the woods, a row up the little winding river at sunrise, a camp supper on the beach in company with friends and neighbors, or an hour spent in rest and reflection at some special vantage point at sunset, will prove a welcome change and break the dull monotony of the same daily tasks. The most overworked can take in these little pleasures if they are willing to make the effort. The children in the family will lend willing hands in preparation of a lunch and they will gladly carry the baskets and pillows. Never was a child unwilling to assist in the preparation for a picnic. And they will prove the life of the party. It requires a few adult "kids" to make an exclusively "grown-ups'" picnic a genuine success, and to inspire the participants with real childlike enjoyment of back-to-nature affairs. There are a few people who cannot unbend from their straight-laced dignity sufficiently to sit on the ground under the shade of a spreading oak and eat cold fried chicken and mayonnaise sandwiches, drinking delicious hot coffee from a paper cup, without the aid of a full service of silver—but they are to be pitied. There is enough to be enjoyed in this world and the only real and lamentable lack lies in the failure to appreciate the good things.

Old Fashioned Jumbles.

By E. H. J.

Cream together two-thirds cup butter, one and one-half cups sugar. Add three eggs, one cup rich milk or cream, three cups flour, two teaspoons baking powder, grated rind of one lemon. Drop by spoonfuls on greased pan and sprinkle with sugar. Bake in quick oven.

Delicious Lunch Cake.

Cream together one-half cup butter and one cup sugar. Add the unbeaten yolks of two eggs and beat until light and creamy. Sift together two cups flour, two scant teaspoons baking powder, one quarter teaspoon salt and two teaspoons cinnamon. Add this alternately with one cup of sweet milk

The Pullet Bred Line a Specialty

My birds have won this year also at Philadelphia, Williamsport, Pittsburgh, Hagerstown, etc. For years they have won at leading shows. If you are interested in Quality **My Maryland Strain** will interest you.

My New Catalogue for the Asking

It gives you full and complete information of my line with prices, etc. Eggs for hatching from selected pens containing all my winners. Write me your wants today.

R. J. WALDEN Box A MIDDLEBURG, MARYLAND

to the first mixture. Then add one teaspoon vanilla, the stiffly beaten whites of two eggs, and one cup of halved and seeded raisins well floured. Bake in a shallow cake pan in a moderate oven. Sprinkle the top with powdered sugar and cinnamon just before putting in the oven, to form an appetizing crust, when no frosting will be necessary.

Maple Bisque.

By E. C.

Into one-half cup of hot maple syrup stir the yolks of two well-beaten eggs to which has been added one tablespoon sugar. Do not allow to boil but cook in a double boiler or on back of range until the mixture thickens slightly. Remove to a cool place and after becoming thoroughly chilled, add one-half pint of whipped cream and the stiffly beaten whites of two eggs. Blend thoroughly, pour into a mold and pack in salt and ice for three hours.

Apricot Sherbet.

By E. C.

Boil one quart of water and one-half pound sugar together for five minutes. Press a quart of stewed and sweetened apricots through a sieve, add the juice of one lemon and the syrup which has been allowed to cool. Freeze the same as ice cream. After removing the dasher from the freezer, add the stiffly beaten white of one egg to which has been added a little powdered sugar, stirring it lightly into the sherbet. Pack and allow to stand for a time before serving. Peach sherbet made in the same way is very delicious.

Fruit Conserve.

By E. H. J.

Pare and core one large pineapple and chop the remainder in small cubes. Sprinkle with sugar and place on back of range to simmer until the juice is extracted. Some pineapples are much juicier than others but if it is found necessary add a little water. Add also four boxes of strawberries which have been stemmed and washed but not allowed to stand in water. Cook slowly until the fruit is tender and then add sugar to sweeten as desired. Boil down to the consistency of conserve.

Novelty Cookies.

By E. H. J.

Cream one cup of butter with one and one-half cups of granulated sugar, adding one well beaten egg. Dissolve one level teaspoon soda in one cup sour cream or milk and add alternately with sifted flour sufficient to form a dough that may be rolled. Add one teaspoon almond, lemon, or other flavoring as may be desired. Have a plate of sifted sugar and nut meats previously put through meat grinder (medium coarse wheel) and as the cookies are cut into rounds dip top of cookie into sugar and nut meat mixture and bake.

Nut Frappe.

By E. H. J.

Dissolve one envelope of gelatine in just enough cold water to cover. Then add just sufficient boiling water to melt gelatine. Add one pint whipped cream to which has been added one-half cup sugar and the stiffly beaten white of one egg. When beginning to harden add one cup chopped nut meats and one cup of fresh crushed strawberries. Serve ice cold in sherbet glasses with or without cream.

Chick Chats

by H. P. Schwab

June—The month of Brides, Roses and Chicks.

* * *

Flowery June,
When brooks sent up a cheerful tune,
And groves a joyous sound.

* * *

This is the poultryman's real busy season, between caring for the young and the setting hens, there is plenty to do on every plant.

* * *

Do it well, and do it right, do it prompt and do it regular, and when the harvest time comes you will have that satisfied feeling.

* * *

Peaches will be less than a third of a crop in Western New York this season, but the chicks promise a bumper crop with the real quality.

* * *

Lest you forget—the winners at next winter's shows will be hatched this and next month. It is not too late to order those choice eggs you have been thinking of.

* * *

Luck never Wastes any Time on the Let-Well-Enough-Alone Man.

* * *

The re-election of President E. B. Thompson is well deserved and is the proper caper, for it will now give him the opportunity to start off that new constitution upon which he and others have worked so faithfully. Mr. Thompson has devoted much of his time to the association, and has been president in fact, and we congratulate him on the great vote he received.

* * *

The best chicks are the ones that "Do Well" from the first day out of the shell. See that all do well by giving proper care, a good variety of food, and clean fresh water to drink.

* * *

The A. P. A. Election is over and the result is very pleasing to us.

* * *

In Mr. Joseph Russell, first vice-president, we have another breeder and fancier of note and worth, who will also make good. He has served in the Canadian Parliament and is a man of many interests.

* * *

Everybody knows Mr. A. A. Peters, the second vice-president. He won the east in a walk at the Atlantic City meeting last August.

* * *

The re-election of Secretary S. T. Campbell, is particularly pleasing. His great vote and majority of 2,107 over another candidate, plainly shows that the members are well satisfied with the service he has rendered, and that they wish more of it. Mr. Campbell has made the best secretary we have ever had, and we hope to have him for years to come.

* * *

The election of Messrs Hawkins, Steinmesch and Hemenway adds three well known and capable breeders to the Executive Board. There can be no question but that the country is saved again.

* * *

Mr. Hawkins polled an enormous vote which is a tribute to this sterling breeder and fancier, who also is one of the Association's oldest members.

* * *

Chicago wins the meeting which will be held the second week of August from the 9th to 15th. Both place and date a good selection.

* * *

Most all of the breeders are now selling eggs at half price and are also offering a part of their breeding stock for sale at special prices. If you have wants better look over the advertising pages. Now is the time to buy and get the benefit of the reduced prices.

* * *

Eggs and Baby Chicks from profitable layers is your only guarantee for SUCCESS in the poultry business. Isn't it a serious matter when eggs are selling for 35c to 50c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from. I breed for eggs and can furnish you stock that will lay when eggs are high. THAT MEANS YOUR SUCCESS.

PRICES	Eggs	Baby Chicks
From stock with records of better than 200 eggs and their special matings .	30c each	50c each
Form stock with records of 144 to 199 eggs and their special matings . . .	20c each	35c each
From stock without records but from trapnested blood lines	10c each	20c each

Note:—There are no discounts on eggs or baby chicks in lots of less than 200. Can make prompt delivery of eggs and baby chicks. Write for sales list. My instructive catalog is free.

JOHN G. POORMAN, Box 100, TINLEY PARK, ILL., U. S. A.

Reds and Silver and Golden Campines, has bought another farm and is building a plant worth while. The fine records he has made for two years has brought this man and his line to the front, deservedly so.

* * *

Poverty makes it easy to live the simple life.

* * *

It's better to uphold a good thing than to hold it up.

* * *

Our season's trip is ended and we will now roust-a-bout home for some time to come where we hope to hear from our eastern breeders and friends.

* * *

Keep the dry-mash hopper full before the growing chicks; the mash should contain plenty of bran, which is one of the best bone growing and size making feeds we have.

* * *

Proper feeding is sure to bring results and the proper raising and growing of chicks is just as important as it is to have the best of eggs to hatch. It is up to you Mr. Poultryman to make your quality.

* * *

The A. P. J. Year Book for 1914, which has just been issued, is a regular Poultry Encyclopedia, a handy reference book to have.

* * *

Ans to J. D. H. The sterner-sex, is the sex which is too weak to resist a temptation, a cocktail or a woman, and too infirm to put studs in its shirts or to fix its own bath.

* * *

Mr. D. W. Young looks good in the A. P. J., but not natural, for we have never seen him with his arms folded before. What we have in the S. C. White Leghorns today, we can thank Mr. D. W. Young for, and he can well rest, fold his arms and reflect, for his work fills several pages of poultry history that will live forever.

* * *

Captain Max J. DeBathe, the noted Orpington judge and breeder of England, has returned to his home from his hunting trip in Burmah, where he went after big game and got it, too, for he shot a tiger 9 feet long.

"Wingold" Buff Orpington hen. First at St. Louis; first at Cleveland, 1912; first at Cleveland, 1913; first at Buffalo, 1914. Bred and owned by F. A. Poertner, Berea, O.

The Captain reports a large and fine lot of youngsters, to use his own expression—they are stunners, and that means something in poultry.

We have received some old poultry books and papers that are very valuable to us and for which we are very grateful. There are still some others we would like to have and hope to hear from those who have any old books, papers or Standards.

* * *

A man's first love affair is a mere incident; his second an accident, and all the rest a habit.

* * *

For the year of 1913 the American Farmers' Harvest amounted to just $9,-75,000,000. This is the largest value the American farms have ever produced.

* * *

We know of an experienced and reliable poultryman wishing a position. This is a man we can highly recommend.

* * *

According to reports McAvoy is at it again, so let the Houdan breeders and fanciers beware. McAvoy got off too easy on his plea of guilty and next time no doubt, will draw a good term in prison.

* * *

We neglected in our last to mention the Atlantic City Poultry Show will again be held. For particulars address the Poultry Item.

* * *

Early to bed and early to rise, hustle like hel-en advertise.

* * *

The weakest spot in every man is where he thinks himself to be the wisest.

* * *

Mr. George J. French, president of the R. T. French Co., Rochester, N. Y., manufacturers of "French's Poultry

Poultry Diseases
and
Their Treatment
By F. A. Kaupp, M. D.

A book containing 185 pages, 5x8 inches in size and is profusely illustrated with original half-tone and pen and ink engravings. It shows the many parasites, germs, and bacteria that attack our poultry, as well as tells the names of the diseases, the cause or causes, the symptom and lastly the *treatment for each disease*. The book is printed on a high grade super calendared book paper, substantially bound in cloth, linen sewed to make it flat opening and the title is stamped in gold. Every poultryman should add this very useful book to his library. Remember that we prepay all charges on the book to your town.

Price $1.50
Send all orders to
American Poultry Journal Publishing Co.

Mustard," is hot in the game of chicken raising besides having a great collection of rare and fancy pigeons. In poultry he has Barred Rocks and S. C. White Leghorns and no doubt we will soon meet him in the show room.

* * *

We acknowledge receipt of "The Silver Wyandotte Star," edited by Mrs. Denton Cole, Binghamton, N. Y., a journal devoted to the Silver Wyandottes and its breeders. This first issue looks more than good and we hope this journal will be a big success, for the grand old Silvers deserve the best in the land.

* * *

We can and do deeply sympathize with the family and friends of Mr. Wm. Barry Owen; his death although daily expected for some time, was a shock to us, and we feel his loss. Mr. Owen was a valued friend and he did far more for poultry and his fellow man than will ever be known.

* * *

Mr. James T. Huston of Williamsport, Pa., is sure keeping the columns of the Fancier warm with a good line of general poultry news.

* * *

The friends of Mr. Reese V. Hicks will be pleased to know that he has

"Wingold" Buff Orpington cock. First at International Show, Buffalo, N. Y., 1914; special for best male, also first as cockerel, at Cleveland, 1913. Bred and owned by F. A. Poertner, Berea, O.

been appointed general manager of the International Poultry Sales Co., Browns Mills, N. J. This is a big job, but Mr. Hicks is a big man and we wish him every success.

* * *

This company make the International hovers, feeders, etc., and are also owners of the Rancocas Farms, the largest poultry farm in this country. In poultry they breed the White Rocks and S. C. White Leghorns, and the grand winning records they have made the past few years attest their quality for their winnings were made at New York, Boston, Philadelphia, New York State Fair, etc. Note their special announcement in this issue.

* * *

Mr. M. L. Chapman has charge of their breeding and exhibition departments, an old and valued friend, and a past master in poultrydom.

* * *

The Barred Rock Club 1914 catalogue will be issued this month; now is the time to send for one and to invest $1 for membership.

* * *

Better look up those trains for Chicago soon.

IT IS AN ENCYCLOPEDIA OF CHICKENDOM, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

E. O. Thiem, of Denison, Iowa, has been elected president of the National Poultry Club. Mr. Thiem is one of the oldest and most successful breeders of fine poultry in this country.

R. F. Neubert, who for a number of years has been engaged in the manufacture of incubators at Mankato, Minn., and who for a great many years has been engaged in the breeding of high-class poultry, has sold both his incubator business and his poultry farm to W. A. Weber and several other business men of Mankato. A company has been incorporated to be known as the R. F. Neubert Incubator Company, with a capital stock of $50,000. Mr. Neubert has no plans for the future except that he will take a much needed rest.

The New Jersey branch of the American Poultry Association will this year hold its annual meeting in July, at Vineland, instead of New Brunswick. The Vineland Commercial League is making plans for a big poultry week.

An egg-laying contest for the championship of the world has been suggested as a feature for the Panama-Pacific International Exposition, to be held in San Francisco in 1915. The suggestion comes from A. D. Dunnicliff, Jr., of Sydney, New South Wales, honorary secretary of the Australian laying competition, who has submitted his plan to I. D. Graham, assistant chief of the department of live stock of the exposition. The competition, as proposed by Mr. Dunnicliff, would begin in November of this year and end in November, 1915. The prospects are that the contest will be held.

"The Western Poultryman" is the name of a new monthly poultry periodical that has been launched in Salt Lake City, Utah. The first number was issued in April, and was a very creditable number.

The Sonoma County (Cal.) Poultry Producers' Federation has issued a manifesto urging all poultrymen to insist that Congress take Chinese eggs off the free list and put at least a six-cent tariff on them. The importation of Chinese eggs is a serious menace to the poultry industry of this country, the great egg-producing sections of the country already feeling the effect of the great influx of foreign eggs. If poultrymen throughout the country will write to their Congressmen, urging them to place a tariff of at least six cents per dozen on Chinese eggs, something may be accomplished.

The proposed change of classification from fourth to third class on shipments of live poultry out of South Dakota has, on the request of the State Railway Commission, been suspended pending an investigation on the part of the Interstate Commerce Commission. The proposed change would mean a heavy increase in rates, amounting in some cases to 50 per cent.

In an address before the Missouri Federation of Commercial Clubs at Jefferson City, Mo., recently, Governor Major presented some facts that made his hearers sit up and take notice. Among other things, he said: "The Missouri hen lays twenty-four eggs annually for reach man, woman and child in the United States. The value of the output of the Missouri hen is $50,-

Young's Strain S.C.W. Leghorns

I Have No Other Breeds

They are the standard for all the Leghorns of all America, and the greatest layers of all domestic fowls. At the World's Famous and Premier Show of America, at Madison Sq. Garden, New York, for the past thirteen consecutive years I have won best display and from three to five first prizes, every bird being bred and raised by me.

MY EGGS ARE NOW HALF-PRICE

REMEMBER, YOU CANNOT WIN WITHOUT MY STRAIN. MATING LIST FREE.

D. W. YOUNG - - - - - - - MONROE, N. Y.

Blue Orpingtons Silver Campines

HAVING finished rearing, I offer my best Blue Orpington eggs—best in the world—at $12.50. Second pen $10 a sitting. Silver Campines, $8 and $5 a sitting. Several sound, healthy breeding pens, cock or cockerel and three hens (Blues), correctly mated, $40 each. Bear in mind—I was the introducer into America in 1911, at the Garden Show, N. Y., of Blue Orpingtons, and started all the big American breeders in this variety with my stock.

Birds and eggs shipped at once on receipt of order. Live delivery in New York guaranteed. I have no representative in America.

Max de Bathe, Hartley Court, Reading, England

Member Advisory Committee, Panama-Pacific Exposition, 1915 Vice-Pres. Poultry Club of England

000,000 a year, which exceeds the annual wheat crop of Arkansas, the entire cotton crops of the states of Florida, Tennessee and Louisiana, and the gold produced from the earth of Arizona, Colorado and California in one year. If the eggs laid annually by the Missouri hen were placed end to end, they would reach around the world four times.'' Governor Major evidently believes in the Missouri hen.

Clarinda, Iowa, is fast coming to the front as a poultry and egg center. W. E. Keeney, of that city, is shipping an average of five cars of eggs per week from Clarinda to New York City.

''The Industrious Hen,'' first published and edited by Reese V. Hicks, in Madisonville, Tenn., and later sold to S. B. Newman & Co., of Knoxville, Tenn., who have published it for a number of years, has been sold to the Blair-Young Publishing Company, of Louisville, Ky., who will consolidate it with their magazine, ''Poultry Ideas.'' J. Gaylord Blair will be editor-in-chief.

O. T. Hallman, of Salisbury, N. C., has leased the plant and equipment of the Red Acres Poultry Farm, located near Salisbury, and heretofore operated by C. G. Corliss, and is making many improvements. The plant has a hatching capacity of 5,000 eggs at one time and is a well-equipped plant in every respect.

Wyatt Aiken, member of Congress from South Carolina, makes the statement that a poultryman in his district, a breeder of game chickens on an extensive scale, furnishes General Villa, the new Mexican ''hero,'' with all the game cocks the fighting Mexican uses in his chicken battles, and that Villa has bought his cocks from the South Carolina ranch for the past five years. Congressman Aiken did not give the name of the breeder, but says the farm is within a short distance of the old home of John C. Calhoun, in Abbeville county.

The farmers and poultry breeders in the vicinity of Mott, N. D., have organized a co-operative poultry association. Each farmer will guarantee his eggs. They will be stamped with his number so that in case a bad egg shows up it can be traced to the farm it came from. The association will in turn guarantee the eggs. The plan is to sell direct to the consumer. Already a firm in an eastern city is trying to contract for forty cases a week.

George S. Barnes, of Glyndon, Minn., is establishing a large poultry plant

289 Eggs RECORD FOR 1 HEN IN 1 YEAR **212 Eggs** AVERAGE RECORD FOR 10 HENS IN 1 YEAR

HALF PRICE
All eggs from the world-famous Aristocrat Barred Plymouth Rocks will be shipped out after May 15th at half price. This means eggs from each and every female I own, even the very best, the very richest. Orders booked now for delivery after May 15. Regular prices are as follows: $10 for 15, $17.50 for 30, $25 for 50, $50 for 100. Half price means just half of the above amounts for these same quality eggs. Eight fertile eggs guaranteed in every setting. Rush your order forward. First come, first served. Every day counts.

W. D. HOLTERMAN, Fancier, Box A, FORT WAYNE, IND.
The Aristocrats are the sensation of the entire Barred Rock world. Every breeder has his eye on them. Look up my large ad. in April issue.

near Glyndon, the buidings already being in course of construction. The laying house will be 330 feet long and there will be numerous other large buildings. An up-to-date equipment will be put in and White Leghorns will be raised exclusively.

On April 20 the "Missouri hen fund" in the state treasury was augmented by the receipt of a check for $1,269.28 from the State Poultry Experiment Station at Mountain Grove, this amount representing the sale of the surplus product of the station for March. The "hen fund" now totals $3,323.85, all derived from the surplus that is produced at the station.

Charles Y. Sumner and Mrs. Miriam Sumner, who last fall were married in a model henhouse, one of the exhibits at the poultry show held in Convention hall, Kansas City, Mo., are again in the limelight. Mrs. Sumner has had her spouse arrested, charging him with desertion and nonsupport. She is very emphatic in her declaration that a "henhouse" wedding is not a success.

A model two-acre farm, upon which poultry will be raised according to the latest scientific principles has been established at Concord, Contra Costa county, California, by the R. N. Burgess Company. It is intended to raise 3,000 hens on this small tract, which will be used as a demonstration farm. The possibilities of poultry raising for the two-acre farmer will be demonstrated. Mrs. A. L. Gardner will be in charge of the farm.

The buildings on the poultry farm owned by George Meyers and located near Preakness, N. J., were totally destroyed by fire one night recently. The loss is estimated at $30,000.

The United States Department of Agriculture has been asked to put a stop to the stuffing of the crops of live poultry in transit with gravel and ground rock, so as to add to their weight. New York poultry dealers estimate that in every 1,000,000 pounds of chickens bought by the housewives of that city, from 250,000 to 300,000 pounds consist of stone, sand and gravel.

Poultrymen of North Dakota are insisting that a complete course in poultry raising be established at the State Agricultural College. So far the poultry work at the college has been exclusively of an experimental nature. So many students feel the need of practical work along poultry lines that at least a short course may be established at the institution.

Last year two shows were held in the city of Washington, D. C., one by the Greater Washington Poultry and Pigeon Club, and the other by the Capital Poultry and Pigeon Association. May 11th committees from these two associations met and arrangements were made whereby a new organization will be formed under the name of National Capital Poultry and Pigeon Association. This assures but one show being held this year and it should be bigger and more successful than any yet held in the city.

Womans Success With Poultry

Helen F. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

CEMENT FLOOR FOR POULTRY HOUSE.

BY EDITH GRANGER HAWKES.

OUR new poultry-house, built in the spring, did very nicely for the summer with a dirt floor, here, where the summers are rainless, but before the winter rains set in it was necessary to have something more substantial. After thinking it over, and fired by articles we had read about the uses of cement on the farm, we decided that two women, if they tried, could manage a cement floor for that poultry house.

The house was ten by sixteen feet, with nests built to open on the outside, a row on each side of the door. We placed a board across the inside openings temporarily, and opened up the outside lids, so the hens could use the nests even when we were obliged to shut them out of the house.

The first thing, of course, was to clean and smooth the dirt floor, which was perfectly hard and dry. We planned to do the work in four sections, of four by ten feet each. (If we had been men, probably we should have done it all at once.) So we placed a board on edge, four feet from the back, and braced it so it would not fall. Next we spread a layer of coarse gravel four inches deep over the back section of floor, carrying it in bucket and coal-scuttle. It was heavy, too! This we pounded down as hard as possible with a piece of 4x4 about three feet long.

We had previously made a flat mixing-trough by nailing narrow boards on the sides of a packing-box cover about four feet square. Our sand and gravel was black, all brought from the creek, but some was much finer than the rest. This finer gravel we used unscreened for the body of the floor, and mixed it with the dry cement in the proportion of one bucket of cement to four of gravel. We spread it on the trough, mixing it with a hoe, and adding water with a watering-pot, wetting only a part at a time, and stirring it with a hoe. One of us carried it by the shovelful and poured it out on the gravel foundation, while the other spread and smoothed it out with a mason's trowel, carrying it carefully into corners and edges, and making the back a trifle higher than the front. The cement layer was about two inches thick.

When this layer was finished, we nailed a screen of chicken-wire over the open door, left the back open, so there should be a good circulation of air, and left it to dry over night.

The next day we moved the holding-board four feet toward the front, and made the next section, and the third and fourth days the same. Everything went well until almost the last moment, when one persistent biddy flew up on my back, over my head, and into her home, where she left the prints of her feet to harden as proof that the house was hers!

We were so encouraged with our success that the next year we built another floor, and this time were so ambitious that on the fifth day we screened some of the gravel (first through a wire of quarter-inch mesh, then through screen-wire) to obtain some fine sand, and this we mixed with cement in the proportion of one part cement to three of sand, and spread a thin smooth layer all over the surface of the floor. This year, for the wetting, we used the hose instead of the watering-pot, turning on the faucet so that a thin trickle entered the trough continually.

These houses were easy to clean either by scraping or by hosing, and were so

slanted that when hosed the water would all run out at a hole made in one front corner of the wall. The amount of cement used for each house was two sacks. The first floor was built six years ago, and both floors are just as good today as when they were made.

PROFIT WITH INDIAN RUNNER DUCKS.

BY MRS. R. L. PORTER, CHENEYVILLE, LA.

EVERY housewife longs for some means of earning a little extra money. Especially is this true of the farmer's wife, where ready cash is not realized till the crops are gathered in the fall. I know of no better way for the farmer's wife to realize her dreams than by raising a good flock of Indian Runner ducks.

Several years ago I purchased a pair of the White Indian Runners early in May, and nine months later had one hundred and twenty-five ducks past the danger stage. Just one year from the time I purchased the first pair I had three hundred ducks and ducklings, all from that one pair, but there were at this time three generations of ducks in the yard.

There is no more attractive fowl than the alert Indian Runner. I selected the White variety because they breed true to color and because I like a one-color fowl. The Runners are remarkable foragers, very hardy, free from lice and mites and do not require a pond in which to swim. They lay a pure white egg that is as palatable as a hen's egg, and especially desirable for cake making, the yolk being richer than that of the hen's egg, yet very delicate in flavor. I use the whites of the Runner eggs for making icings for cakes, and for French nougat and other candies, and find them unexcelled for this purpose.

For the table there is nothing finer than roast Indian Runner duckling. They are grown at ten weeks and are as tender and juicy as squabs.

The yearling Runner begins the moult about the first of July and are laying again by the last of August or first of September. Mine lay all winter long and from September to January bring good prices for market purposes. After that I use them for sitting, bringing off the first hatch early in February. These early hatched ducklings will if properly fed and cared for, begin laying in July.

For breeding purposes they should be mated in pens of five or six ducks to one drake and not too closely confined. The fertility of the eggs is remarkable. I have frequently had a hen hatch twelve ducklings from as many eggs and raise the entire flock and have them ready to market in less than three months.

The farmer's wife who wants an occasional roast green duckling for her table and who is in search of a desirable way to earn the ever necessary "pin money," will do well to try a flock of these industrious, quick growing "quacks."

J. C. Fishel Appointed Postmaster at Hope, Ind.

The many friends of J. C. Fishel will be pleased to learn that President Wilson has just appointed him postmaster at Hope, Ind. During the many years Mr. Fishel has been breeding and selling White Wyandottes his main object has been to please his patrons, which he has always done. He will, without doubt, carry out the same ideas in connection with the postoffice at Hope.

The Journal congratulates him on his appointment and wishes him every success.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

An egg-cleaning machine has been invented by Henry M. Fedderson, Petaluma, Cal. The soiled eggs are cleaned by this device by means of a rotating brush which slants down into a basin of water. The brush is supported from a tilted bracket, and is operated by a

Egg cleaning machine, patented Feb. 10, 1914, by Henry M. Fedderson, Petaluma, Cal. No. 1,087,005.

crank and gears so that it may be spun around rapidly and the cleaning accomplished with great expedition. It is undoubtedly a time saver, especially as compared with using a damp cloth for the purpose. Patent 1,087,005.

A Chicken-Coop invented by Ernest E. Bell, Council Hill, Okla., is operated by the chickens themselves. It limits the number of chickens that may enter the coop, and thus tends to obviate the danger of their crowding and suffocation. A tray member, positioned within the coop adjacent the door is mounted to move freely and vertically. This

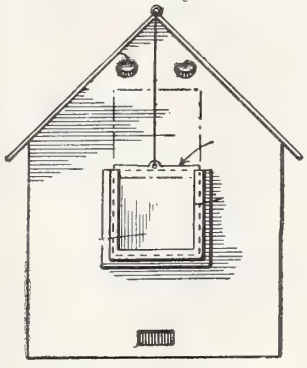

Fig. 1.

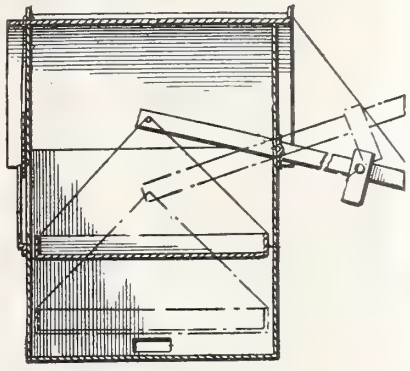

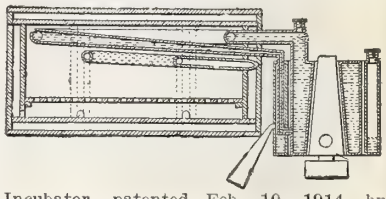

Fig. 2.

Chicken coop, patented Feb. 24, 1914, by Ernest E. Bell, Council Hill, Okla. No. 1,088,516.

tray is suspended from a weighted lever. A door is operated by this lever. When a sufficient number of fowls have entered the tray or pan within the coop to counterbalance the weight, the pan will slowly descend carrying with it the fowls or chickens and the door will slowly close, thereby safely housing the chickens within the coop without frightening them. Patent 1,088,516.

Henry F. Faupel, of Raton, New Mexico, is the inventor of a new incubator. It comprises an annular water tank, a heater disposed therein, an annular air chamber surrounding the water tank and having inlet above its lower end, an air pipe extending from the air chamber into the case, and a water conduit disposed within the case. The water conduit embodies a supply pipe and return pipe, the supply pipe being attached to upper end of the water tank. The outer end of the return pipe extends downwardly through the

Incubator, patented Feb. 10, 1914, by Henry F. Faupel, Raton, New Mexico. No. 1,086,811.

air chamber and is attached to the lower end of the water tank. Patent 1,086,811.

A self-feeder and drinking-fountain for poultry is the invention of Joseph Schlichtinger, of Atlanta, Ga.—and self-feeders are always interesting for they save a lot of labor to the poultryman who prefers to exercise his poultry instead of himself. The device comprises a cylindrical trough, having an upward and inward inclined conical base, with an upward and inward inclined circular wall over this base. This

wall has circular feed apertures, as illustrated, and a central opening and catch devices around the opening. A reservoir is provided having its mouth portion projecting downward within the trough below the top of the conical base. There is also provided a downward and inward inclined supporting ring having lower means of engagement with the reservoir mouth portion and upper catch devices separably engaging the catch devices of the inclined circular wall of the trough. The inclination of the wall in which the

Self feeder and drinking fountain, patented March 24, 1914, by Joseph Schlichtinger, Atlanta, Ga. No. 1,091,392.

feeding apertures are located prevents chickens from roosting on the device and insures its sanitary condition at all times. The feed receptacle may readily be removed and filled. Small chickens are favored more than large ones by this device, for they can crane their necks into it when the apertures prove too small for larger fowl, for whom the feed is not intended. It will be understood that the device may be used with equal effectiveness, either as a feed or water receptacle—it is not, however, both at the same time, though its title might imply this. Patent No. 1,091,392.

OWEN FARMS

107 William St., VINEYARD HAVEN, MASS.

MAURICE F. DELANO, Prop. FRANK H. DAVEY, Supt.

Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.

ONE of the old-time breeders and judges of the Northwest, William W. Browning, of Ogden, Utah, has been appointed postmaster of his town. Thereby hangs a tale. Will is one of the few fellows in Utah that in and out of season has staid by the democratic party. In the lean years of democracy, when republican majorities would stay "put," the democrats had about as much show in Utah as rabbits do after the wheat field has been harvested. "Bunny" always finds a good nesting place before the wheat is cut, but when harvest turns up, Bunny is without a home. That has been the way of the Northwest democrat. He has strived, voted and done everything that a good democrat could, but when the vote has been counted he has always been minus a president. When the Bull Moose went on a rampage in 1912, then the long, lean democrats could see daylight for the first time in many years. As we said before, Will W. Browning staid "put." He was running a printing office down in Ogden. He had a yard full of chickens and a good housewife that always gave him plenty to eat, but with all that Willie was not happy. He knew that the democrats were entitled to win some time and he just staid "put" and none of his republican friends will begrudge him that post-office job in Ogden.

It was a long time ago when I first met Will Browning. I had heard of him for years. The year I met him he was the judge at Salem, Oregon, the great state fair of the Northwest. Will had been brought out at a "stupendous" cost to tell us fellows of the coast what constituted a good chicken. I, wanting to show the "Web Foot" chickenmen what constituted a good chicken, had gathered up from my own yards and the yards of the best around Tacoma a crew of chickens that numbered 84 birds. These chickens had cost us a lot of worry and some of us a lot of good dollars. It was in the nineties, when dollars looked as big as cart wheels and the express companies needed money as bad as the rest of us. I managed to gather up the chickens by agreeing with the owners that I would give them all the prize money, less the expense of entry fees, and other expense that it takes to make a big exhibit. I went down to Salem with fire in my eye. I believed that I knew just how good those Oregonians could raise chickens, as I had judged in several of their shows. I knew that Will W. Browning was to be the ribbon tier, so I felt safe. I had read some of Will Browning's dope. He was then trying to convince Will Sternberg that if he introduced the heavy feathered English Cochin blood into our American production that Buff Cochins would be a few days and full of feathers and that it would not be long before Cochins in America would be a "has been" and not a popular variety. He did not convince Willie Sternberg, but every old-timer knows that Buff Cochins in the average show are as scarce as 96-point pullets.

Willie Browning at that time also treated on buff color. He said that one could not get a solid buff fowl until they had bred black out of the tails and wings. He further said that one could make buff and white as a basis, but he doubted whether one could take a black tail buff and ever get a solid buff tail in any variety. This looked like sound reasoning to me, and I went to work on that line and have since that time produced Buff Rocks with solid buff tails but I bred buffs with white instead of black as an off color.

Having never met Will Browning, knowing that he was from Utah, I said on greeting him, "Glad to meet you. How many wives did you bring?" He said, "Only one this time, but I have had others." Then was the time when I kept quiet. I never, even to this day, found out what Will meant by "I have had others" and I have never asked.

Will Browning is one of the best poultry judges in the Northwest. He has had a way of always getting the right bird in the poultry show and giving the best of satisfaction where he has judged. Will ran a weekly paper once and at one time a poultry paper. During his years as an editor he stood in with the Union Pacific system and could get a ride to most any point on the coast, but that interstate commerce law got a hold of the railroads and from that time on we editors have been forced to put up the coin or we could not ride. There is one thing that the editors cannot understand, even to this day. The railroads in those good old days of passes would haul anyone for three cents per mile, and all of us editors for nothing. Since that time the traveling public has been made to pay three cents a mile and us poor editors had to come through also. We cannot see where the public has been benefited, but it's a "cinch" that we have been hurt. Such is reform.

The state of Washington, through Executive Commissioner Richard Seelye Jones, of the Washington Exposition Commission, has announced the appointment of Harry H. Collier as commissioner of poultry at the Panama-Pacific Exposition, to be held at San Francisco in 1915. The commission that was appointed by Governor Ernest Lister have recognized that poultry is one of the big industries of Washington. An appropriation has been set aside to duplicate all first prizes won at San Francisco by Washington breeders. Whether the commission will go any farther in the matter depends on what prize that the Panama-Pacific Exposition offers. The prize given at Seattle was ten dollars for first in singles and twenty dollars for first on pens. If the Panama-Pacific holds to these prizes, then the Washington appropriation will be large

We will make a specialty of day-old chicks, and will have an annual capacity of 150,000 chicks. We will hatch the following varieties: Black, White and Buff Orpingtons; Buff, Brown and White Leghorns; Partridge, Barred and White Plymouth Rocks; S. C. Rhode Island Reds, S. C. Black Minorcas, Anconas, White Wyandottes, Buff Cochins and Cornish Indian Games. White and Fawn and White Indian Runner Ducks. Our catalogue is now ready. For a copy please address
JOSEPH L. HESTON, Manager, TRENTON, OHIO

enough to pay second prizes, even if the Washington breeders should win twenty-five per cent of the premiums for which they compete. There has been some talk about paying for transportation of the birds to and from San Francisco, but this cannot be settled until we find out what the exposition management decides on as money prizes. A few days ago I had a letter from D. O. Lively, chief of live stock for the Panama-Pacific Exposition, to the effect that he would not appoint a superintendent for the department that would go on the pay roll until April, 1914. That he would not make any kind of appointment until after the meeting of the American Poultry Association. In deferring to the wishes of the American Poultry Association in the matter, Mr. Lively hopes to make the poultry show one of the big things of the fair.

———o———

Good Work With Woods House in Canada.

Editor American Poultry Journal:

In the April A. P. J. I see you have some notes on open-front poultry houses in cold weather, so I think that what follows will perhaps interest you.

We have had about the coldest winter on record here (Kingsbury, Quebec) and of the ten Woods open-front poultry houses in the neighborhood I have heard nothing but good.

I myself have a 12x18 ft. Woods open-front house, in which I have 40 R. C. Rhode Island Red pullets and ten old hens. The house is fitted with 16 "Ideal" trap-nests. Since Nov. 1st these birds laid 2,820 eggs up to March 31st, in spite of the fact that a number of the pullets moulted during the winter, having started to lay early in September, and several of the hens have passed the useful age (for winter laying, at any rate) being 3 and 4 years old.

In February I had 37 birds laying, which produced 453 eggs; 6 of these laid 20 eggs or better each during the 28 days. One pullet "A.68," laid 24 eggs in February. This one is a single-comb sport, so you see the cold did not bother the comb. The best record for the whole winter is that of "A.59," 114 eggs from Nov. 8th to April 20th.

The temperatures and egg production per day during February were as follows:

Date.	Minimum Temperature.	Number Eggs Laid.
1	15°	17
2	10°	11
3	— 5°	15
4	33°	16
5	—10°	21
6	—20°	15
7	22°	11
8	— 5°	16
9	21°	22
10	—20°	8
11	—45°	19
12*	—35°	18
13	—37°	14
14	— 8°	11
15	—15°	16
16	—23°	16
17	—31°	19
18	—25°	11
19	5°	14
20	—15°	19
21	—35°	21
22	—15°	8
23	—30°	21
24	—46°	18
25	—30°	18
26	17°	18
27	32°	20
28	10°	20

*On Feb. 12th it was 10° below zero at noon in the sun. The temperatures given are the minimum for the day, usually between 5 and 6 a. m., and are from the records of the Richmond County Electric Company's hydro-electric power station which is within 100 yards of the poultry house. You will see that there were 19 nights during which the thermometer registered below zero.

The hens were fed wheat, clipped oats and corn, equal parts by weight and fed in deep litter morning and evening. A little extra corn was given on very cold days. Dry mash of ground grains and bran in varying proportions was given containing about 15 per cent beef scraps. Also fed fresh vegetables at noon. There were no frozen combs or wattles among the hens, although there are several single combs in the house. There were four cockerels and two of them got their wattles slightly nipped. However, no attention was given to this and they were all right in a few days. The eggs from this pen ran 92 per cent fertile in April.

I see that you advocate no dropping boards in the Woods house. I did not find this plan satisfactory in this bleak climate where it is very cold and stormy. The hens seemed to be colder when there were no dropping boards and they would roost on the nest platforms. As soon as I put in dropping boards I had no further trouble.

J. W. Danfield.

Kingsbury, Quebec, Canada.

[Note.—We are very glad to have this report and it will interest many readers who have asked about the practical use of the Woods open-front poultry house in extremely cold climates. Here is a report of excellent egg yield, apparently not influenced by the extreme cold, and of fine health and condition of an open house flock during 19 days of below zero weather when the temperature dropped as low as 46 degrees below. The recommendations for dropping boards in cold climates are worth noting. The Woods open-front poultry house is fully described and working plans given in the book "Open-Air Poultry Houses for All Climates," and obtainable of our book department at 75 cents a copy, postpaid. We hope more readers will send in such interesting reports of practical experience with houses and poultry equipment.—Editor A. P. J.]

———o———

With hens laying an average of 150 eggs each a year, which is a higher average than flocks generally maintain, although often reached when fowls are cared for in small numbers, it would require an addition of at least 62,400 laying hens to produce the 65 car loads which the Inland Empire market wants but does not get locally. Here is room for expansion on the practical side of the poultry industry that ought to look good to the man with experience and a special aptitude for the business.

"THE TEMPERAMENTAL LEGHORN."

THE temperament or disposition of a Leghorn is the thing that very largely influences the bird's chance of winning in the show room. This fact has been generally overlooked by the average small breeder and exhibitor.

The American Standard of Perfection gives no value to this important quality, yet it probably influences the judge as much in making his awards as any one thing. There is many a bird that appears a fine specimen running in the breeding yard, or on a free range, but put this bird in an exhibition coop and a great change comes over him. He does not show himself to advantage, carries his tail and breast at a different angle, ruffles up the feathers of his neck, tries to get out of the top of the coop, and failing to get away, settles in a corner and shows that he has no desire to hold any intimate relations with man. He does not want anybody to touch him or even look at him at close range. This is an extreme case, but we find this disposition in varying degrees. There are birds that at first appear wild that can with perfect handling be educated into well behaved birds, then there are birds that the first time you put them into a show coop behave perfectly, and there is the before-mentioned bird that shows his fear of any intimate relation with man and no influence can change him. Not only does temperament affect the chances of a bird's winning in the show room, but this disposition is also transmitted to their progeny. In fact, I think disposition is more surely to be transmitted than is shape or color. Many times a novice or beginner in the breeding of exhibition birds goes to visit some large poultry show, looks over the birds carefully and makes up his mind that he has some in his yards that are just as good. He enters them at some show, giving little or no thought as to how the birds will behave in the coop. He probably gets a Standard of Perfection and carefully studies description and scale of points as applied to his particular breed. Now the bird that is a fine actor in the show coop, and is also a good all-around specimen, is extremely rare. Nobody gets very many of them by chance.

M. L. CHAPMAN.
Manager of the breeding and exhibition department of the Rancocas Poultry Farm, Brown's Mills, N. J.

The way to increase this desirable disposition in your flock is to eliminate from your breeding males each year all birds that do not show a desire for the companionship of man. As you stroll along a row of breeding pens you will find occasionally a male that will come down to the fence and will stroll along with you, apparently trying to talk to you and showing every evidence of wanting to get acquainted and that he likes to be noticed and paid attention to. This is a very valuable quality, as it shows that the bird has adapted himself to domestication. Not only is this valuable in the show bird, but is just as useful in a utility bird. Birds that are frightened or that are disturbed or excited do not lay as well as birds that are perfectly quiet. A flock of birds that have been bred with an idea of quiet disposition are not easily frightened. The attendant or stranger can go about them without exciting them in any way. It will always be easy to get these birds to do what you want them to do. A few more eggs from a large flock of hens means a large sum of money. Running over several years this means the difference between success and failure. You can not afford to overlook the question of temperament in your breeding. By paying attention to this, in the course of three or four generations, practically all your birds will be of such a disposition that you can take one of them up at any time and put it in a show coop, and it can be at once posed and it will show off at its best.

Birds of the American class are for the most part naturally quiet and will pose nicely with training. With the Mediterranean breeds it is a different matter. A great many flocks of these are extremely wild. Leghorns, as a rule, require more time spent on their education. The best way to handle a male that you wish to exhibit is to take him off the roost at night. You can then get him without exciting him very much; put in an Empire exhibition cage and leave alone the first day. Let him look the cage over and find out that he can not get away. Next day take a hen that has previously been coop trained and is quiet, put her in with the male. Then several times a day feed her a little out of your hand. The male will soon begin to evince an interest; as a rule, he will soon come up and eat with the hen. When he does this you have partly got his confidence, and you will gradually get him so that you can handle him and pose him. This takes anywhere from a week to a month.

Now, you can not expect the birds to stay in a show coop all this time. Along in the fall, when we are handling a lot of birds, we cage up forty or fifty males every night, put them in Empire coops, fuss with all of them, and the next morning about 10 or 11 o'clock put them all back in their pens. In this way they do not get stale and gradually acquire a show room demeanor that adds at least 50 per cent to the probabilities of their becoming winning birds.

There are quite a number of birds that can never be trained. A bird that screams at the top of his voice every time you take hold of him and that seems to go into hysterics if you just look at him closely can very seldom be broken to amount to anything. I have worked for three months on an especially promising bird, finally getting him so that he would behave quite satisfactorily for me. When he was put

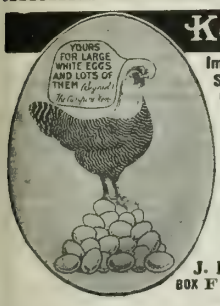
into the show room in strange surroundings with strange people walking by, and when a strange judge came up to examine him and take him out of the coop, he simply went to pieces, forgetting everything that he had been taught, and acted like a regular fool, not getting a second look from the judge and all the ribbons going to birds that he could easily beat if he had stood up and faced the music like a man. I have often thought that in our scale of points that there should be some value given to the temperament or disposition of the birds, because every judge does consciously or unconsciously give great value to it, and it is something that the beginner does not get a line on for a long time. The success of the leading exhibitors is largely due to their knowledge of this. I might also add that this explains to a certain extent why birds that the leading breeders send out to be shown in strong competition cost so much. You are not only paying for the bird but you are paying for a certain amount of time that has been spent handling and educating the specimen.

M. L. Chapman.

Brown's Mills, N. J.

A WORLD'S POULTRY CONGRESS.



HIS Excellency, Mynheer Greub, Netherlands Minister of Agriculture, has given through Mr. Edward Brown, F. L. S., president of the International Association of Poultry Instructors and Investigators, on behalf of his government a cordial invitation for holding the first World's Poultry Congress at The Hague in 1916. This invitation has been unanimously accepted by the council of that association, at whose preliminary meetings held in London nearly two years ago a resolution was passed that such congress should be held every three years. It was originally intended that the first should meet in 1915, but at the request of the Dutch government it was postponed until the following year.

No more suitable country could have been chosen for a gathering of this nature than Holland, where of late years great developments have taken place in connection with the poultry industry, presenting special features not met with elsewhere. The central position of The Hague and the facilities found there for holding international gatherings are so abundant, make the choice exceptionally favorable.

In due course official notification and invitations will be issued by the Netherlands ministry through the regular channels. Meanwhile, it may be intimated that the first World's Poultry Congress will deal with every side of the industry—breeding, production, hygiene, education, research and trade. It is hoped that in many of the leading countries committees will be formed to coöperate with an executive committee which is in process of formation.

Back Numbers Wanted.

The Librarian of Congress, Washington, D. C., is very desirous of securing a copy of the December, 1911, and November, 1912, issues of American Poultry Journal to complete the library files. Any of our subscribers who has either one of the above numbers to spare will confer a favor on us by sending them to the Librarian of Congress, Washington, D. C., or direct to this office.

Aldrich White Orpingtons.

Aldrich Poultry Farm, 5075 N. High St., Columbus, Ohio, are having a special egg sale. They are offering their Quality eggs at such great bargain prices that you cannot afford to pass this by without sending them an order. To every customer purchasing eggs from them to the amount of $5.00 during the balance of season they will send a copy of their booklet entitled "From the Shell to the Show-room." This tells how the birds are hatched, fed, mated and conditioned for the show-room. After June 1st this firm will offer a number of choice birds at half the prices quoted in their catalog. They are doing this to make room for their young stock. Now is the time to write them for special reduced price list. They guarantee to please.

White House Strain S. C. White Leghorns.

It is with great pleasure that we call our readers' attention to the ad of the White House Poultry Farm, located at Hammonton, N. J. We have just received one of their handsome catalogs, a copy of which will be sent free for the asking. They guarantee their stock as represented and treat all customers fairly and honestly. If in need of stock, eggs or baby chicks in S. C. White Leghorns, write them.

Ferris Improved White Leghorns.

Geo. B. Ferris, Grand Rapids, Mich., has advised us that he now is offering laying, breeding and exhibition stock for sale at greatly reduced prices up to August 1st, 1914. He is also making a great reduction in prices of hatching eggs and baby chicks for June. Write for his special summer price list. It's free for the asking.

Warren's Reds.

Special bargains for June in Warren's Reds, stock or eggs. Prices cut to one-half. Write Bell-Vista Farm, Mentor, Ohio, for price list and catalog.

Mr. A. B. Moe, of Chicago, thinks he has invented the "last cry" in feed hoppers, for he has constructed one on a principle hitherto unused, with a gradual enlargement toward the base, which in itself is sufficient to prevent the feed choking but with the added precaution of a neat contrivance, which is set in vibration by the chickens feeding, also tending to force the feed downward. The trough is ingeniously constructed, with every safeguard placed to prevent the birds throwing out and wasting the feed. It is constructed of galvanized iron, and both rat proof and rain proof when closed.

This makes one more useful article added to Moe's already well known line of high class poultry appliances and is manufactured in three sizes, at very low prices. Write Otis & Moe Manufacturing Co., Otis Bldg., Chicago, for full description, and complete catalogue.

Any of our readers interested in S. C. Black Minorcas, the great all winter layers, will do well to write to Charles G. Pape, Ft. Wayne, Ind., for a copy of his reduced price list on stock, eggs and baby chicks. You can save money by ordering now. Mention A. P. J.

E. A. Webb, Ewing, Ill., will sell some of his fine Blue Wave Barred Rock breeders and some fine show specimens at one-half price now. See ad elsewhere in this issue and write him for prices.

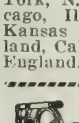
A New Poultry Doctor Book.

On page 911 the Cyphers Incubator Company, Buffalo, N. Y., announces the publication of a new, up-to-date Poultry Doctor Book which will be ready for mailing this month. This book is the third of a series of popular hand books published by this company and we predict for it a great demand.

The practical poultryman prefers to prevent disease rather than to doctor sick birds and special attention is given to prevention and sanitation in this book. Every one who wants to keep his fowls in the best possible health and his buildings and yards free from infection will find this book a thoroughly reliable source of plain, common-sense, dependable information. When diseases must be treated, full direction for doing so will be found in this book and the simple, labor-saving "Cyphers Method" of doctoring sick fowls will be of interest to all. Special attention is given to the diseases that cause the heaviest losses in the poultry yard and the very latest information is given on such puzzling questions as white diarrhea in chicks, cholera and roup in fowls and blackhead in turkeys.



CUT

The "Cyphers Company Chart of Poultry Diseases and Remedies" is published for the first time, in this book, and it will

prove of special value to the busy poultryman. In this chart the common symptoms of different diseases are given, also their names, the proper treatment and most effective means of prevention—all arranged in four parallel columns, thus making it a simple and easy matter to diagnose diseases with certainty and learn the proper treatment—and to do this in a moment's time.

The "Cyphers Company Poultry Doctor Book" contains 32 large pages, is well illustrated and attractively bound, and should be in the library of every poultryman. The price of the book is 25 cents, but the Cyphers Incubator Company has arranged to mail a first-edition copy free to every subscriber who sends in his application promptly, mentioning this paper. Send for your copy today, writing direct to the Home Office of Cyphers Incubator Company, Buffalo, N. Y., or address the company's nearest branch store, as follows: 12-14 Canal St., Boston, Mass.; 41 Barclay St., New York, N. Y.; 329-331 Plymouth Court, Chicago, Ill.; 317-319 Southwest Boulevard, Kansas City, Mo.; 2127 Broadway, Oakland, Cal.; 121 Finsbury Pavement, London, England.

PARTIAL VIEW OF THE LAYING AND COLONY HOUSES ON THE FARM OF J. W. PARKS, ALTOONA, PA.

Bred-to-Lay Barred Rocks.

A mammoth plant devoted exclusively to the breeding of Quality Layers, the practical poultry question, eggs and meat with profit. J. W. Parks, Altoona, Pa.

The impressive features first and last noted by the visitor to the home and yards of Mr. J. W. Parks, breeder and originator of the Parks strain of Bred-to-Lay Barred Plymouth Rocks is the general business air and system in every department and branch of the plant. In the hen house, the buildings, nests, yards and stock all show care, also the general arrangements of buildings. In the incubator cellar, brooder house, office, etc., it is all the same. The system has been worked out and is closely followed by all from the "Boss" down.

Since our last visit to this plant two years ago many changes have been made. New houses have been built, others enlarged and withal they are still today barely able to keep up with the demand made upon them for breeding stock, hatching eggs and day-old chicks. Mr. Parks is up and doing and planning more improvements. He is a "live wire," a man of many and broad ideas and we point to him with special pride for what he has done and accomplished for better poultry.

We believe the real originator of this line was Mr. Joseph R. Parks, Sr., father of Mr. J. W. Parks, at least we know this line has been bred by father and son for about 30 years with the one special quality of bred-to-lay in view. While laying quality is the special aim today Mr. Parks, by careful selection, has also improved his birds and kept them abreast of the times, and during this last season they have been exhibited in five states, making records of worth and winning special favor at each show for their sturdiness and general quality. Exhibiting eggs has also been one of Mr. Parks' favorite ideas and he has won East and West on exhibits made.

From records shown us by Mr. Parks we could fill pages with accounts of laying records made by his birds, both at his own place and also by those sold whose records were sent in by customers. In this line Mr. Parks handed us between 400 and 500 letters received within a year from customers telling of their success with his stock and of their laying quality, but space forbids, still we wish to refer this, as it is one of the best recommends we can give, the man that pleases customers as Mr. Parks most evidently does is worthy of every consideration.

The stock as seen by us at this plant is easily 25 per cent improved in feather since two years ago, in form they are extra, the fine long backs and bodies, well carried and good heads promise much. They are built like layers and look the part expected from them. The males average good size, are deep and full, with good length; the females are above the average in size, long and deep. Health and vigor are plainly seen while their houses and conditions are of the best to insure results.

The poultry houses are of the "colony" plan. Each has a roosting and scratching compartment. They are set in long, double rows and each has a large yard running down to an unfailing creek. Poultry will never do well if they are not at their best under these conditions.

In the incubator cellar are two mammoth machines with a capacity of 23,500 eggs every three weeks. Several compartments were hatching when we were there and we could not help but note the strong, large fluffy chicks produced. The brooder house connects and a skilled man is in charge here who surely is producing the goods.

Mr. Parks has issued a new catalog that is well worth having and reading, for it is brimful of good stuff from cover to cover. His article therein, "Building a 200-Egg Strain," is particularly valuable, as are also other articles.

This is a plant of progress with prosperity evident. It is the result of successful labor and Mr. Parks is entitled to every credit. He has demonstrated that careful breeding and selecting produces greater layers, and he has also proven that there is a demand for special quality layers.—H. P. Schwab.

S. C. White Orpingtons.

We have lately received four letters from breeders who have bought either stock or eggs from Mr. and Mrs. P. A. Demgar, Brown Station, N. Y., who highly compliment them for the quality and general treatment received from them and we are glad to give this special mention, and trust it may further benefit Mr. Demgar.

We first met this party and saw their line of birds at the last New York State Fair, when in a great class of birds they

WHAT OUR CUSTOMERS SAY

W. F. Frase, E. Akron, O., writes:—"I get four eggs a day from four females in the pen you imported for me."

Carl Ferguson, Indianapolis, says:—"Eggs arrived in fine shape."

Grey de Rutlege, Northfields Ranch, Roundup, Mont., who is back and forth from England several times a year and breeder of several varieties, says:—"Sussex have proven by actual test, the best winter layers I have ever handled."

Dr. C. P. Linheart, 350 State St., Columbus, O., writes:—"Eggs came yesterday. Only one cockerel in lot. A nice looking lot of eggs, larger than the average."

Satisfaction Guaranteed RED SUSSEX FARMS Myron W. Mills, Prop. H. H. Coburn, Mgr. Marysville, Mich.

PARTIAL VIEW OF THE LAYING AND COLONY HOUSES ON THE FARM OF J. W. PARKS, ALTOONA, PA.

won about all the first prizes and several others with a beauty line of stock that showed the highest quality and the best of care, a line we were pleased to recommend at the time and one that has had a grand good season. These birds have size and bone and are unusually white, full of vigor and vitality.

Mr. Demgar now writes us that he has several breeders to spare at from $2.50 to $5 each, and for the balance of the season they will sell eggs at $1.25 and $2.50 per 15. Here is the breeder's opportunity to buy reliable goods at most reasonable prices.—H. P. Schwab.

Captain Max J. De Bathe, Hartley Court, Reading, England.

We are in receipt of a letter from Captain Max J. De Bathe on his return to England from Burmah, where he has been hunting and had succeeded in shooting a 9-foot tiger. From the New York show, where the Captain has exhibited for two or three years and also has been one of the judges, he returned to England and since has been most around the world on a shooting and pleasure trip and from the tone of his letter we believe he has had a most enjoyable trip

But with all in view most of his letter is devoted to poultry and he reports an extraordinary fine and large crop of youngsters coming fast and good. To the American breeders Captain Max De Bathe is best known as a Blue Orpington breeder and we believe he was the first to export them to this country, and also to exhibit them here at the Madison Square Garden, New York, show. After that he judged them at New York and since has again been an exhibitor, and has yearly attended the New York show.

Beside the Blue Orpingtons Mr. De Bathe also breeds Black, White and Jubilee Orpingtons, Silver Campines, Buff Orpington Ducks and White Turkeys. Note his change of ad and write him your wants.—H. P. Schwab.

New Sixth Edition of Rankin's Duck Book Just Published.

Every duck breeder everywhere needs a copy of the enlarged and revised sixth edition of "Duck Culture," written by James Rankin, recognized as America's greatest authority on duck growing for almost a generation, who is now over 80 years old.

This book is now off the press and ready for distribution. In this new editon, containing over 100 pages and fully illustrated, Mr. Rankin takes the duck grower by the hand and leads him along the practical paths to success and larger profits.

"Duck Culture" is not a book of theories, but tells how to get the best results with the least possible labor and waste. In it the author covers not only every conceivable point about breeding, feeding, mating, housing, incubating and marketing every variety of ducks, but he also describes fully his famous feed formulas, house plans and his home treatment of diseases.

Five editions of 10,000 copies each of this valuable book have already been published and as the name of James Rankin has been associated with duck raising for so many years, there is a big demand for copies of this sixth edition. By special arrangement with the publishers, The A. D. Hosterman Co., of Springfield, Ohio, publisher of Poultry Success, who has been fortunate in securing the publishing rights of "Duck Culture" from Mr. Rankin, we can offer this book to our readers for only 75 cents a copy or $1.40 with a year's subscription to American Poultry Journal.

Eastern Breeders' Notes.

By H. P. Schwab.

Note ad of the Rancocas Farms. They offer a large line of their prize winners for sale in White Rocks and S. C. White Leghorns. In this special sale are included many noted winners. This line is too well known to require special mention at this time; suffice to say Mr. Reese V. Hicks is the general manager and Mr. M. L. Chapman superintendent of poultry. When at these farms lately we were surprised at the amount and quality of their stock. It is a dependable line, and we are pleased to recommend it. Look up their ad and write them your wants.

The Manhattan Farms, Brighton, N. Y., Geo. E. Noeth, owner, have been putting out some very nifty advertising. Well, they also have the class in Silver and Golden Campines, as their winnings at New

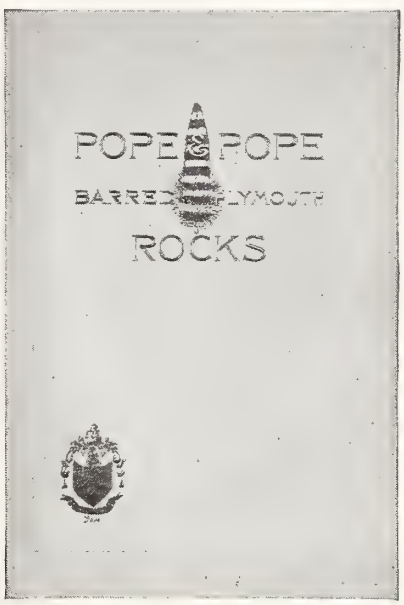
York, Boston, Philadelphia, Hagerstown, Buffalo, etc., show.



The Orpingtons of Wm. Cook & Son, Scotch Plains, N. J., are ever popular, and more so now than ever. They are the originators of this variety, and at this time are offering special inducements on breeders.

Webster Farm, Girard, Pa., like others, have a special mid-season sale of their White Rock breeders. This is the New York champion line. This past winter at Washington, D. C., they won all first prizes. You will make no mistake if you have this line.

The Niagara Farms, W. R. Curtiss & Co., Ransomville, N. Y., have what you want in day-old chicks, eggs for hatching or breeding stock. They breed Pekin ducks, Reds (both combs), White Leghorns, White Wyandottes, White Rocks and Runner ducks, fawn and white. They also put up the famous "Niagara" brand of cut clover. Write for catalog and prices.

Pope and Pope, Louisville, Ky., Issue Beautiful Barred Rock Catalog.

A catalog, which is expected to hold the reader's attention, must first of all be attractive, it must also contain arguments that will leave an impression on the prospective customer's mind. It must further show up the goods, the place and the men behind the enterprise in such a clear and convincing manner that the recipient will have the utmost confidence in any business transaction he may wish to enter with them. Such a catalog as described above is the one Pope and Pope, the well known Barred Rock breeders of Louisville, Ky., have just issued. Printed in gold bronze and black on a gray cover stock and embossed by the hot die

method the book is without any doubt one of the handsomest that has come to our desk in the interest of Barred Rocks.

The inside printed in art gray and black on the finest of stock, gives an unusually artistic appearance. The book is profusely illustrated and shows the plant and the birds up in fine shape. The text tells the prospective buyer what he wants to know. A mating list attached to the back cover of the book describes many pens of their fine matings. Summing it all up we say without hesitation Pope and Pope have issued a most beautiful Barred Rock catalog, giving all the information the buyer wants to know. The plant is owned by these well known, reliable people. The stock they sell is worth the money and the condition under which it is raised could hardly be improved upon. Convince yourself and send for this fine book. It's free. Address, Pope and Pope, Louisville, Ky., Box A.
